Dear Frank

SUCROSE IN FVIII

Many thanks for your prompt and helpful response to my question.

I learnt after I had phoned that Sandoglobin IV contains sucrose as stabiliser at a level of 50 g/l which is about what we may want in our FVIII product.

We now know that this product is licensed for hypogamma treatment which gives some confidence that the chronic use of sucrose at levels of 3-5% should not cause any major problem.

Thanks for your help.

With kind regards.

Yours sincerely

R J PERRY
Director (Acting)
