Dr. **GRO-B**

GRO-B

Dear Dr. **GRO-B**

RE: **GRO-B** DOB **GRO-B/74**

I reviewed this 18 year old severe haemophiliac (factor VIII level less than 1 iu/dl) at the Haemophilia Clinic on 23.6.92. He recently sat 2 Highers and awaits the results and he has now finished at school and is applying for office or laboratory jobs. I note he has a mobility allowance and continues on home treatment with Factor VIII concentrate with which he has had no problems. He continues to bleed approximately fortnightly, usually into his hands while walking the dog. His ankles are in good shape. He saw the dentist 2 months ago and does not require any treatment at present and he has a bleeding disorder's card. Physical examination was unremarkable apart from some crepitus in the left knee. I explained to him that later this year we shall be replacing the current intermediate purity Scottish factor VIII concentrate with a new high potency concentrate and we will send him information on this and consent to inclusion in the clinical assessment trial. We checked his usual bloods and will write with the results. We are still looking into the possibility of obtaining some Interferon for treatment of chronic hepatitis. He will continue to be reviewed 6 monthly at the clinic.

Yours sincerely

GRO-C

Your Ref. GRO-B

22nd March, 1993.

Ms Janette Murray,
Civil Service Occupational Health Service,
18-20 Hill Street,
EDINBURGH EH2 3NE.

Dear Ms Murray,

Re: GRO-B

Date of Birth GRO-B 74.

I have to thank you for your letter of 17th inst. regarding the above.

GRO-B has been a patient in our Practice since birth. His father is a policeman and was a neighbour of mine for many years. On looking up GRO-B records, he was last seen in the surgery in March 1990 when he required to have his ear syringed.

He appears to be totally in charge of his own treatment for his haemophilia and is a very independent young man.

Over the past 18 years he has seldom been seen at the surgery.

I enclose a photocopy of his last two hospital reports which may be of some assistance to you.

From the job description enclosed I feel he should be able to cope for at least five years however I am not up-to-date as to the long term prognosis.

Yours sincerely,

Dr. GRO-B
