Dear Dr Innes

Perry EVANS - GRO-C:61

GRO-C

Diagnosis: Mild haemophilia A

I saw Perry for review at the Haemophilia Centre recently. Generally his health is good. He has required little factor VIII recently because he has not been playing football during the last few months.

On examination he looked well, weight 72 kg. Blood pressure 130/80. He still has minimal lymphadenopathy palpable at both axillae and bilaterally in the posterior cervical triangles. Examination of the chest and abdomen was normal.

Investigations

Haematology normal apart from a reduced white count at $3 \times 10^9/L$.

Biochemistry: He has evidence of fluctuating aspartate transaminase levels presumably due to chronic non A non B hepatitis.

Immunology. A moderately reduced lymphocyte count at $1.1 \times 10^9/L$ and total T helper count of $0.4 \times 10^9/L$ (normal lower limit $0.6 \times 10^9/L$).

In conclusion Perry is well at the present time. He has regained his previous weight loss but still has persistent lymphadenopathy. We have arranged to see him again in 6 month's time.

Yours sincerely

GRO-C

CLINICAL NOTES

7.2.85

Haemophilia diagnosed at age 3 after cut lip bleed for days. Still 27 thought to be "battered" because he was covered in bruises. Two of grandfather's brothers died of bleeding.

Family tree:

GRO-C

GRO-C

Treated at Haslemere Hospital between age of 7 + 14. was treated about once a month, some bleeds required more than one treatment. First treated with cryo. severe skin reactions at age 12, changed to concentrate. on home treatment for past 8 years. Treated with Factorate. Intrately injections were given by G.P. who lived out door, treated himself from 1979 on.

social Normal school life missed few amount early on because of bleeds. 2 A. levels. Mechanical engineering degree from Kingston Polytechnic. Now "software" engineer. would like to do outward Bound training. Played football. Lives - own flat. Father died in 1979. Two married brothers. General health No history of jaundice. Allergies to house ants - skinning nose + eyes. Desensitizing injections helped a little. Occasional paracetamol. No other medication. Dismissed A.D.S., Disposed of treatment materials etc.

8/6 wt. 72-6 Kg, B.P. 120/80 Home

Chest clear

Abdomen NAD

No lymphadenopathy.

Area of eczema left groin + medial side of thigh - seeing G.P. Has had eczema - the past. Father had psoriasis.

Blood samples for Fbc + T-cults
LFT's + immunoglobulin
Autoantibodies + complement
Hb, Ag + Ab.
UIC PT + storage.

If Hb, Ab negative to have key B vaccine.
Immed with heated heated Amman cone. syringe, needles
treatment starts etc.

Review 6/12.

2/5/85

See for unwarmed examination.
Had a bad attack of bronchitis 2/12 ago which needed 2 courses of
antibiotics to clear? which antibiotics
Now fit + well.
Runs 7 miles at a time (which sometimes makes his knees ache)
Plays football.
Needs treatment about once a month.
Has small hematoma + large graze on rt. shin after a football
injury - treated with 500 + Vit.
OK Joints large but not inflamed.
Teeth need attention

3 enlarged lymph nodes right side of neck post. A
1 apex of right scilla

Clot clear
Abdomen NAD

Joints full range.

Graze 5cm x 3cm over small hematoma + jelly bruise lower
half of right shin.

Blood samples for Fbc, LFT's, Uric studies, diff count + T-cults

3/12 by review

GRO-C

2/1/85

Review

Treated case with one bottle of heat treated Amman cone. 4/5/82
ago for break on left ankle which swelled + became painful.

General health good.

Visited dentist 7/16/85 - one small filling.

Diarrhoea 2/12 ago before + during a 10 mile run - continued
for 3-4 days. Treated by G.P. with sachets which appeared
to help. (local G.P. sees his wife here in Edinburgh)

3-2-86. Review:

Twisted R foot playing squash 1 week ago; took 1 week V11
on 3 successive days - last 2 days ago. Swelling gone
down but still has some pain.
Before that, last knee 3 months ago.

General health: OK. Still seems unable to coddle.

Continues to work for Marconi as software engineer.

Lives with 3 friends. They & employer know he has
homophobia: no problems.

'No sex with anyone, male or female' - 'wouldn't
have sex outside marriage, anyway, so no problem'.

Off. Looks well

Wt steady 72.9 kg
Tonsils large but not inflamed. Mucosa OK.
No thin rods.

2 1/2 cm nodes R. post trachea. 1 1/2 cm node
L axilla. Non tender.

EP 120/90 P 80 only. Chest / Hx ok.

Bringing lat side R foot & some swelling. Movement
painful.

No more V11: + reduce activity till foot resolved.

Full screen including anti-HIV check.

See 3/12 (although not really classifiable as ARC)

Right foot still painful along lateral border.
Tender over base of 5th metatarsal.

X-ray to exclude possible fracture

No evidence of bony injury.

Advised to wear elastic support & reduce activity (this was unlikely as he has not done so before)

GRO-C

24/3/36

Review

Rt. Foot recovered slowly over 10-14 days after last visit. Still slight pain on extreme inner border but no limitation of normal activities.

Completion of lower procedure at Withford this week.

Still working at Marston - some days - Rotherham on 10 week training course.

General health good apart from occasional sore throats. Continued to play cricket & taking part in an amateur production of "The Boy Friend".

Last month had a headache for 4-5 days, treated by G.P. with paracetamol. Think it was due to overwork & stress.

Discussed Hep B vaccination - would like to be vaccinated.

Wt. 72.9 kg,

B.P. 140/90

Mouth clear. Tonsils large as usual.

Dear Mr Evans

I understand that you are aware that members of your family in GRO-C have requested carrier studies and that the doctors in Wales require a sample of your blood for the study.

I have been asked to collect the sample and send it to Cardiff. I would be grateful if you would arrange to come to the Centre to donate a small sample of blood as soon as possible, preferably not at the end of a week.

Yours sincerely

Dear Dr Miller,

This is to confirm that I will be attending the Royal Free on 4.12.86 at 9.00pm.

I have recently split up with my girlfriend Ros Leask so she will not be attending at this time.

I would be grateful if you could inform the other Mrs Miller

Yours sincerely

Dr Innes
166 Leavesden Road
Watford
Herts
WD2 5EG

Dear Dr Innes
Perry EVANS - GRO-C 61
GRO-C Herts

Diagnosis: mild haemophilia A - level of factor VIII
5.5 u/dl.

Perry attended the Centre for a review recently. Generally his health is very good. As a mild haemophiliac he only requires treatment following trauma. He is very keen on group sports such as football and hockey and often sustains injuries subsequent to playing in these games and so exposes himself to the risk of concentrate infusions. He has treated himself at home on a regular basis for many years now.

His only problems have been a tendency to recurrent throat infections and that he is known to have small but easily palpable lymph nodes in the cervical and axillary regions.

On examination he looked well. His weight was 68 kgs (a fall of 4 kgs). Blood pressure 120/80. Small nodes palpable left and right cervical regions and right axilla, all less than half a centimetre in diameter. Examination of the chest and abdomen - normal.

Investigations:

Haemtology:	Haemoglobin	14.2 g/dl
	White Cell Count	$3.1 \times 10^9/l$
	Platelets	$202 \times 10^9/l$

Biochemistry: Urea & electrolytes and quantitation of immunoglobulins - normal

Liver function tests - mildly abnormal with fluctuating aspartate transaminase levels, varying between 36 and 87 mmol/l, normal upper limit 40.

- 2 -

26 September 1986

Dr Innes

Perry EVANS

Immunology: absolute number of T helper cells reduced
at $0.19 \times 10^9/l$, normal range - $0.6 - 1.7 \times 10^9/l$.

In conclusion, Perry Evans is clinically well at the present time. His abnormal liver function tests are almost certainly due to chronic non-A non-B hepatitis which is commonly seen in people receiving factor concentrates. Because of his recent weight loss and palpable lymphadenopathy, we are keeping him under regular review and see him every three months. We will keep you informed of his progress.

Yours sincerely

Dear Dr Goldman,

As expected my twisted foot has recovered enough so that I can perform in the show, as enclosed.

I was wondering if any of the staff within the centre lived within the area anywhere near GRO-C, and if they'd like to come and see my wonderful performance?

If they'd like tickets then they can use the form enclosed. Otherwise they could turn up on the night. (I believe that Saturday + Friday nights are nearly sold out ~~nearly~~ though). Please they can phone me for any more details.

Thanks

GRO-C

P.S. I am playing the part of the Boyfriend in the show.

Fee for this Report £ 11.00

We have received a proposal for insurance on the life of the person named above who has given your name as Medical Attendant and consented to our referring to you regarding his/her medical history.

We should be most grateful if you will complete the report form overleaf from your records and let us have additional information which you feel is relevant. All information will be treated in strictest confidence. We are not asking for an examination of or personal interview with your patient.

The Society is unable to deal with the proposal until your report is received. We should be grateful therefore if you would return the report as soon as possible in the enclosed pre-paid Business Reply envelope.

On receipt of your report we shall have pleasure in remitting to you the usual fee, as shown.

GRO-C

SEE OVERLEAF

MEDICAL ATTENDANT'S REPORT

We are concerned with a proposal for: Life Insurance

Permanent Health Insurance

1. How long have you been the Medical Attendant? 1 year 4 months

2. From what date do the records of the proposer in your possession commence? 26.12.84

3. Have you any knowledge of present or previous excess use of alcohol, tobacco or drugs? NO YES If YES please give details

4. Is the proposer subject to any recurrent illness? YES moderate haemophilia A - factor VIII 5u/dl
3 haematomas

5. Are any drugs or other treatment at present being prescribed? If so, give dosage. YES Factor VIII when required to correct haemorrhage

6. Please give details of the significant illnesses or accidents which appear on the record card
Any additional information which you think might assist us in assessing the risk will also be appreciated.

We would in particular appreciate details of the reported history of the following conditions: -

Special Features Haemophilia; results of investigations, severity and treatment.

Dates and Duration	Nature of Illness or Accident (please omit trivia)	Time Off Work	Treatment, Results of Tests and Investigations, X-rays etc.
	<p>Mr. Evans does not bleed spontaneously but is likely to bleed excessively during surgery or after injury. He requires treatment about once a month for bleeds following minor injury - usually the result of some sporting activity. He is a very fit young man who plays sport regularly. He suffers from dry jaw for which he takes anti-histamines when necessary.</p> <p>He has been on home treatment since 1979 + so is able to treat haemorrhages very promptly thus avoiding progressive damage to muscles & joints. Treatment is by intravenous infusion of heat treated factor VIII concentrate. Being on a home therapy programme means that he seldom needs to take time off work.</p>		

7. Please give dates and findings in your records of:
(a) blood pressure and (b) urine tests.

(a)	DATE	SYSTOLIC	DIASTOLIC
	3.2.86	130	90

(b)	DATE	ALBUMIN	SUGAR
	3.2.86	NEG.	NEG.

Herts
WD2 5EG

Dear Dr Innes

Perry Evans - **GRO-C** 61

GRO-C

I understand that Mr Evans has registered with your practice. No doubt you will have received copies of past correspondence from Dr Heatherington.

Mr Evans transferred to the Royal Free Hospital Haemophilia Centre from Hammersmith Hospital in February 1985. He is a mild haemophiliac (factor VIII 5 u/dl) who does not suffer from spontaneous bleeds but has bleeds after minor trauma, about one every 6 - 8 weeks. He is a very active young man who plays football and has even been parachuting, much to the horror of his doctor's at the time. He treats himself with factor VIII when necessary.

His general health is good. All joints have a full range of movement. He was noted in May of this year to have several enlarged lymph glands on the right side of his neck and 1 small gland in his right axilla. He has chronically enlarged tonsils. There were no other abnormalities on clinical examination. Haemoglobin and liver function tests were normal apart from a mildly elevated AST. Chest xray was clear. HBs AG - negative. Viral studies have not been completed, but tests for toxoplasma, Epstein-Barr virus showed no evidence of recent infection. He will be reviewed at 3 monthly intervals.

Yours sincerely

Positive family history (maternal grandfather & his brother). Requires treatment approximately once a month. Able to administer factor VIII himself.

7. Female examinees only:-

a) Number of Children

b) Any miscarriages or abnormality of the uterine function

a) /

b) /

8. What are the names and addresses of your usual N.H.S. doctor and all other doctors from whom you have sought advice within the past 3 years?

1. Dr. Hetherington, Tudor Row Surgery, Tudor Row Kingston, Surrey.
2. Haemophilia Centre, Hammermill Hospital, Dr. Care Rd. W12
3. Haemophilia Centre, Royal Free Hospital, Pond St. NW3.

I declare that the above statements are true and complete and that I have not knowingly withheld any information.

Date . 2/5/85 .

GRO-C

(Signature of person whose life is to be assured)

PART TWO QUESTIONS TO BE ANSWERED BY THE MEDICAL EXAMINER

9. a) Are you personally acquainted with the examinee? If so, please state for how long and indicate the general state of health.
 b) Have you attended the examinee professionally? If so, please give particulars.

a) Since 24.12.84
 General health good.
 b) Patient has moderate haemophilia 'A' previously registered at the Hammermill Hospital + has now transferred to the Royal Free Hospital Haemophilia Centre.
 See note 18.

MEASUREMENTS

10. a) Height (in shoes).
 b) Weight (in indoor clothes) by actual weighing.
 c) Chest measurement at nipple.
 d) Abdominal measurement at umbilicus.
 e) Is the weight increasing, decreasing or stationary?
 f) Is the weight well distributed?

a) ..5.. feet . 9/2 inches (174 cms)
 b) stones pounds (71. kgs)
 c) Full inspiration inches (26 cms)
 Full expiration inches (25 cms)
 d) inches (82 cms)
 e) Increasing/Decreasing/Stationary (Please delete those which do not apply).
 f) yes -

APPEARANCE

11. a) Is there anything unusual in the build or appearance?
 b) Does the examinee look older than the age given?
 c) Is there any reason to suspect that the examinee has ever been intemperate or addicted to the use of drugs?

NO	YES	IF 'YES' PLEASE GIVE FULL DETAILS
<input checked="" type="checkbox"/>	<input type="checkbox"/>	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	

NERVOUS SYSTEM

12. a) Is there any reason to suspect disease?
 b) Is there any abnormality of the pupil reflexes or knee jerks?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	

CIRCULATORY SYSTEM

13. a) Is there anything unusual in the character of the pulse?
 b) Is there anything unusual in the character or position of the cardiac impulse? (If yes, state position of apex beat and character of impulse.)
 c) Is there any abnormality of the heart sounds?
 d) Are any murmurs present? (If yes, state character, site and whether they vary with respiration or posture.)
 e) Is there any abnormality of the blood vessels?
 f) Are there varicose veins present?

PULSE

If the rate is over 90 please record a further reading at the end of the examination.

PULSE RATE/MIN	60	
----------------	----	--

BLOOD PRESSURE

The Diastolic reading should be taken at cessation of sound (fifth phase). Please take at least two further readings if over 140/90 after rest

SYSTOLIC	DIASTOLIC
120	80

RESPIRATORY SYSTEM

14. a) Is there any abnormality in the chest formation?
 b) Is there any abnormality on percussion or auscultation?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	

	NO	YES	IF 'YES' PLEASE GIVE FULL DETAILS
DIGESTIVE SYSTEM			
15. a) Is there any abnormality of the tongue, teeth, gums or throat?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Very large tonsils. Not inflamed at present.
b) Is there any abnormality of the abdomen on palpation?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
c) Is there any hernia?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
d) Is there any enlargement of the liver or spleen?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	

URINE EXAMINATION			
(The specimen should be passed at the time of examination)			
16. a) Is there any abnormality of micturition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	If albumen is present and the applicant is under 40 please take two further tests one on rising in the morning and the other later in the day.
b) Is there albumen present?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
c) Is there sugar present?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
d) Is there any other abnormality?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	

GENERATIVE ORGANS			
17. a) Is there any reason to suspect syphilis, or any other form of venereal disease?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
If the Examinee is female:--			
b) Is there any abnormality of the uterine functions?	<input type="checkbox"/>	<input type="checkbox"/>	
c) Is the examinee pregnant?	<input type="checkbox"/>	<input type="checkbox"/>	

GENERAL REMARKS OR RECOMMENDATIONS.

18. Mr. Evans does not bleed spontaneously but is likely to bleed excessively during surgery or after severe injury. Treatment is by intravenous infusion of factor VIII. He requires treatment about once a month for bleeds which are the result of minor trauma, usually while playing 5 a side football. He is a very fit young man who plays sport regularly. He suffers from long feet for which he takes analgesics. He has been on home treatment with factor VIII since 1979 and so is able to treat all bleeds very promptly + by stopping bleeds early can avoid progressive damage to muscles at joints + also avoid having to take time off work.

OPINION	IF OTHER THAN (a) PLEASE GIVE REASONS
19. In which of the following classes would you place the proposer?	
(a) Insurable at normal rates	Provided that factor VIII is available to treat bleeding his haemophilia should not make him any greater risk for life insurance purposes.
(b) Insurable only on special terms	
(c) Defer consideration	
(d) Uninsurable.

WORK:

GRO-C

Dear Dr Goldman,

Since February I have moved address as indicated on the data base change sheet enclosed. As yet I have not seen a G.P. in the GRO-C area so I can not give you a name or address for this.

I have only used 4 bottles of Factorate since I last saw you and these were used to halt bleeds after I had sustained knocks during 5-a-side football games. During last week I completed activities like caving and abseiling and am pleased to report that I had no bleeding incidents.

In May I will be running in a 10 mile mini marathon and was wondering if there are any special precautions I should take?

I have also recently taken out a financial savings plan which has a small life policy associated with it. The company that are doing this require me to have a medical and for the doctor to fill out a medical questionnaire. As I saw fairly recently I was wondering if you could complete such a form without seeing me again?

I will return the old bottles of Factorate (ie non-heart treated) along with the information sheet for the bleeds.

Yours sincerely

GRO-C

Ref: EG/LG

Herts.

Dear Mr. Evans,

I enclose a new special medical disorders card to show that you are now registered as a patient of the Royal Free Hospital Haemophilia Centre. Please let me know the name and address of your new general practitioner and also fill this information in on your card. You will see that we have found your factor VIII level to be higher at the present time than was previously recorded. Your factor VIII was 8 u/dl in both the December and February tests.

Unfortunately the hepatitis B antibody tests are very slow in coming through at the moment so I have not heard the results of your test yet. I will contact you again as soon as the results are available and if you are negative for the antibody we could arrange for you to be immunised, as discussed at our last meeting.

Yours sincerely,

Eleanor Goldman, MB, BCh,
Clinical Assistant

Surrey

Dear Mr Evans,

I regret that Dr Goldman will be unable to see you on Tuesday, February 5 at 10.30 as arranged and has suggested that you might be able to come on Thursday, February 7 at 11.30 am instead.

We apologise for this inconvenience and if this is not suitable for you, please could you let us know.

Thank you.

Yours sincerely,

Hilary Ferenczi
Secretary

London W12 0HS

Dear Prof. Gordon-Smith,

Re: EVANS, Alan Perry, d.o.b. GRO-C 61
GRO-C Herts.

Thank you for referring Mr. Evans for registration here. Dr. Kernoff passed your letter on to me because I had already seen Mr. Evans' GRO-C GRO-C and collected a sample from Perry for further carrier investigations. I have written to him today asking him to visit the Centre and will issue him with a new green card. I would be grateful if you could send his records on to us.

Yours sincerely,

Eleanor Goldman, MB, BCh,
Clinical Assistant

Dear Dr Kernoff *Perry*

Re: EVANS Alan Perry, b. GRO-C 61
GRO-C Surrey (previous address)

This is a young man of 23 who has haemophilia with 2% factor VIII. Generally he requires little in the way of treatment and has in fact got up to such hair raising feats as parachuting without letting anyone into the secret. My reason for writing to you is that he has moved house and it would be much more convenient if he could attend the Royal Free than here. He is hepatitis B antigen negative and we are waiting for the HTLV antibody result to come back but there is no evidence of immune deficiency and his lymphocyte count is normal.

If you would be happy to take him onto your books, perhaps you could write to him directly and we will then send you his records from here.

With kind regards

Yours sincerely,

GRO-C

Mr. Perry Evans,

GRO-C

GRO-C Herts.

Dear Mr. Evans,

Prof. Gordon-Smith has written to Dr. Kernoff informing him that you are moving to GRO-C and would find it more convenient to be registered here. Please telephone the Centre and make an appointment for a general medical review so that we can formally register you as a patient of this centre and issue a new green card.

Yours sincerely,

Eleanor Goldman, MB, BCH,
Clinical Assistant

Dear Dr Peters,

Re: Perry Alan EVANS, dob GRO-C 61 Hospital No: 12-86-33
GRO-C Herts.

DIAGNOSIS 1 Blood blister right thumb
 2 Moderate Haemophilia A: Factor VIII = 8%
 3 HIV seropositive

This 27 year old man has had a blood blister on his right thumb for some weeks now which has not settled spontaneously. He came up today because it was painful and the skin over it necrotic.

I incised the blood blister under factor VIII cover and have asked him to continue taking factor VIII for the next two days. We will see him on the 31st October 1988 if the thumb is no better but I expect everything will be much improved.

Yours sincerely,

Dear Dr. Peters,

Re: Mr P A Evans
National Insurance No: **GRO-C**

I have spoken to Mr Evans who has given me permission to give you information about his health. He has been known to be HIV antibody positive since February 1985 when we first met him as our patient. It is possible however that he may have seroconverted before this. At present he is a very well and his immune function is within normal limits. However, from other studies we do know that some people who are infected with HIV have a reduced expectation of life and it is possible that this patient may have ill health within the next few years. However, in our experience patients who have become ill have usually managed to keep at work. I am sorry that one cannot be more precise with this condition but I think you will realise that we are in an area of great uncertainty.

As far as his haemophilia is concerned he has only mild haemophilia and his life expectancy is normal with regard to that problem. I hope this provides you with the information you need.

Yours sincerely

Dear Dr Lee

Name: Mr P A Evans
National Insurance No. GRO-C

Your patient above named has applied to join The GEC Plan which is the pension scheme of The General Electric Company, p.l.c. The Plan provides, among other things, generous death in service and ill health retirement benefits.

Membership of the Plan is voluntary and provided an employee applies to join within three years of joining the Company then membership is accepted unconditionally.

If application is made more than three years after joining the Company then a statement of health is required. The statement contains a clause consenting to the Trustee's obtaining medical information from any doctor who has attended the applicant.

I enclose a copy of a Statement of Health Form completed by Mr Evans from which you will see that he has indicated his ailments and the medication he is receiving. he also gives us permission to approach you.

Dr C Lee
Our Ref: M/PGC/WM630121B/MT869
11 July 1988
SHEET 2

In view of this information a temporary restriction has been placed on the benefit available to him. I would be pleased therefore if you would give your opinion on the life expectancy and possibility of ill health early retirement in this case.

Please send your reply in the enclosed prepaid envelope which can be superscribed to our medical adviser Dr E Peters at this address should you so desire.

Yours sincerely,

GRO-C

Dear Mr Evans,

I have received a letter from the Stanhope Pension Trust concerning your application to join the GEC Plan Pension Scheme. Before I inform them about you I think I need to see you to find out how much information about yourself you would like me to disclose to them. I also need to see you about a quite separate matter and that is that I am very pleased to be able to tell you that we are now in the position of starting the drugs treatment trial that I have previously discussed with you. I think probably the best thing is if you ring up and make an appointment for a time that is mutually convenient. I am going to be on leave for one week beginning the 8th August 1988, but otherwise I shall be here full time.

Yours sincerely

21st June 1988

Dr. Innes
166 Leavesden Road
WATFORD
Herts. WD2 5EG

Dear Dr. Innes,

Re: EVANS, Perry Alan (dob **GRO-C** 61)
GRO-C Herts.

This patient was seen with his Fiance' and Mrs Miller, our Social Worker, on the 21st June for his six monthly review. He has mild haemophilia with a factor VIII level of 8% and has been HIV positive since at least February 1985. We had a long discussion about the transmission of HIV in particular about precautions that need to be taken for sexual intercourse. They have been advised to use both a condom and a diaphragm for the patient's future wife. They plan to marry on July the 23rd 1988 and are extremely well informed about HIV infection and it's transmission.

The patient has been extremely well during the last 6 months, the only problem he has had with the respective haemophilia is following a knock on the thigh with a cricket ball which caused a large haematoma. He not had any problems related to HIV Disease on examination his weight was 72 kgms, blood pressure 160 x 80 lying there was no lymphadenopathy the mouth was healthy the skin was healthy in the abdomen I could not feel his liver or spleen and there were no masses.

INVESTIGATIONS
Hb 13.1
Wbc 3.2
Gr 1.6
AST 85
T4 Lymphocyte 0.37

This patient is very well informed about HIV disease, he has agreed to enter an asymptomatic trial using AZT. He is getting married on July 23rd 1988 and his future wife understands fully about haemophilia and HIV problems. As far as his haemophilia is concerned the only real problem is his continuing interest in cricket and football which occasionally leads to bleeds. He is managing to treat himself quite effectively.

Dear Dr Goldman,

I'm writing to you to inform you that I'm just got engaged to the young girl I brought with me back in September/August last year. It crossed my mind that you might wish to see her alone or with me. The normal 3/6 monthly reviews.

At the moment I have an appointment on the 9/3/88 at 9.15. Unfortunately Heather, fiance, can't make this so can we change it to the 8/3/88 at 9.15?

If you would like to see us with regard to some counselling that we might need then please get in contact with either of us. I'm not sure if I'm on your or another doctors books. Perhaps you could pass this letter on if its the latter of the two.

For your information my fiancées name is Heather Williamson,

Dear Dr Innes

Perry EVANS - GRO-C:61
GRO-C Herts

This patient who has mild haemophilia with a factor VIII level of 8.5% was reviewed today three months after his last review because there had been some problems with night sweats and also an enlarged tonsil.

He is a software engineer and recently has been on a trip to Morocco run by Marconi where he has helped building work in a children's hospital. This trip went very well. He away for 5 weeks but did not have any bleeds. However, 10 days ago he was kicked during a football match and had a bleed in the left lateral side of his thigh. He treated himself with 1500 units of factor VIII and this has responded well.

In general he has been very well during the past three months. It is particularly significant that he says he has only had one episode of hot sweats during this time. He has only had diarrhoea on one occasion in Morocco following eating a rather dubious meal. He was first treated with concentrate in 1973 because he was allergic to cryoprecipitate. He is known to have been HIV antibody positive since February 1985 but he probably seroconverted before this.

On examination His weight had increased to 73.1 kgs. There was no lymphadenopathy his mouth was very healthy. The left tonsil is extremely enlarged but there was no superficial exudate or abnormality in any way and it is known that he has always suffered with enlarged tonsils. His skin was healthy. In his cardiovascular, blood pressure was 130/80, heart sounds were normal and there were no added sounds. In the abdomen, his liver was enlarged at 3 cms. The spleen was not felt and there were no masses. He had a small bruise on his left patella but this left thigh was now normal.

Investigations

Haemoglobin	13.0 g/dl _g
White cell count	2.5 x 10 ⁹ /l
Platelets	173 x 10 ⁹ /l
Lymphocytes	0.9 x 10 ⁹ /l
T4 lymphocytes	0.28 x 10 ⁹ /l
T4/T8 ratio	0.84
AST	42

- 2 -

9 December 1987

Dr Innes

Perry EVANS

I had a long talk with Mr Evans and his mother separately, about HIV related problems. Mr Evans now has a girlfriend and he anticipates it might develop into a permanent relationship. He has discussed his haemophilia and HIV positivity with both her and her parents. There is no question of pre-marital sex because of his religion but he quite aware of the precautions that must be taken and the risk involved. Both he and [GRO-C] have a strong religious belief which helps them to cope with the uncertainties of HIV disease. Both he and his mother are wondering whether it might be possible to have any future wife vaccinated.

In conclusion as far as his haemophilia is concerned he continues to be at risk because he continues to play 5 a side football both for his firm Marconi and the church, thus future bleeds remain a reality in spite of him having mild haemophilia. As far as his HIV disease is concerned, quite clearly there is a potential problem although he has no fevers at present and he has increased his weight which is a good sign. His T4 level gives reason for concern.

We will see him again in 3 month's time.

Yours sincerely

Dr Innes
166 Leavesden Road
Watford
Herts
WD2 5EG

Dear Dr Innes

Perry EVANS - **GRO-C.61**
GRO-C Herts

Mr Evans attended the Haemophilia Centre for review on 9 September 1987. He reported that he tended to feel tired and had suffered from night sweats for 2-3 months. He does not have spontaneous bleeds, all haemorrhages being the result of trauma usually during one of his many sporting activities. He had had 4 bleeds as the result of trauma in the past 3 months and was seriously considering modifying his sporting activities.

A dry cough present for several weeks had resolved by the time he was seen in the Centre.

On examination his weight was stable at 70 kg, blood pressure 124/70. Mucous membranes of mouth and pharynx were healthy but the left tonsil was markedly enlarged. The small lymph nodes previously noted in the right axilla and both sides of neck were unchanged. The right thigh bleed for which he was treated in August had not completely resolved. There was still swelling and discolouration tracking down the lateral side of the knee and upper part of the calf. A small effusion was present in the right knee. Quadriceps muscles were poor, particularly on the left.

The total white cell count, lymphocyte count and T4 lymphocyte count are all reduced but the levels have not deteriorated since he was seen in April.

In view of the night sweats and enlarged tonsil he will be reviewed again in November on his return from Morocco. If the enlargement persists, tonsillectomy and histological examination of the tonsil may be considered.

Yours sincerely

Perry Evans

GRO-C

Herts

Dear Mr Evans

An appointment has been made for general review on Wednesday 9th September 1987 at 9.00am

We invite you to bring your partner and/or close family members to the appointment.

If you cannot attend, I should be grateful if you would let us know before hand, and arrange an alternative appointment date by phone.

If you are on "home treatment", please send in any treatment records two weeks before your appointment. This is to enable us to prepare an analysis before clinic.

yours sincerely

GRO-C

Kim Balson
Receptionist
Haemophilia Centre

DON'T LET THE TURKEYS GET YOU DOWN.

GRO-C

Hete

7th April 87

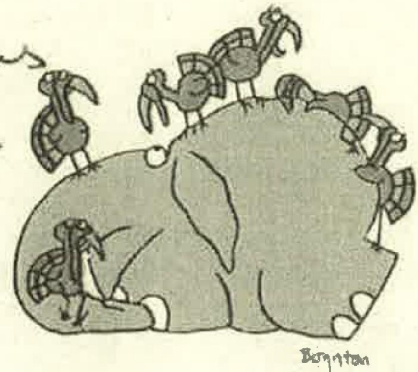

Dear Dr Millar,

I'm going to Morocco in October 87 (hopefully) and have seen my G.P. regards immunisation against

TETANUS
TYPHOID
CHOLERA
POLIO
HEPATITIS

I informed ^(He G.P) him that the Haemophilia Centre had carried out immunisation against ~~haemophilia~~ hepatitis.

Does your see any problems with undergoing the course above course of injections + sugar lumps etc, with

The advent of HIV positive (live vaccine etc)?

Also for your notebook I have started playing five-a-side football twice a week and am also playing 11 a side football for the GRO-C Baptist Church on Saturdays. ~~They're promised~~ (the football season finishes soon so don't worry too much).

See you

Perry Evans

GRO-C

Herts

Dear Perry,

Thank you for your letter about immunisation for your proposed holiday to Morocco in October 1987.

There is no problem with the tetanus, typhoid or cholera vaccine as they are inactivated preparations of the virus. However, the oral polio vaccine (sugar lump) contains live virus and would be contra-indicated because of your anti-HIV positivity. However, there is an injectable inactivated polio vaccine available which we can obtain from the Department of Health and Social Security on request.

As regards hepatitis, the main problem is hepatitis A which is transmitted by the oral-faecal route when there is poor hygiene. You have been vaccinated against hepatitis B which is transmitted by blood products and sexual contact. I am arranging for the blood we took in March from you to be tested, to see if you have been exposed to hepatitis A before. If you have detectable antibodies then you will not need further protection. Otherwise, the only means of protection is by intramuscular injection of immunoglobulin, and you would need cover with factor VIII concentrate for this.

I hope this answers your questions. I will let you know the result of the hepatitis A antibody test. When you have definite plans for going to Morocco let me know and I will arrange to obtain the inactivated polio vaccine.

Yours sincerely,

GRO-C

Herts
WD2 5EG

Dear Dr Innes

Perry EVANS - **GRO-C 61**

GRO-C

Diagnosis: Mild haemophilia A

I saw Perry for review at the Haemophilia Centre recently. Generally his health is good. He has required little factor VIII recently because he has not been playing football during the last few months.

On examination he looked well, weight 72 kg. Blood pressure 130/80. He still has minimal lymphadenopathy palpable at both axillae and bilaterally in the posterior cervical triangles. Examination of the chest and abdomen was normal.

Investigations

Haematology normal apart from a reduced white count at $3 \times 10^9/L$.

Biochemistry: He has evidence of fluctuating aspartate transaminase levels presumably due to chronic non A non B hepatitis.

Immunology. A moderately reduced lymphocyte count at $1.1 \times 10^9/L$ and total T helper count of $0.4 \times 10^9/L$ (normal lower limit $0.6 \times 10^9/L$).

In conclusion Perry is well at the present time. He has regained his previous weight loss but still has persistent lymphadenopathy. We have arranged to see him again in 6 month's time.

Yours sincerely

GRO-C

Elizabeth Miller MRCP MRCPATH

8.3.88

He would like fiancée to be fully informed of his health.

He would prefer to be informed about mother's concern: he would hope to update mother.

Wants to know blood test results.

Still plays football!

Fiancée would like to learn treatment.

Fiancée is an actress for Christian theatre company.

See cc to discuss ^{can} HIV & AIDS and how it will affect marital relationship. Discussed

1) Saps ^{can} - condoms, clean & dry + both control pill & depovertin

2) Other risk factors - e blood & body fluids

3) Having children "Don't get in to have children" thought I discussed blood in wife. (from interview etc. - some couples take a risk) adoption & foster!

GRO-C

GRO-C

GRO-C

Views of both parents (supported but want grand children) If need have kids affect on relationship & care of them. Would cope as discussed beforehand

4) Who to talk to re P. (see above cc)

5) Fair concerns. H doesn't like hospitals → also fair worry = aspect of HIV on emotional side of marriage. News about 'unreliability'! Fuck up to tests.

Assessment. Fair concerns dismissed → brought into spec. Due to Barry Terry.
