Dear Dr Stone

RE: SEAMUS CONWAY, GRO-C CO LONDONDERRY, ,
GRO-C DOB: GRO-C 1973

Diagnosis: Severe haemophilia A
Hepatitis C
History of chronic alcohol abuse

Your patient was reviewed at my haemophilia clinic in Altnagelvin today and it was a pleasure to see him as his attendance as you are aware had been more than suboptimal.

His main issue has been ankle oedema which may be related to the fact that he has significant calf muscle wasting or indeed the status of his liver disease. There are healing ulcers in relation to the left malleolus as well as the forefoot.

These appear to be infected. With regards to this joint disease he was assessed by the haemophilia physiotherapist today. Seamus follows an on demand treatment programme with 2000 units of ReFacto as and when he requires it. Given the fact that he has been able to attend the clinic today we are now able to monitor his blood levels to ensure that he is not having any further complications from his haemophilia and we will be able to alter his management programme accordingly.

We have as always encouraged Seamus to continue with his 6 monthly review appointments and on going assessment so as and when he requires our help that he is seen to be compliant with the advice which we give him.

Belfast City Hospital, Haemophilia (C) Clinic, Lisburn Road, BELFAST, BT9 7AB

Routine bloods have been checked at the clinic today and we await these with great interest.

Yours sincerely

Dr Gary Benson MB BCH BAO FRCP FRCPATH
Haemophilia Centre Director
