SNBTS STOCK OF FACTOR VIII
SUMMARY

29 JANUARY 1990

1 PFC STOCK

Stock of Z8 at PFC has dropped in January to about 1.25 million IU. This is due to a problem with the heating facility which has resulted in build up of material at this stage. This has been resolved and stock will increase again over the next month. In addition, I have been advised that there are several batches which have completed QA testing, but which are not yet signed off.

An extra line has been added to this graph this month. This shows the projected target stock build up according to the published plan (starting at 2.0 million IU in March 1990 and increasing to 5.0 million by March 1991). Stock is clearly below this planned level.

2. RTC STOCKS

No problems. It should be noted that the three Northern Centres are all approaching their re-order level and will receive a batch in the next month or two, depending upon demand in the current month.

The two larger Centres continue to hold stocks above their Re-order level.
