

Wd'AM/AH

27th February 1977.

The Director,
Regional Transfusion Centre,
Coxford Road,
Southampton SO9 5UP.

Dear Director,

Factor VIII Concentrate, Batch HL 1273

210 bottles of the above batch were sent to you in April 1977. Infusion of this batch has now been associated with the occurrence of jaundice. The patient received material from other batches of NHS concentrate together with a commercial concentrate. I would be grateful if you would let me know if jaundice has been observed in any patients receiving the above batch.

Yours sincerely,

GRO-C

W. d'A. Maycock.
