Dear Professor GRO-B

Re: GRO-B (GRO-B 37)
GRO-B

GRO-B Hepatitis C phenotype is 3a which is one of the genotypes for which Interferon is satisfactory. He has a titre of 4×10^6 HCV which I understand means that he would be suitable for Interferon therapy. He has a mild transaminitis of 65 with a gamma GT of 120.

Yours sincerely,

GRO-C

AUDREY A. DAWSON
Consultant Haematologist
