<b>Height:</b>	162 cms
<b>Weight:</b>	64 kgs
<b>BMI:</b>	24
<b>Blood Pressure:</b>	152/92

**Physiotherapy Report**

Annual musculoskeletal assessment was carried out. His main problems remain with both ankles and his right hip. He has had some loss of range of movement in his right hip since his last assessment. Despite this he continues to enjoy fishing where he can. He has been advised regarding activity modification and the use of a stick, as required, to offload his hip. I will see him again at his next clinic review.

Signed: Fionnuala Sayers

The above named was reviewed at the Haemophilia Clinic today and has been in relatively good form since his last review with no documented spontaneous or provoked bleeds in his current prophylactic regime. He has discussed with the physiotherapist today challenges in relation to his right hip which are certainly noted on watching him walk from the waiting into the consultation room.

Belfast City Hospital, Haemophilia/Thrombosis (C) Clinic, Lisburn Road, BELFAST, BT9 7AB  
Tel: GRO-C

Contd.....

We have discussed with him the current treatment for Hepatitis C and the need to be reviewed by the Hepatologist. He has declared the fact that travelling to Belfast is difficult and as such we have discussed it with our Social Worker that as and when an appointment is made we will do our best to arrange for transportation to get him up to the hospital to be seen.

As things are otherwise satisfactory routine bloods have been checked and he will be reviewed in 6 months.

Yours sincerely

**Dr Gary Benson MB BCH BAO FRCP FRCPATH**  
**Haemophilia Centre Director**
