Diagnosis: Severe haemophilia A

The above named patient suffers from severe haemophilia A, and is currently under the care of Dr Anderson at the Haemophilia Centre, Belfast City Hospital. He is immune to hepatitis A, has been vaccinated against hepatitis B but is currently hepatitis C positive. We continue to monitor him from this point of view with alpha feto-protein and liver function test done at each review appointment. These are holding stable. Dr Anderson would very much appreciate your on-going assessment and intervention as regards the hepatitis C status.

The patient himself is very keen also to be reviewed by yourself. Thank you in advance for your assistance.

Yours sincerely

GRO-C
