## M E M O R A N D U M

TO: P Foster cc. R McIntosh	FROM: R J Perry
SUBJECT: S(8) Clinical Trial Batch	DATE: 27 February 1990 REF: rjp/kg KR000934.020

I refer to Ron's memo of 21 February. We simply do not have the time to accommodate further delays to this development programme. It is now substantially delayed and there is clear evidence of patients being transferred to commercial product in preference to Z8. Z8 is now obsolete!

Ron's comments are something of a counsel for perfection and do not amount to a substantive case for further delays. We should also recognise that for this particular batch of product, yield is not an important issue.

Supply for Z8 is now secure and thus scheduling is not a problem - can be done any time from a production point of view.

Please arrange for S8 batch S8(007) to be run as early as possible in March and advise me of the selected date.

Thanks.
