Dear

NEW GENERATION HEAT TREATED FVIII (68°/24 HRS)

We have now nearly exhausted our stocks of the original heat treated FVIII (68°/2 hrs) and PFC will be issuing new generation material in the near future. Therefore, you can expect to receive consignments within the next two months of the "new" product at a level to maintain the system of batch dedication.

We have modified the packaging for the new product and changed the product name to Anti-Haemophilic Factor - Factor VIII - HT - Lyophilised in order to differentiate old from new. The leaflet insert has also been modified slightly to include the method of heat treatment.

I enclose examples of the new packaging etc for your information in advance of supplies.

With kind regards.

Yours sincerely

R J PERRY
Director
