Clinical Comments:

Diagnosis: Haemophilia

Chronic Hepatitis C (Sustained Viral Response with Anti-viral Therapy)

I saw your patient in the liver clinic. I am glad to say he is feeling well. He did struggle with his anti-viral therapy but ultimately he has achieved a sustained viral response. Quite rightly he raised questions regarding whether this could be regarded as a guaranteed cure of his condition and obviously the answer to this is no. However it is about as close as we can get to being certain that he has cleared his infection.
