Dear Dr Li

Re: Vincent Baker - DOB: **GRO-C** Hosp No: P730079

GRO-C

Many thanks for the referral of this 45-year-old gentleman who has hepatitis C genotype 3a and has got evidence of decompensation. We reviewed him and he underwent transplant assessment in the context of a recent chest infection.

He does not have any major contraindications for consideration of transplantation.

We were unclear as to his degree of synthetic decline and noticed his hyponatraemia which improved with cessation of his diuretic therapy. In addition, on maximal CPEx exercise, he did demonstrate some lateral ST changes.

I will send him an appointment for review in my clinic in four weeks time where we can repeat his parameters and his clinical status with the view to consideration of listing with antiviral therapy or treatment with Pegylated Interferon with a backup for
