withen note that I referred to yesterday, we should be in section 4. We are going to start by going back in time, compared with the documents that we were looking at yesterday afternoon, to the early 1970s. looking at yesterday afternoon, to the early 1970s. The focus is going to be on Factor VIII because sometimes be used almost interchangaebly. We can sometimes see when demand to be on Factor VIII is going to seems to refer to is how much Factor VIII is going to used the word "Gemand" in the written note and III be used the word "Gemand" in the written note and III be used the word "Gemand" in the written note and III be to used the word "Gemand" in the written note and III be used the word "Gemand" in the written note and III be to used the word "Gemand" in the written note and III be to used the word "Gemand" in the written note and III be to used the word "Gemand" in the written note and III be to used the word "Gemand" in the written note and III be to used the word "Gemand" in the written note and III be to use the word "Gemand" in the written note and III be to use the word "Gemand" in the written note and III be to use the word "Gemand" in the written note and III be to use the word "Gemand" in the written note and III be to use the word "Gemand" in the written note and III be to use the word "Gemand" in the written note and III be to use the word "Gemand" in the written note and III be to use the word "Gemand" in the written note and III be to use the word "Gemand" was the in different ways in the presentation. If think this may have been picked up last week I think this may have been picked up last week I think this may have been picked up last week I think this may have been picked up last week I think this may have been picked up last week I think this may have been picked up last week I think this may have been picked up last week I think this may have been picked up last week I think this may have been picked up last week I think this may have been picked up last week I think this may	1	Wednesday, 23 March 2022	1	documents. When we get to look at some of the annexes
blood products in Scotland and for Northern Ireland by MR BOUKRAA 5 thought I dil flag that at the start to explain why I'll SIR BRIAN LANGSTAFF; Yes? 6 be using that word in this portion in this presentation. 7 mR BOUKRAA: Good morning, sir. We are turning now to 8 demand estimates. For those who are following in the 9 written note that I referred to yesterday, we should 9 that control with the documents that we were 10 that control with the documents that we were 11 that control with the documents that we were 12 tooking at yesterday aftermoon, to the early 1970s 13 The focus is going to be on Factor VII because 14 that was understool to pose the greatest challenge. 14 that was understool to pose the greatest challenge. 15 Before I move the chronology, sir. I should say we've 16 used the word 'demand' in the written note and TII be 18 using it during this part of the presentation because 19 the time. 19 that treffects the terminology in the documents from 18 SIR BRIAN LANGSTAFF: Thank you. 19 the time.	2	(9.59 am)	2	that accompany the written note, in which we've set
SIR BRIAN LANGSTAFF: Yes? 7 MR BOUKRAA. Good morning, sir. We are turning now to 8 demand estimates. For those who are following in the 8 written note that I referred to yesterday, we should 9 that consumption is what is used, demand is what is used, demand same that is used, demand same that is used, demand is what is used. I want to floor, if it is what is used in order to be used. I won the control will because it is what is what is used, demand is a word it is what is what is used, demand is a word it is used the word 'demand' in the written note and I'll be used in the presentation. 18 Before I move the chronology, sir, I should say we've if used to use them in different in using it during this part of the presentation because it was in a word that it is that reflects the terminology in the documents from it that reflects the terminology in the documents from it what is many have been picked up last week. 10 If think this may have been picked up last week. 20 If think this may have been picked up last week. 21 Using England and Wales but 'demand' is a word that using the presentation you looked at the meeting and the report during England and Wales but 'demand' is a word that using the presentation you looked at the meeting and the report during England and Wales but '	3	Presentation to the Inquiry on domestic production of	3	out the use of Factor VIII and IX, we've used the word
8 BRRIAN LANGSTAFF: Yes? 8 MR BOUKRAA. Good morning, str. We are turning now to 7 presentation. 8 demand estimates. For those who are following in the 8 BRRIAN LANGSTAFF: The two are, I suppose, different written note that I referred to yesterday, we should be in section 4. We are going to start by going back 10 asked in order to be used. 11 in time, compared with the documents that we were 11 MR BOUKRAA: Yes. Yes. That's right, sir. They can asked in order to be used. 12 in time, compared with the documents that we were 12 sometimes be used almost interchangeably. We can sometimes be used almost interchangeably, we can sometimes be used almost interchangeably. We can sometimes see when demand has been estimated, what that was understood to pose the greatest challenge. 14 seems to refer to is how much Factor VIII is going to be ordered to see them in different words. We've tried to use them in different using it during this part of the presentation because 17 ways in the presentation. 18 ISB BRIAN LANGSTAFF: Thank you. 19 the time. 19 MR BOUKRAA: So last week with the England and Wales but 'demand' is a word that 21 which came about in March 1973 with the Expert Group or ungestions, whose demand'? What information was that 21 which came about in March 1973 with the Expert Group or ungestions, whose demand'? What information was that 22 between the complete or the stream of the morphile. I'm not going us questions, whose demand'? What information was that 23 between the demand based on? All sorts of other questions no 24 if relate to attendess. It worth just noting, sir, the demand based on? All sorts of other questions no 24 if relate to attendess. If worth just noting, sir, the demand based on? All sorts of the report of the Scotiah 3 involution, you can see that Mr Wait information was that he has bad with a number of different people, including the something to be	4	blood products in Scotland and for Northern Ireland	4	"consumption" rather than the word "demand" but I just
MR BOUKRAA: Good morning, sir We are furning now to general demand estimates. For those who are following in the written note that I referred to yesterday, we should the insection A. We are going to start by going back in time, compared with the documents that we were to looking at yesterday afternoon, to the early 1970s. The focus is going to be on Factor VIII because the way of the focus is going to be on Factor VIII because the way one-from the trefered poses the greatest challenge. Before I move the chronology, sri , I should say we've to get the way one-from the word 'demand' in the written note and III be used the word 'demand' in the written note and III be used in the word 'demand' in the written note and III be the time. Before I move the chronology, sri , I should say we've to get the word 'demand' in the written note and III be the used the word 'demand' in the written note and III be the used it word 'demand' in the written note and III be the time. Before I move the chronology in the documents from the time. By RERIAN LANGSTAFF: Thank you. By RERIAN LANG	5	by MR BOUKRAA	5	thought I'd flag that at the start to explain why I'll
demand estimates. For those who are following in the written note that I referred to yesterday, we should be in section 4. We are going to start by going back in time, compared with the documents that we were in time, compared with the documents that we were looking at yesterday afternoon, to the early 1970s. The focus is going to be on Factor VIII because last was understood to pose the greatest challenge. Before I move the chronology, sirt, should say we've seems to refer to is how much Factor VIII sogged to be used those therethangeably. We can seems to refer to is how much Factor VIII sogged to be used due to its how much Factor VIII sogged to be used the word "demand has been estimated, what that was understood to pose the greatest challenge. Before I move the chronology, sirt, should say we've used the word "demand" in the written note and III be used the word "demand" in the written note and III be used the word "demand" in the written note and III be that reflects the terminology in the documents from the time. By the time of the time that the reflects the terminology in the documents from the time. By the time of the time that the reflect and the depart of the persentation. By the time. By the time. By the time. By the time. By the time of the time time the time that the reflect of the time time to show the time time. By the time. By the time of time time time the time time to show the time time to show the characters of the time time. By the time. By the time of time time time to show the characters of the time time time to show the characters. By the time of time time time to show the characters of the time time time time time time time tim	6	SIR BRIAN LANGSTAFF: Yes?	6	be using that word in this portion in this
withen note that I referred to yesterday, we should be in section 4. We are going to start by going back in time, compared with the documents that we were linking, compared with the documents from the country of the	7	MR BOUKRAA: Good morning, sir. We are turning now to	7	presentation.
be in section 4. We are going to start by going back in time, compared with the documents that we were looking at yesterday affermon, to the early 1970s. The focus is going to be on Factor VIII because Before I move the chronology, sir, I should say we've Before I should say we've Before I move the chronology, sir, I should say we've Before I should say we've Before I move the chronology, sir, I should say we've Before I should say we've Before I move the chronology, sir, I should say we've Before I should say we've Before I move the chronology, sir, I should say we've Before I should say	8	demand estimates. For those who are following in the	8	SIR BRIAN LANGSTAFF: The two are, I suppose, different in
in time, compared with the documents had we ware 11 MR BOUKRAA: Yes, Yes, That's right, sir. They can 12 looking at yesterday aftemoon, to the early 1970s. 13 The focus is going to be on Factor VIII because 14 that was understood to pose the greatest challenge. 14 seems to refer to is how much Factor VIII is going to 15 Before I move the chronodogy, sir, I should say we've 16 used the word 'demand' in the written note and III be 16 different words. We've tend to use them in different 17 using it during this part of the presentation because 18 that reflects the terminology in the documents from 18 SIR RRIAN LANGSTAFF: Thank you. 19 the time. 19 MR BOUKRAA: So last week with the England and Wales 10 I think this may have been picked up last week 21 during finglend and Wales but 'demand' is a word that 22 might need a bit of unpacking. It brings with it some 23 questions, whose demand? What information was that 24 demand based on? All sorts of other questions no 25 doubt, but we've used it because it was in some of the 26 this counterpart in Scolland, was not. 27 The meeting and that group was attended, 28 I believe, by Dr McDonald on behalf of the Scottish 29 I believe, by Dr McDonald on behalf of the Scottish 29 I believe, by Dr McDonald on behalf of the Scottish 29 We turn now to a document which was prepared by 29 Mr Watt around hat same time as that expert group was 29 considering demand for Factor VIII and, Sully, it's 29 PRSE0003153. 20 PRSE0003153. 20 PRSE0003153. 21 Plasma Fractionation in the United Kingdom. 21 Plasma Fractionation in the United Kingdom. 22 I the bottom, 12 June 1973, prepared by Mr Watt, the 23 Prepared to the same time as that expert group was 24 considering demand for Factor VIII and, Sully, it's 25 PRSE0003153. 26 Prepared to the other document which was prepared by 27 Mr Watt any seem of different people and the figures are 28 of the bottom, 12 June 1973, prepared by Mr Watt, the 29 repeated to the other document from Mr Watt 20 The seeming o	9	written note that I referred to yesterday, we should	9	that consumption is what is used, demand is what is
looking at yesterday aftermoon, to the early 1970s. The focus is going to be on Factor VIII because 13 sometimes be used almost interchangeably. We can that was understood to pose the greatest challenge. 14 seems to refer to is how unch Factor VIII is going to be seem to be used. But it's quite right, sir, they are two different words when the chronology, sir, I should say we've 15 be used, but it's quite right, sir, they are two different words. We've tried to use them in different using it during this part of the presentation because 17 ways in the presentation of the time. 18 that reflects the terminology in the documents from that reflects the terminology in the documents from the time. 19 MR BOUKRAA: So last week with the England and Wales presentation you looked at the meeting and the report during England and Wales but 'demand' is a word that during England and Wales but 'demand' is a word that demand based on?' All softs of other questions no 24 it relate to attendees. It's worth just noting, sir, that the way is the presentation of the cause it was in some of the 25 doubt, but we've used it because it was in some of the 25 doubt, but we've used it because it was in some of the 26 doubt, but we've used it because it was in some of the 27 doubt, but we've used it because it was in some of the 28 doubt, but we've used it because it was in some of the 29 doubt, but we've used it because it was in some of the 29 doubt, but we've used it because it was in some of the 29 doubt, but we've used it because it was in some of the 29 doubt, but we've used it because it was in some of the 29 doubt, but we've used it because it was in some of the 29 doubt, but we've used it because it was in some of the 29 doubt, but we've used it because it was in some of the 29 doubt, but we've used it because it was in some of the 29 doubt, but we've used it because it was in some of the 29 doubt, but we've used it because it was in some of the 29 doubt, but we've used it because it was in some of the Quitary of the 29 doubt, but	10	be in section 4. We are going to start by going back	10	asked in order to be used.
The focus is going to be on Factor VIII because 13 sometimes see when demand has been estimated, what that was understood to pose the greatest challenge. 14 seems to refer to is how much Factor VIII is going to be used the word 'demandn' in the written note and 'III be 15 be used, but it's quite right, sif, they are two different words. We've tried to use them in different used the word 'demandn' in the written note and 'III be 16 different words. We've tried to use them in different using it during this part of the presentation because 17 ways in the presentation. We've tried to use them in different ways in the presentation. 18 SIR BRIAN LANGSTAFF: Thank you. 19 the time. 19 MR BOUKRAA: So last week with the England and Wales but 'demandn' is a word that 21 which came about in March 1973 with the Expert Croup might need a bit of unpacking. It brings with it some 22 on the Treatment of Haemophilia. I'm not going to go usestions, whose demand? What information was that 23 back to that. A couple of points I would note about a demand based on? All sorts of other questions no 24 it relate to attendees. It's worth just noting, sir, 'doubt, but we've used it because it was in some of the 25 that Dr Maycock was a member of that group. Mr Watt, 18 because it was in some of the 25 quite an important one. If you start with the 1 believe, by Or McDonald on behalf of the Scottish 3 introduction, you can see that Mr Watt introduces this 1 believe, by Or McDonald on behalf of the Scottish 3 introduction, you can see that Mr Watt introduces this 2 paper by referring to communications that he has had something to bear in mind when we look at some 5 with a number of different people, including estimates that were being made in Scotland. 6 counterparts in Europe, Australasia. If we consider you are set that were being made in Scotland. 6 counterparts in Europe, Australasia. If we look at the second paragraph in this introductory on considering demand for Factor VIII and, Sully, it's 9 "The population in the United Kingdom is es	11	in time, compared with the documents that we were	11	MR BOUKRAA: Yes. Yes. That's right, sir. They can
that was understood to pose the greatest challenge. 14 seems to refer to is how much Factor VIII is going to before I move the chronology, sir, is hould say we've 15 be used, but it's quite right, sir, they are two different words. We've tried to use them in different ways in the presentation. The two different ways in the presentation because 17 ways in the presentation. 18 STR BIAN LANGSTAFF: Thank you. 19 the time. 19 MR BOUKRAA: So last week with the England and Wales but 'demand' is a word that 20 I think this may have been picked up last week 21 during England and Wales but 'demand' is a word that 22 uniquit need a bit of unpacking. It brings with it some 23 questions, whose demand? What information was that 24 demand based on? All sorts of other questions no 25 doubt, but we've used if hecause it was in some of the 26 the Country of the treatment of Heamophilia. The not going to go due to the the couple of points I would note about 27 the last Dr Maycock was a member of that group. Mr Watt, 28 The meeting and that group was attended, 29 Quite an important one. If you start with the 19 Hoeleve, by Dr McDonald on behalf of the Scottish 29 Hoeleve, by Dr McDonald on behalf of the Scottish 29 Hoeleve, by Dr McDonald on behalf of the Scottish 29 Hoeleve, by Dr McDonald on behalf of the Scottish 29 We turn now to a document which was prepared by 20 Mr Watt around that same time as that expert group was 20 considering demand for Factor VIII and, Sully, it's 20 Presentation, our can see that Mr Watt introduces this 20 Presentation of the Country of the second paragraph in this introductory 20 paragraph in the introductory 21 Session of the date of this document at 22 the bottom, 2 une 1973, prepared by Mr Watt, title 23 the presentation of the Country of the members of the date of this document 24 the bottom, 2 une 1973, prepared by Mr Watt, title 25 Soyou can see from the date of this document 26 The population in the United Kingdom. 27 Plasma Fractionation in the United Kingdom	12	looking at yesterday afternoon, to the early 1970s.	12	sometimes be used almost interchangeably. We can
Before I move the chronology, sir, I should say we've used the word "demand" in the written note and I'll be 16 different words. We've tried to use them in different used the word "demand" in the written note and I'll be 16 different words. We've tried to use them in different used that reflects the terminology in the documents from 18 strategies that reflects the terminology in the documents from 18 strategies that reflects the terminology in the documents from 18 strategies that reflects the terminology in the documents from 19 strategies that reflects the terminology in the documents from 19 strategies that reflects the terminology in the documents from 19 strategies that reflects the terminology in the documents from 19 strategies that reflects the terminology in the documents from 19 strategies that reflects the terminology in the documents from 19 strategies that reflects the terminology in the documents from 19 strategies that reflects the terminology in the documents from 19 strategies that reflects the terminology in the documents from 19 strategies that reflects the terminology in the documents from 19 strategies that reflects the terminology in the documents from 19 strategies that reflects the terminology in the documents from 19 strategies that strategies the strategie	13	The focus is going to be on Factor VIII because	13	sometimes see when demand has been estimated, what it
used the word "demand" in the written note and I'll be using it during this part of the presentation because 17 the tented state terminology in the documents from 18 SIR BRAIN LANGSTAFE: Thank you. 19 the time. 19 the time. 19 MR BOUKRAA: So last week with the England and Wales 20 I think this may have been picked up last week 21 during England and Wales but "demand" is a word that 22 unjoint need a bit of unpacking. It brings with it some 22 on the Treatment of Haemophilia. I'm not going to go 23 questions, whose demand? What information was that 24 demand based on? All sorts of other questions no 25 doubt, but we've used it because it was in some of the 26 that Dr Maycock was a member of that group. Mr Watt, 27 The meeting and that group was attended, 28 The meeting and that group was attended, 29 Quite an important one. If you start with the 29 I his counterpart in Scotland, was not. 20 The meeting and that group was attended, 21 Libelieve, by Dr McDonald on behalf of the Scottish 23 I believe, by Dr McDonald on behalf of the Scottish 24 Home and Health Department but not Mir Watt. It's just 25 We turn now to a document which was prepared by 26 We turn now to a document which was prepared by 27 Mr Wet urn now to a document which was prepared by 28 Mr Watt around that same time as that expert group was 29 considering demand for Factor VIII and, Sully, it's 30 PRESCOO3153. 31 PRESCOO3153. 32 PRESCOO3153. 33 PRESCOO3153. 34 Prepared by Mr Watt, till be to be defined fring and that we be been prepared by Mr Watt around that same time as that expert group was 34 pages by referring to complication in the United Kingdom is 35 prepared by Mr Watt, till be been in mind when we look at some 36 estimates that were being made in Scotland. 36 PRESCOO3153. 37 PRESCOO3153. 38 PRESCOO3153. 39 PRESCOO3153. 30 PRESCOO3153. 31 PRESCOO3153. 32 PRESCOO3153. 33 PRESCOO3153. 34 PRESCOO3153. 35 PRESCOO3153. 36 PRESCOO3153	14	that was understood to pose the greatest challenge.	14	seems to refer to is how much Factor VIII is going to
using it during this part of the presentation because that reflects the terminology in the documents from that reflects the terminology in the documents from the time. 18 SIR BRAN LANGSTAFF: Thank you. 19 MR BOUKRAX: So last week with the England and Wales presentation you looked at the meeting and the report which came about in March 1973 with the Expert Group might need a bit of unpecking. It brings with it some 22 on the Treatment of hospitia. The not going to go questions, whose demand? What information was that 23 back to that. A couple of points I would note about demand based on? All sorts of other questions no 24 tit relate to attendees. It's worth just noting, sir, that Dr Maycock was a member of that group. Mr Walt, 12 that Dr Maycock was a member of that group. Mr Walt, 12 The meeting and that group was attended, 2 quite an important one. If you start with the 31 I believe, by Dr McDonald on behalf of the Scottish 3 introduction, you can see that Mr Walt introduces this something to bear in mind when we look at some 5 with a number of differing tople an immind when we look at some 5 with a number of differing tople an immind when well oak at some 5 with a number of differing tople, including 6 estimates that were being made in Scotland. 6 counterparts in Europe, America, Australasia. If we look at the second paragraph in this introductory passage, Mr Walt suges, Mr	15	Before I move the chronology, sir, I should say we've	15	be used, but it's quite right, sir, they are two
the time. 18 Ithat reflects the terminology in the documents from the time. 19 MR BOUKRA: So last week with the England and Wales I think this may have been picked up last week 20 presentation you looked at the meeting and the report which came about in March 1973 with the Expert Group might need a bit of unpacking. It brings with it some 22 on the Treatment of Haemophilia. I'm not going to go questions, whose demand? What information was that 23 back to that. A couple of points I would note about it relate to attendees. It's worth just noting, sir, that Dr Maycock was a member of that group. Mr Watt. 1 2	16	used the word "demand" in the written note and I'll be	16	different words. We've tried to use them in different
19 the time. 19 It his kime may have been picked up last week 20 It hink this may have been picked up last week 21 during England and Wales but "demand" is a word that 22 during England and Wales but "demand" is a word that 23 might need a bit of unpacking. It brings with it some 24 demand based on? All sorts of other questions no 24 demand based on? All sorts of other questions no 25 doubt, but we've used it because it was in some of the 26 this counterpart in Scotland, was not. 27 The meeting and that group was attended, 28 I believe, by Dr McDonald on behalf of the Scotlish 29 I believe, by Dr McDonald on behalf of the Scotlish 30 I believe, by Dr McDonald on behalf of the Scotlish 40 I believe, by Dr McDonald on behalf of the Scotlish 41 Home and Health Department but not IM* Watt. It's just 42 paper by referring to communications that he has had with a number of different people, including estimates that were being made in Scotland. 43 Geometry of the second paragraph in this introductory passage, IM* Wat around that same time as that expert group was considering demand for Factor VIII and, Sully, it's presentation in the United Kingdom is estimated at 60 million. Of this, for purposes of the bottom, 12 June 1973, prepared by Mr Wat, time of the communication in the United Kingdom is estimated at 80 million. Of this, for purposes of 15 million. Of this, for purposes of 16 haven the about of the United Kingdom is estimated at 80 million. Of this, for purposes of 17 million in the United Kingdom is estimated at 80 million. Of this, for purposes of 18 million. Of this, for purposes of 19 million in the United Kingdom is estimated at 80 million. Of this, for purposes of 19 million in 19 million	17	using it during this part of the presentation because	17	ways in the presentation.
I think this may have been picked up last week 20	18	that reflects the terminology in the documents from	18	SIR BRIAN LANGSTAFF: Thank you.
during England and Wales but "demand" is a word that might need a bit of unpacking. It brings with it some questions, whose demand? What information was that demand based on? All sorts of other questions no doubt, but we've used it because it was in some of the 1 bis counterpart in Scotland, was not. 1 highlight a few passages in this document, but it is The meeting and that group was attended, 1 believe, by Dr McDonald on behalf of the Scotlish Something to bear in mind when we look at some something to bear in mind when we look at some estimates that were being made in Scotland. We turn now to a document which was prepared by Mr Watt around that same time as that expert group was considering demand for Factor VIII and, Sully, it's pressorial of the bottom, 12 June 1973, prepared by Wr Watt, title The sestimated at 60 million. Of this, for purposes of the bottom, 12 June 1973, prepared by Wr Watt, title The sestimated at 60 million. Of this, for purposes of the bottom, 12 June 1973, prepared by Wr Watt, title The sestimated at 60 million. Of this, for purposes of the were health of the scotland in the United Kingdom. A Personal Appraisal? You'll see in the top In the other and corner, this is said to be a draft. We In the other and corner, this is said to be a draft. We In the other and corner, this is said to be a draft. We In the other and corner, this is one is easier to In the were one of a finalised document. In the were one of the individual of the UK around this time was that we looked at yesterday, this one is easier to In the meeting and that it was prepared It comes about eight days before that 20 June meeting If we go over to page 3, and I'm just going to 25 documents but at least Mr Watt there sets out what he 26 documents but at least Mr Watt there sets out what he	19	the time.	19	MR BOUKRAA: So last week with the England and Wales
might need a bit of unpacking. It brings with it some questions, whose demand? What information was that demand based on? All sorts of other questions no demand based on? All sorts of other questions no doubt, but we've used it because it was in some of the 1 this counterpart in Scotland, was not. The meeting and that group was attended, leileive, by Dr McDonald on behalf of the Scotlish Home and Health Department but not Mr Watt. It's just Home and Health Department have repeated by Mr Watt avait in the long of the United Kingdom is estimated at 60 million. Of this, for purposes of discussion, the Scotlish population in the United Kingdom. The estimated number of haemophilia A, js 3,0	20	I think this may have been picked up last week	20	presentation you looked at the meeting and the report
questions, whose demand? What information was that demand based on? All sorts of other questions no 24 it relate to attendees. It's worth just noting, sir, doubt, but we've used it because it was in some of the 25 that Dr Maycock was a member of that group. Mr Watt, 1 2 2 that Dr Maycock was a member of that group. Mr Watt, 1 2 2 this counterpart in Scotland, was not. 1 highlight a few passages in this document, but it is quite an important one. If you start with the 1 believe, by Dr McDonald on behalf of the Scottish 3 introduction, you can see that Mr Watt introduces this something to bear in mind when we look at some 5 with a number of different people, including estimates that were being made in Scotland. 6 counterparts in Europe, America, Australasia. If we we turn now to a document which was prepared by 7 look at the second paragraph in this introductory assage, Mr Watt around that same time as that expert group was 8 passage, Mr Watt says: "The population in the United Kingdom is estimated at 60 million. Of this, for purposes of 1 So you can see from the date of this document at 11 discussion, the Scottish population is estimated at 12 the bottom, 12 June 1973, prepared by Mr Watt, title 12 5 million." The estimated number of haemophiliac patients, 14 A Personal Appraisal". You'll see in the top 14 the patients with haemophilia patients, in the top 14 the version. Compared to the other document from Mr Watt 17 fact, the population of the UK came up last week. My understanding is that, in 18 that we looked at yesterday, this one is easier to 18 closer to 56 million, I think about 50 million in 19 England and Wales, 5 million in Scotland, about 16 to 19 England and Wales, 5 million in Scotland, about 16 the population eight days before that 20 June meeting 22 time. It may be that wend of the united that we looked at 123 talking about UK population, they've got different 124 yesterday. If we go over to page 3, and I'm just going to 25 documents but at least Mr Watt here sets out what he	21		21	which came about in March 1973 with the Expert Group
questions, whose demand? What information was that demand based on? All sorts of other questions no 24 it relate to attendees. It's worth just noting, sir, doubt, but we've used it because it was in some of the 25 that Dr Maycock was a member of that group. Mr Watt, 1 2 1 2 2 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3	22	might need a bit of unpacking. It brings with it some	22	on the Treatment of Haemophilia. I'm not going to go
demand based on? All sorts of other questions no 24 it relate to attendees. It's worth just noting, sir, doubt, but we've used it because it was in some of the 25 that Dr Maycock was a member of that group. Mr Watt, 1 2 2 1 his counterpart in Scotland, was not. 1 highlight a few passages in this document, but it is 2 The meeting and that group was attended, 2 quite an important one. If you start with the 3 lbelieve, by Dr McDonald on behalf of the Scotlish 3 introduction, you can see that Mr Watt introduces this 4 Home and Health Department but not Mr Watt. It's just 4 paper by referring to communications that he has had something to bear in mind when we look at some 5 with a number of different people, including 6 estimates that were being made in Scotland. 6 counterparts in Europe, America, Australasia. If we 10 look at the second paragraph in this introductory 8 Mr Watt around that same time as that expert group was 9 passage, Mr Watt says: 10 PRSE0003153. 10 estimated at 60 million. Of this, for purposes of 11 So you can see from the date of this document at 11 discussion, the Scotlish population is estimated at 12 the bottom, 12 June 1973, prepared by Mr Watt, title 12 5 million.* The estimated number of haemophiliac patients, 14 A Personal Appraisal". You'll see in the top 14 ie patients with haemophilia A, is 3,000. 15 right-hand corner, this is said to be a draft. We 15 Now, I know that figures for population of the Wat wersion. Compared to the other document from Mr Watt 17 fact, the population of the UK around this time was 16 that we looked at yesterday, this one is easier to 18 closer to 56 million, I think about 50 million in 19 follow. It seems to be more of a finalised document. 19 England and Wales, 5 million in Scotland, about 10 follow. It seems to be more of a finalised document. 19 England and Wales, 5 million in 19 follow. It seems to be more of a finalised document. 19 England and Wales, 5 million in 19 follow. It seems to be more of a finalised document. 19 England and Wales, 5 million i	23		23	
doubt, but we've used it because it was in some of the 1 1 2 2 1 his counterpart in Scotland, was not. 1 The meeting and that group was attended, 2 quite an important one. (1) Pages 1 - 4

1 understands the UK population to be at this time. with some of the work from Dr Biggs that was referred 2 If we could have the whole page or rather the 2 to last week and we'll come back to, which suggested 3 second half of the page, this is really just to note, 3 that domestic therapy was not likely to lead to 4 sir, because we'll come back to it later, the third 4 increased use. 5 paragraph in this page refers to a policy on the use 5 Next: 6 of cellular components, which I understand to be 6 "The need for a proportion of the production as 7 a reference to the use of red cell concentrates. 7 low yielding, high purity fractions. 8 8 We'll come back to that when we look at supply from "A probable drop in yield, of Intermediate 9 9 PFC a little later. concentrate, to 30% when made on a realistic scale", 10 10 ie when you start making more of the product, when you At the bottom of this page, Mr Watt gets on to 11 AHG, and he says: 11 scale it up, it is likely that yield is going to drop 12 "The official estimate of the need for fresh 12 from what it is when you're making smaller amounts. frozen plasma for AHG preparation is given as 10 13 13 He then says: 14 donations [per] 1000 population." 14 "Allowing that this argument is correct, Scottish need for [fresh frozen plasma] becomes 15,000 15 Now, it's not totally clear to me which official 15 16 estimate Mr Watt is referring to there. It's worth 16 donations [per] million rather than the 10,000 noting nonetheless. Then we're going to continue with 17 donations now becoming available. This would provide 17 18 (at 30% yield) about 4.8 million plasma units of AHG 18 the rest of this passage. It says: 19 "On this basis the Scottish plasma availability 19 per annum for the country's need; approximately 20 is correct. It is my personal belief that this figure 20 one million [units per] million population or 20,000 21 [ie 10 donations per 1,000] is probably 30% too low 21 [units per haemophiliac per annum]. 22 22 since it presupposes an overall process yield of 40%. "It is my belief that a production of 23 These calculations do not allow for: 23 15,000 litres of fresh frozen plasma is well within 24 "Increased use in domestic therapy." 24 the capacity of the Scottish [RTCs] without [needing 25 I pause there, sir, to draw a contrast perhaps 25 to use] plasmapheresis." 5 6 SIR BRIAN LANGSTAFF: What is a plasma unit? 1 Now, there are number of figures that are set 1 out there that will be worth noting and bearing in MR BOUKRAA: My understanding is that it is a unit of 2 2 3 mind. It is also worth picking up from this passage, 3 Factor VIII. That seems to me to make the most sense, 4 and this is something we will come back to as we look 4 and that equates to about a unit of Factor VIII. 5 at the other documents. Demand estimates were quite 5 SIR BRIAN LANGSTAFF: I'm not sure that can be right, can 6 often expressed using number of different metrics at 6 it? Oh, I see. Plasma units of AHG. Right. I now 7 7 this time, they are sometimes expressed in terms of see it. Yes. He defines it himself, doesn't he, in 8 the number of donations that are needed, they are 8 the second-last line. 9 MR BOUKRAA: I think that's right. sometimes expressed as the amount of Factor VIII in 9 10 terms of units, that's all kinds of Factor VIII 10 SIR BRIAN LANGSTAFF: So a "pu" there is a plasma unit of per head of population. They're sometimes expressed 11 11 antihaemophilic globulin. 12 as the amount of Factor VIII that's needed per 12 MR BOUKRAA: Exactly, yes, and he refers to that both in 13 haemophiliac patient. 13 terms of million population. I've, at least, found it easy to not always be SIR BRIAN LANGSTAFF: Yes. 14 14 totally clear which is being referred to. I point MR BOUKRAA: So that's one per million, ie one per person, 15 15 that out because it's something that we'll see also in 16 16 because the Scottish population at this time was 17 some later documents. 17 around 5 million, that leads to 4.8 million units for 18 If we go on to the next page, please, Sully, 18 the whole of Scotland. 19 19 SIR BRIAN LANGSTAFF: Yes. page 5. 20 SIR BRIAN LANGSTAFF: The unit is used in the second -- in 20 MR BOUKRAA: If we go over the page to the top, he refers the paragraph in the middle of the page --21 here to, at the top passage, to the number of litres 21 22 MR BOUKRAA: Yes. of plasma that he thinks are going to be necessary, 22 SIR BRIAN LANGSTAFF: -- here is 1 million pu per million 23 suggesting that the figures may have to increase to 23 24 population. That's "plasma units", presumably? 24 reflect his estimate of need AHG. MR BOUKRAA: Yes. 25 If we go down to the middle of the page, we have

7

(2) Pages 5 - 8

it here actually, "Estimate of English Need", Mr Watt moves away from just looking at Scotland to apply his estimates to England, I presume that means England and Wales, perhaps also Northern Ireland, and he says this:

"Since there should be little difference between the community need of England and Scotland on a proportional basis it would appear that the Scottish figures should be applicable to England; especially since these figures are in close agreement with those established in other countries."

That leads him to a figure for England, or probably England and Wales at least, of 48 million plasma units of AHG, 48 million units of Factor VIII, split probably across all different types of Factor VIII.

He then applies that — if we can go down, please, Sully, to the last part of the page — to UK figures and his estimate is that the total UK requirement for the two plasma factions, one of which is an albumin product and the second one is AHG, is 53 million plasma units. At the bottom of the page, he suggests how many litres of plasma per annum are going to be necessary to obtain in order to meet those requirements.

"BPL and PFC are each specified for 70-80,000 litres of plasma per year. It is my opinion that BPL production could be increased to about 150,000 litres, but further increase would appear impossible on the present site and could hardly be justified."

He then refers to a difference of more than 250,000 litres that need to be accounted for.

At the bottom of this page, he says:

"Assuming that Scotland's resources will not be misused to subsidise England, a dual standard of clinical availability could come to exist."

If we go over the page, he sets out another comment:

"In my opinion, this intolerable situation could not be maintained, enough plasma to meet real need will be collected in England and, unless prompt action is taken, UK fractionation and finishing capacity will be inadequate to meet demand."

Before we go on to the next passages, worth just remembering the timing and context of this document. It's June 1973, so it's when the planning for the PFC that we looked at yesterday has already taken place in the late 1960s, and the facility is in the process of being built. It's getting towards the end of its

If we could go over the page, please, Sully to page 6, and then about the middle of the page, 5.20, "Summary of Need for Plasma". Now these two paragraphs aren't -- might not be thought to be all that clear. They're worth looking at alongside each other, particularly the first sentence. He says:

"The amount of plasma (200,000 litres or 1 million donations) required for AHG preparation is of no account in consideration of overall need."

I think that that sentence can be understood in light of the next paragraph, where he says:

"The critical figure of 400,000 litres required for PPS [ie albumin production] should ... be available from when existing [productions] ..."

Sir, maybe you can assist on this more than I can. I think what he's saying is that as long as you are getting enough to meet the albumin requirement, you should also be getting enough to meet the Factor VIII requirement. That's my understanding of these two passages read together.

And if we go down, then, to the paragraph we can see at the bottom here, Mr Watt then starts applying these figures to fractionation capacity, both within Scotland and also England and Wales. And he says, and this links back to what we were looking at yesterday:

construction. He appears to be, Mr Watt, considering the possibility that there might still need to be a change of plans which might include further expansion to PFC.

He starts by ruling out, in paragraph 6.10, a third centre in the UK. He then says in 6.20, that:

"The PFC at Liberton has process potential to handle up to 300,000 litres of plasma per year but is unable to finish PPS at equivalent rates. However, the construction of premises equal to this task on the Liberton site would appear to be the most economic and most rapid means of achieving adequate fractionation capacity in the UK."

If we go down, please, Sully, to the bottom of the page. I'm moving a bit beyond demand estimates, sir, but I think these passages are worth looking at together. He says this:

"If, as seems certain, the additional facilities should be available as soon as the specified capacity of Liberton is exceeded (ie by the end of 1974). Planning would be required to start immediately, despite the fact that some technical questions remain unresolved. Obviously, this timescale is impossible, but it would seem feasible that, provided planning detail started at once, the increased facilities could

1 be available on the Liberton site by the end of 1975. 2 Such a programme could be costly since it would 3 involve persuading existing contractors to accept a 4 new contract ..." 5 But he thinks that should be possible. 6 And if we then just get -- I'll just pick up the 7 last part of the last sentence here: 8 "However, in comparison with the global sums 9 involved, this additional expenditure could be 10 recouped in a period of months since each month 11 'saved' has a current financial implication of 12 approximately £1 million." 13 I think what he's referring to there is the cost 14 of having to buy commercial concentrates if you're not 15 able to produce enough of them in the UK. So what we 16 seem to have from this document, sir, is Mr Watt 17 coming at his own estimate for how much Factor VIII is likely to be needed both in Scotland and in the whole 18 19 of the UK, and suggesting that, despite the fact that 20 PFC is coming close to the end of its construction 21 period, the PFC and the English facilities are not 22 going to be enough to meet demand, and he has some 23 suggestions for what might be done in response. 24 25

So, soon after this meeting, the joint steering committee on blood products production met on 20 June.

25

context of the letter is that the official is concerned that another meeting of this joint steering committee that had last taken place in June 1973 was being postponed, and it seemed because there was a divergence of view between Scotland and DHSS about how to estimate needs, in particular for albumin. But the official sets out some views that are more generally applicable which illustrate the different approaches. One of the things she says, and this is covered also in the written note, she says this:

"The situation has been changed fundamentally within the past year by the commencement of importing blood products, beginning with Factor VIII."

She then outlines two alternative approaches. The first is for the Blood Transfusion Service to attempt to meet the reasonable demands of clinicians. The second is:

"... to accept that we must depend upon a significant level of imports over which we will have no direct control because purchases will be made at hospital level."

Alongside these meetings and this correspondence -- so you'll be aware that Dr Biggs and her colleagues were undertaking further work on demand estimates for Factor VIII. You were taken last week

We've already looked at the minutes of that meeting last week -- I think you were also taken to it yesterday, sorry, and you were also taken it to last week, so I'm not going to return. The meeting referred to Dr Biggs' estimate at that time of a need for 400 to 700,000 donations.

We then enter into a period, sir, towards the end of 1973 and into 1974 where there appears to be some disagreement between the Scottish Home and Health Department and their counterparts in England and Wales, the DHSS, about how to approach estimating need for blood products. We've got a number of documents which are summarised in the written note. It's important to be aware that the meetings that took place and the correspondence that happened between the two Departments often related to blood products other than factor concentrates, in particular to albumin products. Nonetheless, some of them do provide some insight into how the different departments were approaching these questions.

There's a document that I'm not going to bring up on the screen, sir. I'm just going to give you the reference for it because you may wish to return to it. It's the 14 November 1973 letter from the SHHD to the DHSS. The reference for it is SCGV0000074 033. The

14

to the paper which was presented at a January 1974 meeting of Haemophilia Centre Directors. I'm not going to return to that paper, sir. It recorded a suggestion that 500 to 700,000 donations annually were going to be necessary. I will pick things up in Scotland in the

mid-1970s by reference to a meeting of SNBTS and Haemophilia Centre Directors which took place on 11 June 1975. We are going to look at a paper which was prepared for that meeting.

Sully, it is at SCGV0000065 117. Now, this was a paper which I believe was prepared by Professor Cash who at that time was the director of the Edinburgh and Southeast Regional Transfusion Centre. It was an annex to a paper prepared by Major General Jeffrey, who was National Medical Director of the SNBTS, Professor Cash's predecessor in that role.

And if we can just have the passage at the top of the page, Professor Cash sets out suggested figures for donations for fresh plasma. So you can see the title is "Fresh plasma processing for Factor VIII". He says:

"In order to facilitate the detailed planning, at Regional Transfusion Centre ... of targets for the production of fresh plasma destined for the management

15

16 (4) Pages 13 - 16

1 of haemophilia A, it is suggested that we should aim Factor VIII per patient per year, and we'll contrast 2 at a basic maintenance figure of 12,000 donations per 2 that figure with some of the others that we're about 3 3 [million] population per annum." to look at. 4 He says that this figure is the upper limit of 4 And I'm going to start with a paper prepared at 5 the MRC estimate and is close to the current usage in 5 a similar time in September 1976 by Professor Cash and a colleague. If we can turn to that. It's 6 6 some regions. 7 I won't take you to the minutes of the meeting, 7 PRSE0003425. sir, but the SNBTS Directors and Haemophilia Centre 8 8 I'm not going to go into the detail of this 9 9 Directors who were present at that meeting in because there's quite a lot of detail. I pick it up 10 June 1975 appeared to accept this figure as an 10 partly because it was prepared by Professor Cash within just a few years by 1979, who becomes director. 11 appropriate target for donations for fresh frozen 11 12 plasma. 12 So his views on these issues are particularly 13 13 There is a document that was prepared in 1976 by noteworthy. 14 Major General Jeffrey, National Medical Director of 14 If we look at the summary box in the 15 the SNBTS, which is referred to in the written note, 15 introduction, you can see that the estimates that are 16 sir. I'm not going to take you to it. The title is 16 in this paper are based on use in south-east Scotland "Problems of supply and demand". The reference is 17 in the 1961 to 1975 period. There's then, in fact, 17 RCPE0000314_002. It covers a whole range of different 18 18 a more helpful summary, I think, of the figures that 19 blood products. It does provide some useful insight 19 are suggested two pages ahead on page 3. 20 into issues such as the use of red cell concentrates 20 If we can then have in the left-hand column, 21 at the time. 21 about halfway down, the passage that begins "Hence". 22 22 That's it, thank you. It suggests a planning figure for Factor VIII 23 and, by that, I mean all types of Factor VIII, so 23 Conclusions here are set out, sir: 24 concentrate as well as cryoprecipitate. Then Major 24 "Hence we have concluded that the blood 25 General Jeffrey suggests a figure of 10,000 units of 25 transfusion services should consider a production 17 18 1 target of an average of 15 000 units of factor 1 a programme designed to switch completely from 2 VIII/patient/year with a total UK annual requirement 2 cryoprecipitate to AHF will prove to be too costly and 3 of around 50 million units. Regionally [Regional 3 wasteful of raw material for the next decade. 4 Transfusion Centres] should aim to process at least 12 4 Consideration should instead be given to striking 5 000 fresh donations/million people/year." 5 a balance between both products and perhaps even 6 He then refers to the differences that might 6 rethinking the cost-effectiveness of freeze-dried 7 7 exist between regions and he picks up an important cryoprecipitate." 8 8 point -- or I should say they, because this paper was So we can immediately see, in terms of the 9 9 number of Factor VIII units that are suggested per prepared with Mary Spencely, I presume Dr Spencely. 10 "These calculations are based on the assumption 10 patient per year, 15,000, compared to the 10,000, in 11 that 70% of the concentrate used is cryoprecipitate, 11 the Major General Jeffrey paper I referred to, 12 which is by most standards a high yielding product. 12 contrasted with the 20,000 figure in Mr Watt's paper, 13 Any movement towards completely replacing 13 and also the suggestion that, if we're going to be cryoprecipitate by AHF [ie concentrate], unless 14 providing more concentrate than cryoprecipitate, the 14 counterbalanced by reducing the dose of factor VIII at 15 number of donations that will be necessary is going to 15 16 16 treatment, will, because of diminishing yields, go up. 17 necessitate a substantial increase in donations. 17 That's it for that document, thank you, Sully. 18 A more appropriate figure in these circumstances would 18 One of the elements in these estimates of demand 19 be 20 000 donations/million population/year. This 19 that you can see in some of the documents we have from 20 figure would rise further if the volume of fresh 20 the time is about the purpose of haemophilia 21 plasma obtained from each donation was reduced ..." 21 treatment. There's one document which we referred to 22 22 That's something that's already happening with in the written note, which I won't take you to, which 23 23 the use of red cell concentrates. sets out an apparent view of the purpose of 24 Then the conclusion and comment: 24 haemophilia treatment. It's a letter written by 25 "It is difficult not to conclude that 25 Mr Watt in February 1977 to a colleague at the York 19 20 (5) Pages 17 - 20

1 Hill Children's Hospital. 2 For your note, sir, it's PRSE0000659 and 3 Mr Watt's suggests that the number of units required 4 for both Factor VIII and Factor IX could only be 5 calculated by the number of units required to maintain 6 the patient in a reasonable state of health and he 7 suggests there was general agreement that this could 8 be defined as health that would allow the patient to 9 maintain a normal sedentary existence. 10 We get to the end of 1977, the Working Group on 11 Trends in Demand for Blood Products, which was a UK 12 working group, which you were taken to last week during the England and Wales presentation, publishes 13 14 its findings. I'm not going to go back to that 15 document or repeat all of them. I'd ask you, again, 16 sir, to note the membership, Dr Maycock was a member of that working group. Dr Cash was as well, and 17 Dr McIntyre of the Scottish Home and Health 18 19 Department. Mr Watt wasn't a member. 20 The estimate of the need for Factor VIII that's 21 reached by that working group at the end of 1977 is 22 23 24 far. 25 I'll pick things up now at the end of December

1,000 units per thousand population, in other words 10,000 units, using the metric we've been using so

The next document is an important one from January 1981, it's a report prepared by Professor Cash and it's at CBLA0001252. So we can see that it's Professor Cash's document, partly from the initials in the bottom right-hand corner. You can see the date, January 1981. This is note or report prepared for a meeting of Haemophilia Centre Directors and Transfusion Directors.

If we go through to page 3, I'm going to pick up a few different parts of this report, sir, because it's an important one.

The introductory passage is worth just noting. Professor Cash there sets out what he considers the role of the SNBTS to be:

"... to eliminate the necessity for the purchase of factor VIII concentrates for commercial concerns."

He says that there's a need for close collaboration with Haemophilia Centre Directors.

If we could go over the page, please, Sully to page 4, and the passage that begins "Future Developments in Demand", and if we could go down a bit, thank you. This is Professor Cash introducing the section of this report in which he is estimating the future demands. He says:

or rather the end of 1979. December 1979. I believe. by this point, Professor Cash has taken over as director of the SNBTS. We can see a changing and, again, increasing estimate of how much Factor VIII is thought to be needed.

Sully, the document is SBTS0000089_120.

You can just see the description of the meeting; attendees, Mr Watt, Dr Cash was in the chair --I presume he has taken over as director by then.

Then if we just go through to page 4, at the top of the page, section 5(ii):

"Dr Cash confirmed that the Directors should, in their calculations, now assume a target of 1,800 units of factor VIII per thousand population per annum."

So that figure has increased again. The figures that we've seen so far have tended to be 1,000 to 1,500, 1,800, there was also Mr Watt's earlier higher figure. So that's the position as of December 1979, at least in Scotland.

You'll recall, sir, from what we looked at yesterday, by the time we get to the late 1970s, the position as regards UK production, things had started to diverge. So we'd moved from a strong focus on UK planning at the start of the 1970s to, by the end of the 1970s, things had diverged to some significant

"This is a particularly difficult problem at the present time, primarily because the practice of Home Therapy is still evolving, the appropriate method of managing patients with inhibitors is unresolved and the unequivocal evidence that haemophilia patients are living longer, thus increasing the overall population and becoming subject to similar disease processes of older age-groups in the non-haemophilia population which are amenable to surgical intervention.

"Despite these difficulties efforts are now required which will enable the SNBTS to formulate long term plans which can, if necessary, be adjusted at a later date."

He then makes reference to conversations that he has had with colleagues within the UK and internationally and, if we go down, please, to the rest of this page, he starts to set out the basis of his reasoning for the figure that he gets to, and he starts with home therapy or severe haemophilia A patients, which forms the bulk of the estimate for demand.

You'll see, sir, that Professor Cash sets out use figures from the time, from different settings, a figure from Oxford, from Newcastle, the USA, Treloar's, and West Germany. We'll come on to see

23

24

(6) Pages 21 - 24

The Infected Blood Inquiry

1	that he suggests that the figure for Newcastle is	1	Proposals for Discussion". We can see the time period
2	an forms an appropriate basis for planning demand	2	that Professor Cash is proposing. He suggests that
3	for home therapy patients, and we can see that, if we	3	there's discussion that a target for 2.75 per million
4	go to page 6, please. At the top of the page, there's	4	population for units of Factor VIII per year be
5	a summary. Professor Cash says:	5	considered as the one to which the SNBTS should aim
6	"I believe it would be appropriate, for planning	6	for the next 5 years, ie until 1986, "with an
7	purposes, to accept the figures from Newcastle for the	7	increment thereafter" of 1,000 units per year.
8	single largest contributor (Home Therapy).	8	While we're on this document I would just note
9	"It is probable that this figure has	9	very briefly on page 11, there is reference to
10	a sufficient margin of clinical flexibility to make it	10	Factor IX. If we could have the passage just at the
11	realistic for the next 10 years."	11	top of the page, it links back to a comment I made at
12	We'll come back later in the paper to the time	12	the start. Professor Cash says:
13	period in which the demand has been estimated, but he	13	"Fortunately, because of the much smaller number
14	suggests it would be realistic for the next 10 years,	14	of haemophilia B patients than A, the supply of these
15	and he sets out the different elements of the figure	15	products is always more than adequate", with an

	29		30
1	is believed that the proposed target may go some way	1	SIR BRIAN LANGSTAFF: Just before you pass from this,
2	to meeting the potential needs for bleeding associated	2	the it's not part of the presentation, really, on
3	with chronic liver disease, which is likely to appear	3	self-sufficiency, but it may be worth noting that
4	in this patient group within the next 10 years.	4	Professor Cash says, in just the last sentence before
5	"It is significant that the use in Scotland in	5	he turns to paragraph 2.03:
6	the year ending 31st March, 1981 was of the order of	6	" the potential needs for bleeding associated
7	[1.5 million units per total population] and that is	7	with chronic liver disease, which is likely to appear
8	likely to have risen further to 1.7 for the year	8	in this patient group within the next 10 years."
9	ending 31st March, 1982."	9	So he in February, 1 February 1982, foresaw
10	Now, sir, I may have mistakenly told you that	10	a significant impact of chronic liver disease arising
11	it's in this document that Professor Cash contrasts	11	in that patient group, and that might, probably be
12	his figure with the one for NBTS, and my apologies for	12	because of the treatment they were having.
13	that. I will get to you	13	MR BOUKRAA: That certainly seems to be an inference which
14	SIR BRIAN LANGSTAFF: I think he has done, hasn't he? If	14	is available from that passage.
15	we just go back over the page, to talk about the DHSS	15	SIR BRIAN LANGSTAFF: And
16	figure.	16	MR BOUKRAA: It would be difficult to explain otherwise
17	MR BOUKRAA: Yes, well, he's talking about the DHSS	17	what Professor Cash was referring to there.
18	figure	18	SIR BRIAN LANGSTAFF: Well, the question would be why
19	SIR BRIAN LANGSTAFF: 5 years before?	19	would that patient group itself, of those with severe
	MR BOUKRAA: 5 years before.	20	haemophilia A, or (inaudible) haemophilia A, why
20 21	SIR BRIAN LANGSTAFF: So the contrast is there.	20	would they, rather than other people as group, suffer
22	MR BOUKRAA: The contrast is there, sir. He does also	22	from chronic liver disease?
23	contrast the figure with a more up-to-date one.	23	MR BOUKRAA: That's right, sir.
24	I will make sure I get you the reference, sir, in that	23 24	SIR BRIAN LANGSTAFF: Yes, and he's stating it as though
	document. I'm sure that it's there.	2 4 25	it wasn't at all controversial.
25	document. Thi sure that it's there.	20	וג אימטוו ג מנו מוו טטונוטיטומו.

(8) Pages 29 - 32

MR BOUKRAA: That's certainly one reading of this document, sir. SIR BRIAN LANGSTAFF: That's how he's stating it. MR BOUKRAA: That is how --SIR BRIAN LANGSTAFF: It may be controversial but he's certainly setting it forward as an assumption without trying to justify it. Yes, thank you. MR BOUKRAA: Sir, those are all the documents I wanted to take you to for this part of the presentation. I will get that contrast that Professor Cash made with the NBTS figure. In the written note we have, towards the end of this section, set out some comments that were made later on by a number of figures including, in particular, Professor Cash looking back at these estimates, in particular the estimate that he made in early 1981 and commenting on whether or not it proved to be a successful estimate of what was going to be needed. There's more detail on that in the written note.

So that deals with this section. We're now going to be moving on to the section dealing with production of concentrates at PFC, the question of self-sufficiency, whether it was reached and, if so, what that meant.

Dr Foster or authored by Dr Perry in advance of their oral evidence.

So we're going back in time, again, from the 1980s to the early 1970s, sir. There are a couple of documents, which are set out in the written note, from 1973, 1974, 1975, which I won't take you to. There's one from December 1973 prepared by Mr Watt, which is a report on the development of Factor VIII concentrates at that time. The reference for it is PRSE0000678. We don't need it up.

It's a useful document to look at to get a sense of what sort of concentrates were being developed by the PFC at that time, while it was still at the RIE, so before it moved to the Liberton site. What Mr Watt considered production capacity might be, and what sort of concentrates PFC should be focusing on. Similarly, there's a quarterly report for the end of September 1974, which gives some insight into the development of concentrates at that time.

There's a letter, sir, which it may be useful for you to turn to -- I won't go to it now -- later on, from January 1975. It's by Major General Jeffrey, he's writing to administrative medical officers in health boards. He sets out some of the recent history of the development of PFC and the impact of its move

Now, in the written note we've divided up this part of the presentation into three sub-areas and three parts of the chronology. The first one deals with the position in the 1970s up to the end of 1984, when heat treatment, at least for Factor VIII concentrates, is introduced in Scotland and for Northern Ireland.

We then divided it into heat treatment and the impact of heat treatment on self-sufficiency. That broadly covers the years '85, '86 to '87, and then we've looked more briefly at the period at the end of the 1980s to see whether or not self-sufficiency was maintained in Scotland, assuming it was reached before.

Now, as I go through this part of the oral presentation, I'm likely to spend some time, a good deal of time, on the first of those subheadings. I'm likely to spend less time on heat treatment. Now, heat treatment is obviously a very important topic but we are going to be hearing very shortly from Dr Foster and then from Dr Perry who were directly involved in a number of the issues. So I'm intending to set out an overview of some of the key dates, look at some important documents, but perhaps not go into as much detail about documents which were authored by

to Liberton on the production of blood products.

The reference for that, if you want to look at it, sir, later is SCGV0000127_062. We don't need it up.

One of the points that's made in that letter, which is January 1975, is about the impact of the move from the RIE site to the new Liberton site, and what the letter seems to suggest is that it was not going to be possible to overlap production at those two sites, as I understand it, because, in this new system, there was a computer which had to be moved from the old site to the new site and you couldn't have production at the two happening at the same time.

That was thought likely to have an impact on the supply of certain blood products but it was not thought likely to have an impact on the supply of factor concentrates, including Factor VIII, at the levels that they were being produced at the time, because a stock had been built up.

I highlight that point, partly because it's an interesting one on the question of building up stocks that we'll come back to as we look through these documents, through the later 1970s and into the 1980s.

Now when we move into the second half of the

(9) Pages 33 - 36

1970s and the PFC is trying to increase its production of Factor VIII in particular, one of the themes, as with England and Wales, that comes up, is about plasma supply. Getting enough fresh plasma.

In this respect, it appears that, from this period, Scotland had something of an advantage over England and Wales, which is its use or the use in Regional Transfusion Centres, and perhaps hospitals, of red cell concentrates, rather than whole blood, was already at a more advanced stage. Now, those who were here last week and attending some other hearings will know what that means.

Effectively, what it means is that when a unit or a donation of blood is collected, rather than using that whole blood for a blood transfusion, it is separated out into different components, including red cell concentrates, which are used for the transfusion, including plasma which can be sent off to be fractionated. So what that means is you've got the same number of donations but if you divide them up into these different components, including red cell concentrates, you can get more plasma out of the same number of donations.

There's a meeting of SNBTS directors, sir, in June 1975 where this issue was picked up, some targets

Now, we're going to turn to a document in which some of these supply issues were discussed in a good deal of detail. It's a meeting, again, of SNBTS directors and Haemophilia Directors, it took place in November 1975. The reference is PRSE0002823. If we start with the attendees at the meeting, we see number of individuals we've been looking at already: Professor Cash, Mr Watt, Major General Jeffrey. So this is 1975, at that time Cash is still at the Edinburgh Transfusion Centre.

Now, this meeting covered a number of different issues related to supply and we're going to look at those, starting over the page. Towards the bottom of this page, the last passage, section headed "Supplies of Factor VIII", and I'm going to pick out a few sentences in these various paragraphs that start here. So it's recorded that:

"At the May meeting of Directors it had been agreed to look again at the possibility of releasing material to Haemophilia Centres before the stock target of 1,000,000 units had been reached and as a result, Major General Jeffrey had agreed with Mr Watt that reserves could be held in Blood Transfusion Centres rather than the Protein Fractionation Centre."

I've highlighted on that -- I've alighted, are mentioned, and it suggests that good progress has been made on continuing to increase the use of red cell concentrates in Scotland. I will give you the reference. Again, sir, I won't go to it. It's PRSE0003812.

It was noted at that meeting that targets of a 40 per cent minimum use of concentrated red cells by September 1975 and 50 per cent by March 1976, the following year, were in some cases already being reached or exceeded.

Now, the use of red cell concentrates varied regionally but what that meeting suggests is that good progress was being made in a number of regions.

Notwithstanding that, the greater use of red cell concentrates, plasma supply was still a concern from the perspective of the fractionators, who were trying to produce more concentrates. We can see that in a paper prepared by Major General Jeffrey for 11 June 1975 meeting of SNBTS directors. Again, sir, just for your note, the reference is SBTS0000098_031.

In that paper Major General Jeffrey said the main concern was the supply of fresh frozen plasma for Factor VIII, so that a stockpile can be built up before a changeover from cryoprecipitate to intermediate factor can be planned.

rather, on that, sir, because it points to what becomes and appears to be already an important part of the supply policy of the SNBTS, which is to build up a stockpile of Factor VIII, which is held partly at the PFC, partly in Regional Transfusion Centres.

SIR BRIAN LANGSTAFF: Now, was the reason for that the move to Liberton, what you were telling me earlier about the need to build up stock to cover the drop-off in production there would be before Liberton became fully operational? But Liberton began to be operational in '74, didn't it?

MR BOUKRAA: It began to be operational from the point of
 view of producing blood products, I believe, in 1975,
 and really only gets going more in 1976.

SIR BRIAN LANGSTAFF: So the computer system, which was necessary to operate the system of continuous production which had been developed by Watt and was in operation at the Royal Infirmary in Edinburgh, there being only one computer that was able to control the process, that was moved. When it was moved you couldn't get any more continuous production in the Royal Infirmary, so whatever production there was, was in a different method and obviously would produce much

in a different method and obviously would produce muc less, so they wanted to build up the stocks in advance

25 of that, so they could distribute it.

(10) Pages 37 - 40

The Infected Blood Inquiry

1	So this is dealing with that problem, is it? In	1	of them, I suppose, related to that is, if at some
2	other words, is this stockpile a stockpile for all	2	point there's a shutdown
3	time as a form of strategic reserve, as it were, or is	3	SIR BRIAN LANGSTAFF: Well, that's a trough.
4	it to cover particular period?	4	MR BOUKRAA: That's a trough. Yes. A big trough. I was
5	MR BOUKRAA: I believe that the two are probably linked,	5	thinking of perhaps smaller peaks and troughs that
6	sir. It seems to me, from some of the documents that	6	might happen as plasma supply goes up and down month
7	we'll look at, that this is at least part of a more	7	to month. But you're quite right, sir; that's another
8	entrenched policy of building up a strategic reserve,	8	type of trough.
9	but I'm sure you're quite right that this policy may	9	SIR BRIAN LANGSTAFF: It would have been, I suppose,
10	well have originated in this period when there was	10	standard manufacturing practice at the time to have
11	a move from RIE to the Liberton site.	11	stocks always available. The just-in-time process of
12	So, before the move took place, it was	12	manufacturing is fairly recent, isn't it?
13	understood to be important to build up stockpile, so	13	MR BOUKRAA: I'm sure that's right, sir, but we do see
14	there wouldn't be a gap in supply during the	14	this policy and this approach being picked up on
15	transitional period, but once the move has taken	15	a number of times in the documents. The size of the
16	place, we see, from number of documents starting	16	stockpile being seen to be important. The period of
17	around this time, a repeated emphasis on the	17	time that the stockpile covers also being seen to be
18	importance of building up a stockpile in case there	18	important. We get to the later period, in to 1980s,
19	are future gaps in production.	19	and I believe it's understood that there's a need for
20	SIR BRIAN LANGSTAFF: So the reason for having the	20	about 12 months' supply of stock. We'll also see in
21	stockpile is to smooth peaks and troughs in	21	some of the documents that when the SNBTS and the
22	production?	22	fractionators are assessing whether or not
23	MR BOUKRAA: That's my understanding, sir. Well, I'm sure	23	self-sufficiency has been achieved, self-sufficiency
24	it would have had a number of elements. One of them,	24	seems to be understood as: not only is Factor VIII
25	I am sure, would be smoothing peaks and troughs. One	25	being provided to meet demand, whatever that might be,
	41		42
	7'		72
1	to provide to patients, but also that there's	1	starts to become clear at least in the material that
2	a stockpile which exists of a certain size, and it	2	we've got during that time period. I believe it's
3	seems that there are points at which Factor VIII is	3	early 1980s, but I'll come on to it.
4	not been sent on to Regional Transfusion Centres and	4	SIR BRIAN LANGSTAFF: So that particular reason for having
5	Haemophilia Centres in order to build the stockpile	5	a stockpile didn't apply in '75, or at least there's
6	back up. So I	6	no evidence of it applying. Or is there?
7	SIR BRIAN LANGSTAFF: So this is, what, a robbing Peter to	7	MR BOUKRAA: Well, not that immediately comes to mind,
8	pay Paul type policy? It's not providing the	8	sir. I'll come back to you if there is. In this
9	Factor VIII which a Centre might wish to have	^	
10		9	period, it's also important to note that patients are
	manufactured by the NHS at any rate because there may	9 10	period, it's also important to note that patients are being treated with cryoprecipitate as well as

I don't believe it's quite as clear from the documents as it becomes later on. SIR BRIAN LANGSTAFF: Thank you. MR BOUKRAA: If we move on now to a document in March 1976. We'll pick up on this question of plasma supply again. Sully, it's SCGV0000114_023. Sir, you might consider this to be an interesting document because it links back to some of the issues in England and Wales as well as looking at Scotland. We can see

1	prepared by a DHSS official that was called to	1	of the jigsaw, sir, when trying to disentangle those
2	consider Factor VIII production, 11 March 1976,	2	different figures.
3	attended by figures including Dr Maycock, Mr Watt,	3	If we look at the second passage on this page,
4	General Jeffrey.	4	just the first sentence:
5	If we look at the heading "Production capacity	5	"The amount of Factor VIII concentrate required
6	at present", in just the first sentence there it says:	6	in Scotland, based on the same 1973 expert committee
7	"In both England and Wales and Scotland, the	7	report, is 4.5 million units. That's 10 to 12,000
8	main factor is the availability of fresh plasma."	8	units per year for each haemophilia A patient."
9	I understand that to mean the main factor	9	And then I'm just going to highlight the final
10	holding back the production of more factor	10	sentence that we can see on the screen at the moment:
11	concentrates is the availability of fresh plasma.	11	"The target in Scotland of 4.5 million units
12	The end of that first paragraph refers to	12	a year can easily be met, given sufficient fresh
13	production in England and Wales at that time. And we	13	frozen plasma. There's ample manufacturing capacity."
14	considered yesterday this figure of 17.5 million,	14	So a suggestion in that meeting in 1976 that
15	15 million, when it might have been achieved, whether	15	production manufacturing capacity at PFC should be
16	it reflected capacity or actual production. This is	16	ample to meet Scotland's needs, provided enough fresh
17	another piece of the jigsaw perhaps.	17	frozen plasma is available.
18	At the present time, production in England and	18	I'm now going to look at a document which sets
19	Wales is at 30,000 containers of 250 units a year.	19	out a number of points relevant to the supply position
20	The target is 55,000 containers by June 1977, the	20	in Scotland in the mid-1970s. It's, in fact, one
21	equivalent to 14.5 million units a year. Yesterday we	21	I believe Mr Hill took you to last week, but we're
22	looked at a document which was based on well, which	22	going to look at some different passages.
23	referred to a date in August 1977, appeared to suggest	23	It's PRSE0002133. Now it's an SNBTS annual
24	a figure of 17.5 million, though that related both to	24	report, covering 1975 to '76. Again, at this time,
25	BPL and PFL. As I say, it might just be another piece	25	Major General Jeffrey was the director for the SNBTS.
	45		46
1	This was a document which referred to there being an	1	issues of concentrated red cells instead of whole
1 2	This was a document which referred to there being an emotive response to the issue of Factor VIII supply in	1 2	issues of concentrated red cells instead of whole blood and by releasing plasma which would be used for

2 3 4	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. I won't go to them again, but this is a document in	2 3 4	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities
2 3 4 5	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. I won't go to them again, but this is a document in which those passages appear.	2 3 4 5	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities (which depends on these two major factors) [it says]
2 3 4 5 6	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. I won't go to them again, but this is a document in which those passages appear. If we could go to page 11, please. In fact, if	2 3 4 5 6	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities (which depends on these two major factors) [it says] at least half of the plasma sent to the PFC is in the
2 3 4 5 6 7	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. I won't go to them again, but this is a document in which those passages appear. If we could go to page 11, please. In fact, if we could go back a page, we'll just see the heading.	2 3 4 5 6 7	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities (which depends on these two major factors) [it says] at least half of the plasma sent to the PFC is in the form of fresh frozen plasma."
2 3 4 5 6 7 8	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. I won't go to them again, but this is a document in which those passages appear. If we could go to page 11, please. In fact, if we could go back a page, we'll just see the heading. At 14, you can see this is about the use of	2 3 4 5 6 7 8	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities (which depends on these two major factors) [it says] at least half of the plasma sent to the PFC is in the form of fresh frozen plasma." There's then some comments on self-sufficiency
2 3 4 5 6 7 8	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. I won't go to them again, but this is a document in which those passages appear. If we could go to page 11, please. In fact, if we could go back a page, we'll just see the heading. At 14, you can see this is about the use of coagulation factors including subparagraph (b),	2 3 4 5 6 7 8 9	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities (which depends on these two major factors) [it says] at least half of the plasma sent to the PFC is in the form of fresh frozen plasma." There's then some comments on self-sufficiency and what self-sufficiency might mean, which points to
2 3 4 5 6 7 8 9	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. I won't go to them again, but this is a document in which those passages appear. If we could go to page 11, please. In fact, if we could go back a page, we'll just see the heading. At 14, you can see this is about the use of coagulation factors including subparagraph (b), Factor VIII, and this was a passage that I was	2 3 4 5 6 7 8 9	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities (which depends on these two major factors) [it says] at least half of the plasma sent to the PFC is in the form of fresh frozen plasma." There's then some comments on self-sufficiency and what self-sufficiency might mean, which points to its different uses at different points of time by different individuals. The report says this:
2 3 4 5 6 7 8 9 10	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. I won't go to them again, but this is a document in which those passages appear. If we could go to page 11, please. In fact, if we could go back a page, we'll just see the heading. At 14, you can see this is about the use of coagulation factors including subparagraph (b), Factor VIII, and this was a passage that I was mentioning an emotive response.	2 3 4 5 6 7 8 9 10 11	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities (which depends on these two major factors) [it says] at least half of the plasma sent to the PFC is in the form of fresh frozen plasma." There's then some comments on self-sufficiency and what self-sufficiency might mean, which points to its different uses at different points of time by
2 3 4 5 6 7 8 9 10 11 12	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. I won't go to them again, but this is a document in which those passages appear. If we could go to page 11, please. In fact, if we could go back a page, we'll just see the heading. At 14, you can see this is about the use of coagulation factors including subparagraph (b), Factor VIII, and this was a passage that I was mentioning an emotive response. If we go over the page to the bottom,	2 3 4 5 6 7 8 9 10 11	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities (which depends on these two major factors) [it says] at least half of the plasma sent to the PFC is in the form of fresh frozen plasma." There's then some comments on self-sufficiency and what self-sufficiency might mean, which points to its different uses at different points of time by different individuals. The report says this: "As regards self-sufficiency, Factor VIII is
2 3 4 5 6 7 8 9 10 11 12 13	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. I won't go to them again, but this is a document in which those passages appear. If we could go to page 11, please. In fact, if we could go back a page, we'll just see the heading. At 14, you can see this is about the use of coagulation factors including subparagraph (b), Factor VIII, and this was a passage that I was mentioning an emotive response. If we go over the page to the bottom, subparagraph 4. So this is 1975 to 1976:	2 3 4 5 6 7 8 9 10 11 12 13	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities (which depends on these two major factors) [it says] at least half of the plasma sent to the PFC is in the form of fresh frozen plasma." There's then some comments on self-sufficiency and what self-sufficiency might mean, which points to its different uses at different points of time by different individuals. The report says this: "As regards self-sufficiency, Factor VIII is available to treat adequately the known haemophilia
2 3 4 5 6 7 8 9 10 11 12 13 14	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. I won't go to them again, but this is a document in which those passages appear. If we could go to page 11, please. In fact, if we could go back a page, we'll just see the heading. At 14, you can see this is about the use of coagulation factors including subparagraph (b), Factor VIII, and this was a passage that I was mentioning an emotive response. If we go over the page to the bottom, subparagraph 4. So this is 1975 to 1976: "Requirements of Factor VIII are at present	2 3 4 5 6 7 8 9 10 11 12 13 14	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities (which depends on these two major factors) [it says] at least half of the plasma sent to the PFC is in the form of fresh frozen plasma." There's then some comments on self-sufficiency and what self-sufficiency might mean, which points to its different uses at different points of time by different individuals. The report says this: "As regards self-sufficiency, Factor VIII is available to treat adequately the known haemophilia population in Scotland. The form in which it is available does not as yet meet the major demand for
2 3 4 5 6 7 8 9 10 11 12 13 14 15	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. I won't go to them again, but this is a document in which those passages appear. If we could go to page 11, please. In fact, if we could go back a page, we'll just see the heading. At 14, you can see this is about the use of coagulation factors including subparagraph (b), Factor VIII, and this was a passage that I was mentioning an emotive response. If we go over the page to the bottom, subparagraph 4. So this is 1975 to 1976: "Requirements of Factor VIII are at present based on an estimated average use of 10,000 units per	2 3 4 5 6 7 8 9 10 11 12 13 14 15	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities (which depends on these two major factors) [it says] at least half of the plasma sent to the PFC is in the form of fresh frozen plasma." There's then some comments on self-sufficiency and what self-sufficiency might mean, which points to its different uses at different points of time by different individuals. The report says this: "As regards self-sufficiency, Factor VIII is available to treat adequately the known haemophilia population in Scotland. The form in which it is available does not as yet meet the major demand for home therapy. Present policy is to issue intermediate
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. I won't go to them again, but this is a document in which those passages appear. If we could go to page 11, please. In fact, if we could go back a page, we'll just see the heading. At 14, you can see this is about the use of coagulation factors including subparagraph (b), Factor VIII, and this was a passage that I was mentioning an emotive response. If we go over the page to the bottom, subparagraph 4. So this is 1975 to 1976: "Requirements of Factor VIII are at present based on an estimated average use of 10,000 units per patient annually some 4 million units for the known haemophilia population in Scotland."	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities (which depends on these two major factors) [it says] at least half of the plasma sent to the PFC is in the form of fresh frozen plasma." There's then some comments on self-sufficiency and what self-sufficiency might mean, which points to its different uses at different points of time by different individuals. The report says this: "As regards self-sufficiency, Factor VIII is available to treat adequately the known haemophilia population in Scotland. The form in which it is available does not as yet meet the major demand for
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. So this is 1975 to 1976: "Requirements of Factor VIII are at present based on an estimated average use of 10,000 units per patient annually some 4 million units for the known haemophilia population in Scotland." If we go over the page, please, Sully, to page 12, looking at the second half, the section that is subparagraph or paragraph 6, "Present supply and demand situation". I'm not going to read all of	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities (which depends on these two major factors) [it says] at least half of the plasma sent to the PFC is in the form of fresh frozen plasma." There's then some comments on self-sufficiency and what self-sufficiency might mean, which points to its different uses at different points of time by different individuals. The report says this: "As regards self-sufficiency, Factor VIII is available to treat adequately the known haemophilia population in Scotland. The form in which it is available does not as yet meet the major demand for home therapy. Present policy is to issue intermediate factor to centres, with only a very small national reserve at the PFC; Directors of haemophilia and Regional Transfusion Centres are expected to maintain their own reserves, and patients should be introduced to home therapy only when an adequate reserve three
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. I won't go to them again, but this is a document in which those passages appear. If we could go to page 11, please. In fact, if we could go back a page, we'll just see the heading. At 14, you can see this is about the use of coagulation factors including subparagraph (b), Factor VIII, and this was a passage that I was mentioning an emotive response. If we go over the page to the bottom, subparagraph 4. So this is 1975 to 1976: "Requirements of Factor VIII are at present based on an estimated average use of 10,000 units per patient annually some 4 million units for the known haemophilia population in Scotland." If we go over the page, please, Sully, to page 12, looking at the second half, the section that is subparagraph or paragraph 6, "Present supply and demand situation". I'm not going to read all of that out. I bring to your attention, sir, the final	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities (which depends on these two major factors) [it says] at least half of the plasma sent to the PFC is in the form of fresh frozen plasma." There's then some comments on self-sufficiency and what self-sufficiency might mean, which points to its different uses at different points of time by different individuals. The report says this: "As regards self-sufficiency, Factor VIII is available to treat adequately the known haemophilia population in Scotland. The form in which it is available does not as yet meet the major demand for home therapy. Present policy is to issue intermediate factor to centres, with only a very small national reserve at the PFC; Directors of haemophilia and Regional Transfusion Centres are expected to maintain their own reserves, and patients should be introduced to home therapy only when an adequate reserve three months' anticipated use is available for each
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	emotive response to the issue of Factor VIII supply in the UK. I believe Mr Hill took you to those passages. I won't go to them again, but this is a document in which those passages appear. If we could go to page 11, please. In fact, if we could go back a page, we'll just see the heading. At 14, you can see this is about the use of coagulation factors including subparagraph (b), Factor VIII, and this was a passage that I was mentioning an emotive response. If we go over the page to the bottom, subparagraph 4. So this is 1975 to 1976: "Requirements of Factor VIII are at present based on an estimated average use of 10,000 units per patient annually some 4 million units for the known haemophilia population in Scotland." If we go over the page, please, Sully, to page 12, looking at the second half, the section that is subparagraph or paragraph 6, "Present supply and demand situation". I'm not going to read all of that out. I bring to your attention, sir, the final third of that paragraph which is about plasma supply:	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	blood and by releasing plasma which would be used for cryoprecipitate production to the PFC as concentrated Factor VIII becomes available in increasing quantities (which depends on these two major factors) [it says] at least half of the plasma sent to the PFC is in the form of fresh frozen plasma." There's then some comments on self-sufficiency and what self-sufficiency might mean, which points to its different uses at different points of time by different individuals. The report says this: "As regards self-sufficiency, Factor VIII is available to treat adequately the known haemophilia population in Scotland. The form in which it is available does not as yet meet the major demand for home therapy. Present policy is to issue intermediate factor to centres, with only a very small national reserve at the PFC; Directors of haemophilia and Regional Transfusion Centres are expected to maintain their own reserves, and patients should be introduced to home therapy only when an adequate reserve three months' anticipated use is available for each individual in case the PFC meets manufacturing

The Infected Blood Inquiry

1 there has been, in the late 1970s to about 1980, 1981, I think the context of this letter is that 2 significant changes in developments in manufacturing 2 Professor Ludlam is trying to obtain more Factor VIII 3 processes at the PFC. We pointed to, in the written 3 for his patients in Edinburgh, I believe, in order to 4 4 notes, some documents which set some of those out. place more patients on the home treatment programme. 5 They cover things like continuous thawing. 5 If I can just highlight the second paragraph 6 here, where Mr Watt summarises what the distribution 6 Dr Foster in his statement suggests that, 7 between 1976 and 1981, Factor VIII yields increased by 7 arrangements are at that time for PFC product, and he 8 8 about 50 per cent. Now I'm not going to go into any 9 9 more detail about that issue but it's an important "The present situation regarding the 10 distribution of Factor VIII to regional centres from 10 part of the picture as we move into the late 1970s and the [PFC] is that each pool comes to be ready for 11 early 1980s, that we trying to understand changes to 11 12 supply of concentrates. 12 issue we place 10% in the national stockpile to be SIR BRIAN LANGSTAFF: It increased by about 50 per cent? 13 available for emergency purposes and the remainder is 13 14 MR BOUKRAA: That's the suggestion, I believe, in 14 distributed to regional centres in a proportion which 15 Dr Foster's statement, sir, between '76 and '81 --15 has been agreed by the Directors. This is roughly 16 50 per cent by '81. 16 according to the distribution of population in the 17 various regions but with a slight bias in favour of 17 I am going to take you to a couple of documents from 1980, which go to this issue of PFC's 18 18 Inverness where the geography of the region makes 19 distribution arrangements. They seem to relate to the 19 a more widespread utilisation of home therapy a rather necessary fact of life." 20 introduction of a pro rata arrangement some time in 20 21 the early 1980s but they also link back to this 21 That's the position as of February 1980. We can 22 22 pick things up later in the year, December 1980, with stockpile question. 23 The first one is PRSE0004005. This is letter 23 PRSE0004005. This is another letter from Mr Watt, 24 from Mr Watt to Dr Boulton in Edinburgh and Southeast 24 this time to Professor Cash. 25 Transfusion Centre. We don't need to go to all of it, SIR BRIAN LANGSTAFF: It probably is. 53 54 MR BOUKRAA: I hope it is. 1 some ways in which the proportions might be adjusted, 1 SIR BRIAN LANGSTAFF: This is not looking at the right 2 2 month to month, and refers to a league table which 3 3 exists at PFC. 4 MR BOUKRAA: I might have given the wrong reference. 4 That's the position at the end of 1980. As we 5 SIR BRIAN LANGSTAFF: You gave the same reference as you 5 get into 1981, one of the issues that becomes 6 had before. 6 significant at PFC is a Medicines Inspectorate report. 7 7 MR BOUKRAA: I've got the right one here. PRSE0002207. I'm not going to go to the detail of that report, sir, 8 8 Thank you. some of it is set out in the written note. I believe 9 Sir, this is December 1980, later on in the same 9 it is also covered by Dr Foster in his statement, but 10 year. Again, Mr Watt, a letter to Professor Cash. 10 it's an important part of the chronology and trying to I'm going to look at the introductory passages of the understand what's happening around this time. 11 11 12 letter. Mr Watt says: 12 I believe the visits start from the inspectors 13 "After our discussion ... I made the following 13 in 1979. They produce some initial comments. There's an updated report that they produce in October 1981, 14 arrangements for the distribution of Factor VIII 14 15 and that timing, what's set out in that October 1981 15 concentrates, to be effective from 1 January 1981. 16 16 "Each month when we prepare the total issue from report, is relevant both for what's going to happen at 17 production we shall allocate as follows: 17 PFC in the years that follow. It's also relevant to 18 "The first 15% of the total product will be 18 those discussions we were looking at yesterday between

westerday, "yesterday," yesterday, "yesterday," yesterday," yesterday," yesterday," yesterday," yesterday," yesterday," yesterday," yesterday," yesterday," yester				-
5 MR BOUKRAA: Yes. 5 It somewhere between nought and 6 issue." 7 It was also mentioned that there would be 8 MR BOUKRAA: It might be around about half. 8 MR BOUKRAA: It might be around about half. 9 which I think test in with that document from take 9 which I think test in with that document from take 10 person propriot on that figure. 9 which I think test in with that document from take 11 prograp to turn now, sir, to a document from 12 pragraph that appears on that page, you can see the 13 supply but also this question of alockpile. I'm also 14 going to pick up in his document a reference to that 15 contrast between the NBTS and the SNBTS that I 16 counter the deather, appears. 17 million [per] population per annum; in view of the 18 supply but also this question of alockpile. I'm also 19 contrast between the NBTS and the SNBTS that I 19 counters the tween the NBTS and the SNBTS that I 20 counters the tween the NBTS and the SNBTS that I 21 time. This is when I appears. 21 Time. This is when I appears. 22 I will be a supply but also going to pick up in the document a reference to that 23 So it is an 8 December 1961 meeting of SNBTS 24 So is an 8 December 1961 meeting of SNBTS 25 So it is an 8 December 1961 meeting of SNBTS 26 So it is an 8 December 1961 meeting of SNBTS 27 Intelligent the supply of the supply		•		
8 BRBNAN LANGSTAFF So it's somewhere between nought and 9 size or seven, but it's probably around about half. 9 the certainty a proportion of that figure. 9 the properties of the probably around about half. 10 Imaging four more, asi, to a document from 11 Imaging four more, asi, to a document from 12 December 1981. It's PRSE0003304. It's one which 13 December 1981. It's PRSE0003304. It's one which 14 relates both to where PE had got for in terms of its 15 upply but also this question of stockpile. I'm also 13 supply but also this question of stockpile. I'm also 14 going to pick up in this document a reference to that 15 contrast between the NSTS and the SNSTS that I 16 couldn't find earlier. It appears a bit later in 17 image and the seven the NSTS and the SNSTS that I 18 So this is an a December 1981 the meeting of SNSTS 18 So this is an a December 1981 the meeting of SNSTS 18 So this is an a December 1981 meeting of SNSTS 19 directors. If we could go through, please, to page 3, 19 [units perj million propopulation per annum; we of the passage in section 4, "National Stocks of 20 So it has been decided and was decided then to relain the larget of 2,75 so a significantly higher to a table, PFC products which had been issued. Then 23 that in large the trape of 2,75 as a significantly higher to a table, PFC products which had been issued. Then 23 that in large the trape to documents that are set out in the written self-sufficiency was understood to mean by SNBTS 25 see from the documents that are set out in the written self-sufficiency was understood to mean by SNBTS 26 see from the documents that are set out in the written self-sufficiency was understood to mean by SNBTS 27 So the see and paragraph there's a reference to what 4 Now, as were moving through 1881, sit, we can see some of those issues reflected in 10 Passage that the source of the shift-working the enumber of products when the those of the shift-working the enumber of passage than the Soe is dated February 1882, its from Mr Watt 1981 see and the sol				
six or seven, but it's probably around about half. If a live asleo mentioned that there would be live and bound of any proportion of that figure. NR BOUKRAA: It might be around about half. It's 3 an evaluation of a protuct, with the discourant from late live proportion of that figure. 9 which I think thes in with that document from late live proportion of that figure. 1980 that we just looked at.				
MR BOUKRAA: It might be around about half. It's cretainly a proportion of that figure certainly a proportion of the first percentage of the certainly a proportion of the certainly and the SNBT shall is upply but also this question of stockpile. I'm also a supply but also this question of stockpile. I'm also a supply but also this question of stockpile. I'm also a supply but also this question of stockpile. I'm also a supply but also this question of stockpile. I'm also a supply but also this question of stockpile. I'm also a supply but also this question of stockpile. I'm also a continuation of the certain of the certain is continuation of the certain		•		
certainly a proportion of that figure 9 which I think use in with rate document from late 1 December 1981. It's PRESE003394. It's one which 11 Property of the page 5, please, and the second 11 Property of the page 5, please, and the second 11 Property of the page 5, please, and the second 11 Property of the page 5, please, and the second 11 Property of the page 5, please, and the second 12 paragraph that appears on that page, you can see the output that so this question of stockpile. I'm also 13 contrast between the Scottish figures and those 14 going to pick up in this document a reference to that 14 England and Wales: 15 Contrast between the NBTS and the SNBTS that 1 15 There had also been discussion on the current 16 couldn't find earlier. It appears a bit later in 16 target 0.275 million [units of] Factor VIII [per] million [per] population per annum; in view of the 18 So his is an 8 December 1981 meeting of SNBTS 18 fact that the current NBTS target was 20 million 1991 directors. If we could go through, please, to page 3, 19 [units per] million population per annum." 20 and the passage in section 4, "National Stocks of 20 So it has been decided and was decided then to retain the target of 2.75. So a significantly higher 1992 and the passage in section 4, "National Stocks of 20 So it has been decided and was decided then to retain the target of 2.75. So a significantly higher 1992 in the second paragraph there's a reference 22 target for the production of Factor VIII in Sociand to a table, PFC products which had been issued. Then 23 than in England and Wales at that the second paragraph there's a reference to what 24 Now, as we're moving through 1981, sir, we can self-sufficiency was understood to mean by SNBTS 25 self-sufficiency was understood to mean they SNBTS 25 self-sufficiency was understood to m				
In going to lum now, sir, to a document from the processing to lum now, sir, to a document from the processing		-		·
December 1981. It's PRSE0003384. It's one which 11		, , ,		
relates both to where PFC had got to in terms of its supply but also this question of sockpile. The also apply but also this question of sockpile. The also apply but also this question of sockpile. The also apply but also this question of sockpile. The also apply but also this question of sockpile. The also apply but also this question of sockpile. The also also been discussion on the current to couldn't find earlier. It appears a bit later in 16 target of 2.75 million (purits of) Factor VIII (per) million. This is when it appears. 17 million (per) population per annum, in view of the sock bit is in an B December 1981 meeting of SNBTS and the spages. 19 million (per) population per annum, in view of the discussion. It we could go through, please, to page 3. 18 december 1981 meeting of SNBTS and the passage in section 4, "National Stocks of 20 So it has been decided and was decided then to retain the target of 2.75. So a significantly higher to a table, PFC products which had been issued. Then 23 than in England and Wales at that time. 19 In the first paragraph there there's a reference 22 target for the production of Pacid VIII in Scotland in the second paragraph there's a reference to what 24 Now, as we're moving the 1981, si, we can seelf-sufficiency was understood to mean by SNBTS 25 seel from the documents that are set out in the written 57 10 note that plasma supply is increasing very 1 If a lot is missed, for whatever reason, the net relates to the amount of plasma that's been sent and 3 relates to the amount of plasma that's been sent and 3 relates to the amount of plasma that's been sent and 3 relates to the amount of plasma that's been sent and 3 relates to the amount of plasma that's been sent and 3 relates to the amount of plasma that's been sent and 3 relates to the amount of plasma that's been sent and 3 relates to the amount of plasma that's been sent and 3 relates to the amount of plasma that's been sent and 3 relates to the amount of plasma that's been sent and 3 relates to the amount of pla				
supply but also this question of stockpile. I'm also ging to pick up in this document a reference to that contrast between the NBTS and the SNBTS that I couldn't find earlier. It appears a bit later in directors. If we could go through, please, to page 3, and the passage in section 4, "National Stocks of directors. If we could go through, please, to page 3, and the passage in section 4, "National Stocks of Blood Products" In the first paragraph there there's a reference to talkel, PFC products which had been issued. Then self-sufficiency was understood to mean by SNBTS self-sufficiency was understood to mean by SNBTS self-sufficiency was understood to mean by SNBTS on to that plasma supply is increasing very note that plasma supply is increasing very finding to PFC could fractionate it all quickly enough. There's a memo which is in the note. There's plasma in six months. We can see some of those issues reflected in the describing but also more generally that I was just describing but also more generally that I was just describing but also more generally to MC can be some of these issues reflected in There's production capacity around this time. Ther's first we put only the production of the dyer is the there's p				
going to pick up in this document a reference to that onthat between the NBTS and the SNBTS that I 15 "There had also been discussion on the current couldn't find earlier. It appears a bit later in 16 target of 2.75 million [units of] Factor VIII [per] time. This is when it appears a bit later in 16 target of 2.75 million [units of] Factor VIII [per] million [units of] Factor VIII [units o		-		
contrast between the NBTS and the SNBTS that I 15 "There had also been discussion on the current couldn't find earlier. It appears as it later in 16 target of 2.75 million [units of] Factor VIII [per] time. This is when it appears. 17 million [per] population per annum, in view of the 18 So this is an 8 December 1981 meeting of SNBTS 18 fact that the current NBTS target was 2.0 million per directors. If we could go through, please, to page 3, 19 [units per] million population per annum." and the passage in section 4, "National Stocks of 20 So it has been decided and was decided then to retain the target of 2.75. So a significantly higher to a table, PFC products which had been issued. Then 23 the first paragraph there's a reference to 21 target for the production of Factor VIII in Scotland to a table, PFC products which had been issued. Then 23 the nin England and Wales at that time. In the second paragraph there's a reference to what 24 Now, as we're moving through 1981, sir, we can self-sufficiency was understood to mean by SNBTS 25 see from the documents that are set out in the written 57 Sec. 19 significantly to PFC. A problem that begins to emerge 2 effect is to increase plasma stock, which cannot be significantly to PFC. A problem that begins to emerge 2 effect is to increase plasma stock, which cannot be 2 significantly to PFC. Outd fractionate it all quickly 4 He also makes reference to the shift-working enough. 5 trial we looked at yesterday and its effect on stocks 6 There's a memo which is in the note, 6 of plasma. 19 Society		·		
time. This is when it appears a bit later in time. This is when it appears a bit later in time. This is when it appears. This is when it appears. So this is an 8 December 1981 meeting of SNBTS So this is an 8 December 1981 meeting of SNBTS directors. If we could go through, please, to page 3, to go the country of the fact that the current NBTS target was 2.0 million of directors. If we could go through, please, to page 3, to go the country of the fact that the current NBTS target was 2.0 million of the directors. If we could go through, please, to page 3, to go the country of the fact that the current NBTS target was 2.0 million population per annum.* So it has been decided and was decided then to decide the to the country of				-
time. This is when it appears. So this is an 8 December 1981 meeting of SNBTS So this is an 8 December 1981 meeting of SNBTS and the passage in section 4, "National Stocks of Blood Products". In the first paragraph there there's a reference In the second paragraph there there's a reference to a table, PFC products which had been issued. Then in the second paragraph there's a reference to what to a table, PFC products which had been issued. Then in the second paragraph there's a reference to what to a table, PFC products which had been issued. Then in the second paragraph there's a reference to what to a table, PFC products which had been issued. Then in the second paragraph there's a reference to what seelf-sufficiency was understood to mean by SNBTS 58 The self-sufficiency was understood to mean by SNBTS 59 The self-sufficiency was understood to mean by SNBTS 50 The self-sufficiency was understood to mean by				
So this is an B December 1981 meeting of SNBTS directors. If we could go through, please, to page 3, and the passage in section 4, "National Stocks of Blood Products". In the first paragraph there there's a reference in the second paragraph there's a reference to what in the second paragraph there's a reference to what self-sufficiency was understood to mean by SNBTS self-sufficiency was understood to mean by SNBTS note that plasma supply is increasing very note that are set out in the written 57 18 lot is missed, for whatever reason, the net effect is to increase plasma stock, which cannot be relates to the amount of plasma that's been sent and whether or not PFC could fractionate it all quickly whether or not PFC could fractionate it all quickly the also makes reference to the shift-working relates to the amount of plasma that's been sent and There's a memo which is in the note, 20 August 1981, where reference is made to an plasma in six months. We can see some of those issues reflected in do whether or not PFC could fractionate it all quickly We can see some of those issues reflected in do whether or not perform the plasma plant's apply of fresh frozen do whether or not perform the plasma process that I was just describing but also more generally that I was just describing but also more generally that I was just describing but also more generally that I was just describing but also more generally that I was just describing but also more generally that I was just describing but also more generally that I was just describing but also more generally that I was just descri				
directors. If we could go through, please, to page 3, and the passage in section 4, "National Stocks of 20 So it has been decided and was decided then to 18 Blood Products". 21 aretain the target of 276. So a significantly higher 1 to a table, PFC products which had been issued. Then 23 than in England and Wales at that time. 24 In the second paragraph there's a reference to what 24 Now, as we're moving through 1981, sir, we can seelf-sufficiency was understood to mean by SNBTS 25 seef from the documents that are set out in the written 57 58 1 note that plasma supply is increasing very 1 If a lot is missed, for whatever reason, the net 2 significantly to PFC. A problem that begins to emerge 2 effect is to increase plasma stock, which cannot be 2 significantly to PFC. A problem that begins to emerge 2 effect is to increase plasma stock, which cannot be 2 enough. 4 whether or not PFC could fractionate it all quickly 4 He also makes reference to the shift-working 25 enough. 5 trial we looked at yesterday and its effect on stocks 25 enough. 5 trial we looked at yesterday and its effect on stocks 25 per cent growth in supply of fresh frozen 28 here but if we look towards the bottom of the screen, 29 plasma in six months. 9 Mr Watt says: 10 In summary, with the new shelf in the dryer 25 document we'll go to now, another letter from 21 (which he outlines elsewhere in the letter] and 25 document we'll go to now, another letter from 25 document we'll go to now, another letter from 26 document we'll go to now, another letter from 27 to Mr Cash. If we go down to the first couple of 27 to 16 facts. 18 suggested: 28 per cent growth in supply of fresh frozen 29 trays and its effect on stocks 20 (kilos) per full two weeke period" 15 suggested: 29 per cent growth in supply of fresh frozen 29 plasma in six months. 29 mr Wr Watt says: 2000 (kilos) per full two weeke period" 29 plasma in six months. 20 mr Wr Watt says: 2000 (kilos) per full two weeke period" 29 paragraphs, Mr Watt said that: 20 mr Watt 18 paragraphs,		• •		
and the passage in section 4, "National Stocks of 20 So it has been decided and was decided then to 21 Blood Products". 21 retain the larget of 27.5 So a significantly higher to a table, PFC products which had been issued. Then 23 than in England and Wales at that time. In the first paragraph there's a reference to what 24 Now, as we're moving through 1981, sir, we can self-sufficiency was understood to mean by SNBTS 25 see from the documents that are set out in the written 57 58 see from the documents that are set out in the written 57 58 see from the documents that are set out in the written 58 serif-sufficiency was understood to mean by SNBTS 25 see from the documents that are set out in the written 57 58 58 58 58 58 59 59 50 50 50 50 50 50 50 50 50 50 50 50 50				•
Blood Products" In the first paragraph there there's a reference 22 target for the production of Factor VIII in Scotland than in England and Wales at that time. 13 than in England and Wales at that time. 14 in the second paragraph there's a reference to what 15 self-sufficiency was understood to mean by SNBTS 26 self-sufficiency was understood to mean by SNBTS 27 Self-sufficiency was understood to mean by SNBTS 28 self-sufficiency was understood to mean by SNBTS 29 see from the documents that are set out in the written 10 note that plasma supply is increasing very 10 If a lot is missed, for whatever reason, the net 11 significantly to PFC. A problem that begins to emerge 12 effect is to increase plasma stock, which cannot be 13 relates to the amount of plasma that's been sent and 14 whether or not PFC could fractionate it all quickly 15 enough. 16 There's a memo which is in the note, 16 There's a memo which is in the note, 17 20 August 1981, where reference is made to an 18 estimated 25 per cent growth in supply of fresh frozen 19 plasma in six months. 19 Mr Watt says: 10 We can see some of those issues reflected in 21 a document we'll go to now, another letter from 22 document we'll go to now, another letter from 23 gives us some insight into that particular difficulty 24 that I was just describing but also more generally 25 that I was just describing but also more generally 26 that I was just describing but also more generally 27 to Mr Cash. If we go down to the first couple of 28 paragraphs, Mr Watt said that: 29 paragraphs, Mr Watt said that: 30 paragraphs, Mr Watt said that: 31 paragraphs, Mr Watt said that: 32 that ne reference is a little but of 33 that ne reference is a little but of 34 that ne was some in significantly and the stream of the wave we'll in the dryer; is 34 that ne reference is a little but of 35 the substantially in debt to the regions. 36 that substantially in debt to the regions. 37 the substantially in debt to the regions. 38 that substantially in debt to the regions. 39 that subs				
In the first paragraph there there's a reference to a table, PFC products which had been issued. Then to table, PFC products which had been issued. Then to table, PFC products which had been issued. Then to table, PFC products which had been issued. Then to table, PFC products which had been issued. Then to table, PFC products which had been issued. Then to table, PFC products which had been issued. Then to table, PFC production agacity and the site of the ward in the written to table, PFC production agacity around this time. There's a memo which is in the note, to adocument will go to now, another letter from that It's PRSE0002316. This is a letter which to MF Watt says: We can see some of those issues reflected in to MF Watt. It's PRSE0002316. This is a letter which to MF Cash. If we go down to the first couple of paragraphs, MF Watt said that: The We down of Factor VIII in Scotland that it were week. It is substantially in debt to the regions. He had no make it ment where there's a reference to what the production of Factor VIII in Scotland than in England and Wales at that time. There's a ferror the production of Factor VIII in the winter moving through 1981, sir, we can see from the documents that are set out in the written There's a memo which is in the note, to deared." If all is in issed, for whatever reason, the net decared." He also makes reference to the shift-working the lates on the some pass as tock, which cannot be cleared." He also makes reference to the shift-working the lates on the some pass as tock, which cannot be cleared." He also makes reference to the shift-working the lates on the shift-working the lates of plasma. It we looked at yesterday and its effect on stocks of plasma. There's a memo which is in the note, to a first late lates which is upply of fresh frozen the province of plasma and its effect on stocks of plasma. The we go down, actually, we've still got it up here but if we look towards the bottom of the dryer if we look towards the bottom of the dryer there or the		. •		
to a table, PFC products which had been issued. Then in the second paragraph there's a reference to what self-sufficiency was understood to mean by SNBTS self-sufficiency was understood to mean by SNBTS 57 1 note that plasma supply is increasing very significantly to PFC. A problem that begins to emerge significantly to PFC. A problem that begins to emerge significantly to PFC. A problem that begins to emerge relates to the amount of plasma that's been sent and whether or not PFC could fractionate it all quickly whether or not PFC a memo which is in the note, There's a memo which is in the note, David 1981, where reference is made to an estimated 25 per cent growth in supply of fresh frozen plasma in six months. We can see some of those issues reflected in decent well go to now, another letter from decent well go to now, another				
24 In the second paragraph there's a reference to what self-sufficiency was understood to mean by SNBTS aself-sufficiency was understood to mean by SNBTS 57 58 1 Indice that plasma supply is increasing very 1 If a lot is missed, for whatever reason, the net significantly to PFC. A problem that begins to emerge 2 effect is to increase plasma stock, which cannot be relates to the amount of plasma that's been sent and 3 cleared." 4 whether or not PFC could fractionate it all quickly 4 He also makes reference to the shift-working enough. 5 trial we looked at yesterday and its effect on stocks of plasma. 1 There's a memo which is in the note, 6 of plasma. 2 O August 1981, where reference is made to an 7 If we go down, actually, we've still got it up estimated 25 per cent growth in supply of fresh frozen 8 here but if we look towards the bottom of the screen, plasma in six months. 9 Mr Watt says: 10 We can see some of those issues reflected in 10 "In summary, with the new shelf in the dryer and a document we'll go to now, another letter from 11 (which he outlines elsewhere in the letter] and a reduction of cycle time by correction of the dryer gives us some insight into that particular difficulty 13 tray fault we expect to increase plasma process that I was just describing but also more generally 14 capacity for [fresh frozen plasma] to about 15 into PFC's production capacity around this time. 15 2000 [kilos] per full two week period" 16 North Cash. If we go down to the first couple of 17 suggested: " this will help to make in road in the stockpile and also keep up with input." 18 whether the order to the merce to the first body gathering difficulty 2 dryer, it has to be utilised? There's a little bill of 2 because of freeze-dryer limitation at PFC. At present 23 space in it, but the bottles are too tall, and so the ware getting 700 [kilos] of fresh plasma weekly and 24 size of the bottles is reduced or they get smaller 25 bottles; is that the - is there is the - where they		· - ·		-
self-sufficiency was understood to mean by SNBTS 57 58 1 note that plasma supply is increasing very 1 If a lot is missed, for whatever reason, the net 2 significantly to PFC. A problem that begins to emerge 3 relates to the amount of plasma that's been sent and 4 whether or not PFC could fractionate it all quickly 4 He also makes reference to the shift-working 5 enough. 5 trial we looked at yesterday and its effect on stocks 6 There's a memo which is in the note, 6 of plasma. 7 20 August 1981, where reference is made to an 8 estimated 25 per cent growth in supply of fresh frozen 9 plasma in six months. 9 Mr Watt says: 10 We can see some of those issues reflected in 10 "In summary, with the new shelf in the dryer 11 a document we'll go to now, another letter from 11 [which he outlines elsewhere in the letter] and 12 Mr Watt. It's PRSE0002316. This is a letter which 13 gives us some insight into that particular difficulty 14 that I was just describing but also more generally 15 into PFC's production capacity around this time. 16 So it's dated February 1982, it's from Mr Watt 17 to MC Cash. If we go down to the first couple of 17 suggested: 18 paragraphs, Mr Watt said that: 19 "By the time of the March issue of Factor VIII 20 under the 'Pro Rata' scheme the PFC will be 21 substantially in debt to the regions." 22 He then refers to a "slowly gathering difficulty 23 because of freeze-dryer limitation at PFC. At present 24 we are getting 700 [kilos] of fresh plasma weekly and 25 can process up to 720 [kilos] of a fresh plasma weekly and 26 can process up to 720 [kilos] in a full capacity week. 27 bottles, is that the — is there is the — where they		•		_
note that plasma supply is increasing very 1 If a lot is missed, for whatever reason, the net significantly to PFC. A problem that begins to emerge 2 effect is to increase plasma stock, which cannot be relates to the amount of plasma than's been sent and 3 cleared." whether or not PFC could fractionate it all quickly 4 He also makes reference to the shift-working enough. 5 trial we looked at yesterday and its effect on stocks or plasma. There's a memo which is in the note, 6 or plasma. Zo August 1981, where reference is made to an 7 If we go down, actually, we've still got it up estimated 25 per cent growth in supply of fresh frozen 8 here but if we look towards the bottom of the screen, plasma in six months. 9 Mr Watt says: We can see some of those issues reflected in 10 "In summary, with the new shelf in the dryer a document we'll go to now, another letter from 11 [which he outlines elsewhere in the letter] and a document we'll go to now, another letter from 11 [which he outlines elsewhere in the letter] and a rejeves us some insight into that particular difficulty 13 tray fault we expect to increase plasma process that that I was just describing but also more generally 14 capacity for [fresh frozen plasma] to about 15 into PFC's production capacity around this time. 15 2000 [kilos] per full two week period" 18 paragraphs, Mr Watt said that: 18 paragraphs, Mr Watt said that: 18 " this will help to make in road in the "By the time of the March issue of Factor VIII 19 stockpile and also keep up with input." 19 substantially in debt to the regions." 21 that something which occurred because there's just the dryer, it has to be utilised? There's a little bit of spaces to trail, and so the we are getting 700 [kilos] of fresh plasma weekly and 24 size of the bottles is reduced or they get smaller 25 bottles; is that the – is there is the – where they				
note that plasma supply is increasing very 1 If a lot is missed, for whatever reason, the net 2 significantly to PFC. A problem that begins to emerge 3 relates to the amount of plasma that's been sent and 4 whether or not PFC could fractionate it all quickly 5 enough. 5 trial we looked at yesterday and its effect on stocks 6 There's a memo which is in the note, 7 20 August 1981, where reference is made to an 8 estimated 25 per cent growth in supply of fresh frozen 9 plasma in six months. 9 Mr Watt says: 10 We can see some of those issues reflected in 10 a document we'll go to now, another letter from 11 a document we'll go to now, another letter from 12 Mr Watt. It's PRSE0002316. This is a letter which 13 gives us some insight into that particular difficulty 15 into PFC's production capacity around this time. 16 So it's dated February 1982, it's from Mr Watt 17 to Mar. Cash. If we go down to the first couple of 18 paragraphs, Mr Watt said that: 19 paragraphs, Mr Watt said that: 19 By the time of the March issue of Factor VIII 20 under the 'Pro Rata' scheme the PFC will be 21 substantially in debt to the regions." 22 He then refers to a "slowly gathering difficulty 23 because of freeze-dryer limitation at PFC. At present 24 we are getting 700 [kilos] of fresh plasma weekly and 25 bottles; is that the - is there is the - where they	20		20	
significantly to PFC. A problem that begins to emerge relates to the amount of plasma that's been sent and whether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC could fractionate it all quickly hether or not PFC and makes reference to the shift-working hether or not PFC and makes reference to the shift-working hether or not PFC and makes reference to the shift-working hether or not PFC and makes reference to the shift-working here but if all we look dat yesterday and its effect on stocks of plasma. If we go down, actually, we've still got it up here but if we look towards the bottom of the screen, here but if we go down, actually, we've still got it up here but if we look towards the bottom of the dryer if we a require and a sexemen in the letter and a document we'll go to now, another letter from here but if we look towards the bottom of the dryer here but if we go down, actually, we've still got it up here but if we look towards the bottom of the dryer if we an esum or not here or shift we got one, another letter from here but if we go down, actually, we've still got it up here but if we go down, actually, we've still got it up here but if we go down to the first or net or a reference is measure in the dryer		57		30
relates to the amount of plasma that's been sent and whether or not PFC could fractionate it all quickly nough. There's a memo which is in the note, There's a memo which is in the note, the estimated 25 per cent growth in supply of fresh frozen settimated 25 per cent growth in supply of fresh frozen whether with the new shelf in the dryer where the PFC will be a letter which a document we'll go to now, another letter from which it is a letter which what It's PRSE0002316. This is a letter which what It's PRSE0002316. This is a letter which what It's PRSE0002316. This is a letter which what It's production capacity around this time. So it's dated February 1982, it's from Mr Watt both of Cash. If we go down to the first couple of paragraphs, Mr Watt said that: paragraphs are there's pure there's pure the	1	note that plasma supply is increasing very	1	If a lot is missed, for whatever reason, the net
whether or not PFC could fractionate it all quickly enough. 5 trial we looked at yesterday and its effect on stocks 6 There's a memo which is in the note, 7 20 August 1981, where reference is made to an 8 estimated 25 per cent growth in supply of fresh frozen 9 plasma in six months. 9 Mr Watt says: 10 We can see some of those issues reflected in 11 [which he outlines elsewhere in the letter] and 12 Mr Watt. It's PRSE0002316. This is a letter which 13 gives us some insight into that particular difficulty 14 capacity for [fresh frozen plasma] to about 15 into PFC's production capacity around this time. 16 So it's dated February 1982, it's from Mr Watt 17 to Mr Cash. If we go down to the first couple of 18 paragraphs, Mr Watt says down to the first couple of 19 "By the time of the March issue of Factor VIII 20 under the 'Pro Rata' scheme the PFC will be 21 under the 'Pro Rata' scheme the PFC. At present 24 we are getting 700 [kilos] of fresh plasma weekly and 25 can process up to 720 [kilos] in a full capacity week. 26 bottles; is that the — is there is the — where they	2	significantly to PFC. A problem that begins to emerge	2	effect is to increase plasma stock, which cannot be
From the process of the process of the plasma of the process of plasma. There's a memo which is in the note, There's a memo which is the part of the plasma. There's go down, actually, we've still got it up Here but if we look towards the bottom of the still up There's go down, actually, we've still got it up Here but if we look towards the bottom of the still up There's go down, actually, we've still got it up Here but if we look towards the bottom of the screen, There's go down, actually, we've still got it up Here but if we look towards the bottom of the screen, There's go down, actually, we've still got it up Here but if we look towards the bottom of the screen, There's go down, actually, we've still got it up Here but if we look towards the bottom of the screen, There's go down, actually, we've still got it up Here but if we look towards the bottom of the dryer, is that we look towards the bottom of the screen, There's go down to the screen, There's a memowher left in the dryer of the dryer of the dryer in the letter and in the sex part full the outlines elsewhere in the letter of the dryer in the dryer in the dryer in the dryer in the dryer	3	relates to the amount of plasma that's been sent and	3	cleared."
There's a memo which is in the note, 7	4	whether or not PFC could fractionate it all quickly	4	He also makes reference to the shift-working
20 August 1981, where reference is made to an 8 estimated 25 per cent growth in supply of fresh frozen 9 plasma in six months. 9 Mr Watt says: 10 We can see some of those issues reflected in 10 "In summary, with the new shelf in the dryer 11 a document we'll go to now, another letter from 11 [which he outlines elsewhere in the letter] and 12 Mr Watt. It's PRSE0002316. This is a letter which 13 gives us some insight into that particular difficulty 14 tray fault we expect to increase plasma process 15 that I was just describing but also more generally 16 In other words about 1,000 kilos a week. It is 17 to Mr Cash. If we go down, actually, we've still got it up 18 a reduction of cycle time by correction of the dryer 19 tray fault we expect to increase plasma process 10 tray fault we expect to increase plasma process 11 tray fault we expect to increase plasma process 12 capacity for [fresh frozen plasma] to about 13 tray fault we week period" 14 capacity for [fresh frozen plasma] to about 15 into PFC's production capacity around this time. 16 So it's dated February 1982, it's from Mr Watt 17 to Mr Cash. If we go down to the first couple of 18 paragraphs, Mr Watt said that: 19 paragraphs, Mr Watt said that: 19 substantially in debt to the Recompose. 20 SIR BRIAN LANGSTAFF: So the new shelf in the dryer, is 21 substantially in debt to the regions." 21 that something which occurred because there's just the 22 dryer, it has to be utilised? There's a little bit of 23 because of freeze-dryer limitation at PFC. At present 24 we are getting 700 [kilos] of fresh plasma weekly and 25 can process up to 720 [kilos] in a full capacity week. 26 bottles; is that the is there is the where they	5	enough.	5	trial we looked at yesterday and its effect on stocks
estimated 25 per cent growth in supply of fresh frozen plasma in six months. We can see some of those issues reflected in a document we'll go to now, another letter from the dryer gives us some insight into that particular difficulty that I was just describing but also more generally into PFC's production capacity around this time. So it's dated February 1982, it's from Mr Watt to Mr Cash. If we go down to the first couple of paragraphs, Mr Watt said that: Bragaraphs, Mr Watt said that: Bra	6	There's a memo which is in the note,	6	of plasma.
plasma in six months. We can see some of those issues reflected in a document we'll go to now, another letter from Mr Watt. It's PRSE0002316. This is a letter which gives us some insight into that particular difficulty that I was just describing but also more generally into PFC's production capacity around this time. So it's dated February 1982, it's from Mr Watt to Mr Cash. If we go down to the first couple of paragraphs, Mr Watt said that: """ this will help to make in road in the "By the time of the March issue of Factor VIII under the 'Pro Rata' scheme the PFC will be substantially in debt to the regions." Please of Freeze-dryer limitation at PFC. At present we are getting 700 [kilos] in a full capacity week. Plasma in six months. """ which he outlines elsewhere in the letter] and "In which he outlines elsewhere in the letter] and a document we'll go to now, another letter from It which he outlines elsewhere in the letter] and a document we'll go to now, another letter from It which he outlines elsewhere in the letter] and a document we'll go to now, another letter from It which he outlines elsewhere in the letter] and a document we'll go to now, another letter from It which he outlines elsewhere in the letter] and a document we'll go to now, another letter from It which he outlines elsewhere in the letter] and a reduction of cycle time by correction of the dryer a reduction of cycle time by correction of the dryer a reduction of cycle time by correction of the dryer a reduction of cycle time by correction of the dryer a reduction of cycle time by correction of the dryer a reduction of cycle time by correction of the dryer a reduction of cycle time by correction of the dryer a reduction of cycle time by correction of the dryer a reduction of cycle time by correction of the dryer a reduction of cycle time by correction of the dryer a reduction of cycle time by correction of the dryer a reduction of cycle time by correction of the dryer a reduction of cycle time by cor	7	20 August 1981, where reference is made to an	7	If we go down, actually, we've still got it up
We can see some of those issues reflected in a document we'll go to now, another letter from If which he outlines elsewhere in the letter and Rr Watt. It's PRSE0002316. This is a letter which gives us some insight into that particular difficulty that I was just describing but also more generally that I was just describing but also more generally into PFC's production capacity around this time. So it's dated February 1982, it's from Mr Watt to Mr Cash. If we go down to the first couple of paragraphs, Mr Watt said that: "" this will help to make in road in the "By the time of the March issue of Factor VIII under the 'Pro Rata' scheme the PFC will be under the 'Pro Rata' scheme the PFC will be substantially in debt to the regions." He then refers to a "slowly gathering difficulty because of freeze-dryer limitation at PFC. At present we are getting 700 [kilos] of fresh plasma weekly and can process up to 720 [kilos] in a full capacity week. "In summary, with the new shelf in the dryer (which he outlines elsewhere in the letter] and a reduction of cycle time by correction of the dryer tray fault we expect to increase plasma process capacity for [fresh frozen plasma] to about 2000 [kilos] per full two week period" 15 2000 [kilos] per full two week period" 16 In other words about 1,000 kilos a week. It is suggested: "" this will help to make in road in the stockpile and also keep up with input." SIR BRIAN LANGSTAFF: So the new shelf in the dryer, is that something which occurred because there's just the dryer, it has to be utilised? There's a little bit of space in it, but the bottles are too tall, and so the space in it, but the bottles is reduced or they get smaller bottles; is that the is there is the where they	8	estimated 25 per cent growth in supply of fresh frozen	8	here but if we look towards the bottom of the screen,
a document we'll go to now, another letter from 11 [which he outlines elsewhere in the letter] and 12 Mr Watt. It's PRSE0002316. This is a letter which 13 gives us some insight into that particular difficulty 14 tray fault we expect to increase plasma process 15 that I was just describing but also more generally 16 into PFC's production capacity around this time. 17 So it's dated February 1982, it's from Mr Watt 18 In other words about 1,000 kilos a week. It is 19 paragraphs, Mr Watt said that: 19 "By the time of the March issue of Factor VIII 20 under the 'Pro Rata' scheme the PFC will be 21 substantially in debt to the regions." 22 He then refers to a "slowly gathering difficulty 23 because of freeze-dryer limitation at PFC. At present 24 we are getting 700 [kilos] of fresh plasma weekly and 25 can process up to 720 [kilos] in a full capacity week. 26 In deduction of cycle time by correction of the dryer are reduction of cycle time by correction of the dryer are reduction of cycle time by correction of the dryer are reduction of cycle time by correction of the dryer of the dryer are reduction of cycle time by correction of the dryer are reduction of cycle time by correction of the dryer of the dryer in the letter] and 24 size of the bottles are too tall, and so the 25 can process up to 720 [kilos] in a full capacity week.	9	plasma in six months.	9	Mr Watt says:
Mr Watt. It's PRSE0002316. This is a letter which gives us some insight into that particular difficulty that I was just describing but also more generally into PFC's production capacity around this time. So it's dated February 1982, it's from Mr Watt to Mr Cash. If we go down to the first couple of paragraphs, Mr Watt said that: "" this will help to make in road in the "By the time of the March issue of Factor VIII under the 'Pro Rata' scheme the PFC will be "Under the 'Pro Rata' scheme the 'PFC will be of the dryer, it has to be utilised? There's a little bit of space in it, but the bottles are too tall, and so the size of the bottles is reduced or they get smaller bottles; is that the is there is the where they	10	We can see some of those issues reflected in	10	"In summary, with the new shelf in the dryer
gives us some insight into that particular difficulty 13 tray fault we expect to increase plasma process 14 that I was just describing but also more generally 15 into PFC's production capacity around this time. 16 So it's dated February 1982, it's from Mr Watt 16 In other words about 1,000 kilos a week. It is 17 to Mr Cash. If we go down to the first couple of 18 paragraphs, Mr Watt said that: 18 " this will help to make in road in the 19 "By the time of the March issue of Factor VIII 20 under the 'Pro Rata' scheme the PFC will be 20 SIR BRIAN LANGSTAFF: So the new shelf in the dryer, is 21 substantially in debt to the regions." 21 that something which occurred because there's just the 22 He then refers to a "slowly gathering difficulty 23 because of freeze-dryer limitation at PFC. At present 24 we are getting 700 [kilos] of fresh plasma weekly and 25 can process up to 720 [kilos] in a full capacity week. 26 bottles; is that the is there is the where they	11	a document we'll go to now, another letter from	11	[which he outlines elsewhere in the letter] and
that I was just describing but also more generally into PFC's production capacity around this time. So it's dated February 1982, it's from Mr Watt to Mr Cash. If we go down to the first couple of paragraphs, Mr Watt said that: By the time of the March issue of Factor VIII under the 'Pro Rata' scheme the PFC will be substantially in debt to the regions." He then refers to a "slowly gathering difficulty because of freeze-dryer limitation at PFC. At present we are getting 700 [kilos] in a full capacity week. Take to Mr Cash. If we go down to the first couple of paragraphs, Mr Watt said that: " this will help to make in road in the stockpile and also keep up with input." SIR BRIAN LANGSTAFF: So the new shelf in the dryer, is that something which occurred because there's just the dryer, it has to be utilised? There's a little bit of space in it, but the bottles are too tall, and so the size of the bottles is reduced or they get smaller bottles; is that the is there is the where they	12	Mr Watt. It's PRSE0002316. This is a letter which	12	a reduction of cycle time by correction of the dryer

9	It's set out with as much detail as we've been able to	9	continuing."
10	provide in the written note, although there's not much	10	The next paragraph, sir, I don't know if I'm
11	in the way of documentation about it. The arrangement	11	misreading it, or perhaps if a word is missing, it
12	appears to have been that around the start of 1983,	12	reads:
13	Dr Ludlam agreed with Dr Mayne that Scotland would	13	"So far as I know, our stock level is low, and
14	send commercial product to Northern Ireland, and in	14	indeed the total stock situation within the SNBTS is
15	exchange, Dr Mayne would return some of the PFC	15	at present very healthy, and I wonder if there is some
16	product that had been sent to Northern Ireland to	16	specific reason why the exchange [is] still
17	Edinburgh and Scotland.	17	necessary"
18	We have got a letter that I'll briefly take you	18	I don't know if that should read: "As far as
19	to about that arrangement from the end of	19	I know, our stock level is not low and indeed the
20	December 1983. It's LOTH0000005_071. Thank you. So	20	stock level in the SNBTS is very healthy." In other
21	this a letter from Dr Brian McClelland to Dr Ludlam,	21	words: "We've got lots of stock. Why do you need to
22	end of December 1983, by which point, as we'll see,	22	keep receiving it from Belfast?"
23	the arrangement has been in existence for some time.	23	And I'll take you very briefly to the response
24	This is essentially Dr McClelland asking	24	from Dr Ludlam. That's LOTH0000005_085. Have I taken
25	Dr Ludlam whether this arrangement was intended to	25	you to the wrong there you are. Thank you.
	67	20	00
	OI .		68 (17) Pages 65 - 68

Sir, this is January 1984. Dr Ludlam responding to Dr McClelland:

"Thank you for your letter ... about exchanges of commercial factor VIII with Belfast. The exchange was agreed early in 1983 because at that time SNBTS factor VIII was in very short supply. The first part of the exchange arrived shortly after the negotiations, and at the time, SNBTS material markedly improved. The material that has arrived recently just completes the exchange. As I understand it, we are now quits with Belfast."

So it seems to be an exchange that lasts effectively for a year, 1983, early 1983 to the start of 1984.

I won't take you to it, sir, but in the written note it's worth being aware that Professor Cash doesn't seem to have been aware of this arrangement. He writes a letter in January 1984 to Dr Mayne saying that he's just been made aware that there was this arrangement for this exchange, asking to be filled in effectively with the details, highlights some concerns. I'll just read out what he says in his final paragraph. He says:

"Am I right that this arrangement exists? If so, could you illuminate. On the face of it, this

The second point about the international context, I'm afraid I'm not able to assist the Inquiry much further with that at this stage, suffice to say it may be that it's necessary to investigate that claim further before accepting that it's accurate.

Towards the end of November -- towards the end of 1983, November 1983, the supply situation at PFC is getting to a point where there's concern that so much Factor VIII is being produced and added to the national stockpile that some of it is in danger of becoming out of date. Factor VIII obviously has a limited shelf life.

You can see that in the November 1983 memo from Dr Perry, an internal PFC memo. He notes that the previous year, the stockpile was 5 million units. It's grown to 7 million units. He starts to question whether some steps should be taken to reduce that stockpile.

There's a series of statements and claims that are made from September 1983 to quite a bit later in -- for example, from the DHSS, the Scottish office, suggesting that by this point Scotland had become either self-sufficient or virtually self-sufficient in blood products, as set out in the note that we're picking up from a chronological perspective.

development looks a little worrying, AIDS, etc, and I'm anxious to help as much as possible."

Now, that gets us to later in 1983 and into 1984 and it appears, when we get to this period, that Scotland is at least on one measure, depending on how you define it, getting close to self-sufficiency in Factor VIII. A number of claims begin to be made that Scotland is now self-sufficient in Factor VIII. I won't take you to it, but there's a letter from July 1983 from Mr Watt in which he is informing Professor Cash of his resignation from the PFC, so he announces the resignation in 1983. He stays on for a few more months before Dr Perry takes over.

In that letter, Mr Watt says that Scotland has become the first country in the world to be truly self-sufficient in plasma fractions. Now, I'm not going to comment any further on that claim, sir, aside from highlighting two points. The first is the suggestion that Scotland itself was self-sufficient at this point, July 1983, will have to be considered in the light of some of the figures that we're about to look at from 1983, and indeed 1984, on product usage in Scotland. They seem to suggest that in 198 -- both in 1983 and in 1984, commercial products, commercial Factor VIII were still being used.

The next document I'm going to turn to, which examines this issue of self-sufficiency, is a paper prepared by Professor Cash. It's at PRSE0001556. Sorry, I think this is actually the minutes of the meeting, rather than Professor Cash's paper.

So Professor Cash prepared a paper in advance of this meeting. It's another meeting of Haemophilia Directors and SNBTS directors, February 1984. If we turn over the page and we focus on the section 5, "Review paper from SNBTS", this section of the minutes is -- reflects a discussion of a paper produced by Professor Cash.

The first point, sir, is worth noting:
"Details of the amount of fresh plasma
[produced] for Factor VIII concentrates and the issues
of concentrates indicated that the production level
was about right. However, trends over the last
five years indicated that the SNBTS production of
Factor VIII concentrates may be exceeding clinical
demand, and the current stocks at RTCs appear to be
increasing."

I'll pick up subparagraph (ii), there's a discussion about the continuing use of cryoprecipitate at this time, February 1984:

"Members discussed the suggestion that the

(18) Pages 69 - 72

production of cryoprecipitate could now be reduced. Dr Ludlam said that cryoprecipitate was preferred in the treatment of children at present, because of the new danger of AIDS. Dr Hann concurred. A policy seemed to be emerging however to use less cryo for haemophilia A patients. It was agreed that a certain minimal amount of cryo was required and Dr Cash pointed out that [Transfusion Directors] could produce it in emergencies."

If we go down the page, point (iv), I won't go into the detail of this now but it's just worth noting that Dr Cash, during the course of this meeting, suggests that the time might be right to introduce a batch dedication system. The reason for that is to reduce the number of batch exposures per patient per year, so this is early 1984. I'll come on a bit later to when batch dedication was introduced by the PFC but it appears to be the case that it wasn't introduced until sometime later, end of 1984, early 1985.

I'll then pick up point (v):

"Dr Cash asked members to consider whether, given the present SNBTS production level of factor VIII concentrates, it was necessary to purchase commercially unless exceptionally a superior product was available."

meeting took place. I won't take you to those documents. What they concerned was a proposal for Scotland, in view of its supply position, to send more of its Factor VIII products to Northern Ireland and to England and Wales. There's a paper by Professor Cash from May 1984, the title of it is "Proposal for the Decanting of Excess Factor VIII Concentrate to Northern Ireland and England and Wales".

He sets out in some detail the background to that proposal in the paper. He makes a number of proposals at the end of it. He suggested the first priority in the disposal exercise should be Northern Ireland, and that's disposal of Factor VIII concentrates which are surplus to Scottish needs, and suggests that the residual surplus be offered to the CBLA, ie England and Wales. He also suggests that some consideration should be given to charging for the arrangement.

There's a meeting which Professor Cash's proposals are accepted. That takes place on 23 May 1984.

We can then see what I believe is that proposal and agreement reflected in a letter between Dr Morris McClelland in Northern Ireland and Dr Mayne, and we'll just go to that document. It's NIBS0001718.

I take the reference to a "superior product" being available to mean, as an example, a higher purity product for certain kinds of patients.

If we go over the page, we can see recorded a discussion involving the Haemophilia Directors about their preferences and approach to commercial versus PFC concentrates, so it's the top of the page:

"Dr McDonald said that the adult centre in the West was totally satisfied with the NHS product and that it was no longer necessary to purchase commercially. Dr Hann however found himself in the position of having inherited 30,000 [units] of commercial factor VIII which was rapidly going out of date and which he was prepared to dispose of.

"Dr Ludlam said that he required to have a small stock of high purity commercial material ...

"Dr Bell [who is there on behalf of the Scottish Home and Health Department] emphasised that the aim of the SNBTS and the national policy was for Scotland to be self sufficient, and although the Department would not wish to intervene in what clinicians prescribed, it was not sensible to purchase imported material when suitable NHS product was available."

In May 1984, sir, a document was prepared by Professor Cash and a blood transfusion subcommittee

It's not very easy to read because of the quality of the copy. You can see the date at the top, 21 May 1984, and if we go down, please -- thank you -- I'll pick up the first paragraph where the issue is introduced.

"Some changes have recently taken place in the arrangements for the supply of blood products from Scotland and I thought it would be appropriate to update you."

Thank you. "Factor VIII concentrate", Dr Morris McClelland says:

"This has been produced in considerable excess of demand in Scotland during the past year or two with the result that the present pro-rata arrangement for supplies (in proportion to input of fresh frozen plasma from Transfusion Centres), this has been abandoned at least for the present.

"On a pro-rata basis we would now be entitled to receive Factor VIII at the rate of about 1.8 million units per year. (The increase has resulted partly from increased plasma supply and partly from increased yields during fractionation). With this new, more flexible arrangement we could certainly obtain more than this -- at least 2.5 million units per year."

Then the next paragraph:

(19) Pages 73 - 76

1 "I am aware from conversations with you that you would be sending this product to RTCs. Because their 2 are not at present planning to use this amount but you 2 supply position is strong, they don't need it, they're 3 may find this information useful for future planning." 3 therefore offering it to England and Wales. 4 Now, it's not clear from the documents we've 4 We can go to Dr Lane's response to that proposal 5 looked at, in the context at least of this 5 just very quickly, CBLA0001912. I should say that in 6 presentation, why Dr Mayne might not have been 6 Dr Perry's letter making the offer, he made reference 7 proposing to use that amount of NHS product. We'll go 7 to tentative evidence in relation to the AIDS 8 on to look in a moment at some tables showing 8 infectivity of commercial products. In other words, 9 9 consumption figures in Northern Ireland, as well as question marks around AIDS infectivity of commercial Scotland, which show that a significant amount of 10 products, so would you therefore like to have this 10 Scottish product? Dr Lane's response that we have 11 commercial product is still in use at that time. But 11 12 this is a reflection, at least, I believe, of 12 here, November 1984, says: 13 13 Professor Cash's proposals to change arrangement --"Thank you for your letter about those batches 14 those arrangements with Northern Ireland. 14 of factor VIII which are outside your defined finished product specifications. Whilst I entirely take the 15 As for England and Wales, in October 1984, 15 16 Dr Perry, who by this point had become acting director 16 point you are making, I do not feel that it is in at PFC, wrote to Dr Lane at BPL to offer around 2,000 17 17 order to step outside normal regulatory practices, vials of Factor VIII, equating to about 460,000 units. 18 18 even in our current complicated situation with AIDS. 19 In the letter, Dr Perry said that these vials of 19 In the same way that we would not release material 20 Factor VIII had failed to meet certain product 20 which failed our quality control, regardless, I do not 21 specifications, things like solubility time, in other 21 think that we would wish to circulate material in 22 22 words these products were taking longer to dissolve, a similar category." 23 certain other technical specials. 23 That's Dr Lane there refusing that offer to take 24 Dr Perry says in the letter that, if there was 24 product from Scotland. 25 any shortfall in Scotland of PFC product, then they 25 Now, that addresses Factor VIII during this 77 78 1 period. I made some references already to Factor IX. 1 to Factor VIII for the 1970s and 1980s suggest that 2 2 For completeness, I'm going to pick up just a few the supply position in relation to a Factor IX 3 other parts of the chronology briefly. The written 3 concentrate DEFIX was strong. There generally weren't 4 note during this section separates out Factor VIII and 4 issues with supplying and producing enough of it. 5 Factor IX. That is because the stories become 5 I've already picked up in Professor Cash's 6 different in important respects. The chronology of 6 January 1981 paper the comment where he says: 7 7 products that are introduced at different times become "Because of the much smaller number of 8 8 different, and that's the reason why we've separated haemophilia B patients than A, the supply of these 9 9 them out. products [ie Factor IX concentrates] is always more 10 I'll highlight just a few points, sir. On the 10 than adequate." 11 early history of product used to treat haemophilia B 11 He makes reference to an exception, I believe, patients in Scotland, we've referred in the note to 12 that's one year, in 1979, where the supply drop. 12 13 a 1973 article, journal article, which sets out some 13 In January 1983 Professor Cash suggested that of that history. It suggests that, until 1967, fresh the supply position with regards to DEFIX remains 14 14 frozen plasma was the only product available to treat 15 strong. The issue from PFC to RTCs is reasonably 15 16 16 haemophilia B patients. stable. At a January 1983 meeting of SNBTS and 17 In 1967, the PFC, which was then known as the 17 Haemophilia Directors, it was noted that the supply 18 BPU, began producing a concentrate which contained 18 position of DEFIX over the last five years, so 19 Factor IX, known as PPSB. But then in 1971, and the 19 five years to 1983, have remained strong and the 20 article was concerned with the development of this 20 demand reasonably stable. 21 product, a new concentrate is developed, which also 21 There's a reference in the documents to a supply 22 22 contains Factor IX, and this is the product which difficulty that seems to arise around the middle of 23 becomes known as DEFIX, and it seems to be introduced 23 1983. It appears to be related to the use of DEFIX 24 routinely from around 1971. 24 for haemophilia A patients with inhibitors. So,

25

around this time, clinicians start to try to treat

80

25

Most of the documents I've covered in relation

79

1 haemophilia A patients with inhibitors with DEFIX, annual returns from haemophilia centres. 2 that has a knock-on effect on the supply of DEFIX, and 2 You can see at this page, we can set out the 3 3 there are difficulties with keeping up with demand. annual returns that apply to Scotland with the URNs in 4 We set out in the note how that issue plays out. 4 footnotes at the bottom. So as we go through the 5 It continues into February 1985. 5 figures in the tables if any Core Participants, legal 6 Now, sir, that completes the chronological part 6 representatives at any point want to interrogate any 7 of this section of the presentation. At this point, 7 of the figures, check whether we've got them right, if 8 8 I was intending to turn to some of the annexes and they want to look into particular issues, all of the 9 9 sources for the data should be set out in those figures that the Inquiry has produced. We've got 10 10 a bit of time still, I believe before the lunch break, footnotes 11 so I don't know if you want to break now or if I can 11 One effect of using the returns as the source of 12 continue on. I've got some time left. 12 data means that the narrative and the figures only **SIR BRIAN LANGSTAFF**: Let's use the time, shall we? 13 start in 1976. That's the earliest date for which we 13 14 MR BOUKRAA: Thank you. 14 have returns. 15 So if we can get that the annexes up, Sully, you 15 Those returns are probably the most accurate should have them at INQY0000344, thank you. 16 16 guide to the consumption of these different factor 17 concentrates during this time period that we have. 17 Now, before we go in to the detail of the 18 18 figures in the tables, there are a few points I should But there are also, in some of them, gaps, issues with 19 explain. This is a set -- a document which contains 19 how the data is recorded, and it's important to be 20 all the annexes accompanying the presentation. 20 aware of them. What we've done in the tables is tried 21 Annex A, which we have the first page of here, sets 21 to flag any of those issues so that readers can be 22 22 aware of them as they're looking at the tables and at out consumption of Factor VIII and then Factor IX 23 concentrates in Scotland and Annex B does the same for 23 the figures. 24 Northern Ireland. Both Annex A and Annex B and both 24 Lastly, sir, I've already said that we'd use the 25 the Factor VIII and Factor IX figures are based on 25 word "consumption" here rather than "demand" for this 81 82 1 table. 1 cryoprecipitate. In some of the annual returns, as 2 2 In fact, that wasn't quite lastly. One more we've seen during the Haemophilia Centre presentations 3 introductory point to note, these are consumption 3 and hearings, cryoprecipitate was sometimes recorded 4 figures, rather than production figures. That may be 4 in a number of bags or packs. Generally speaking, 5 an obvious distinction but it is an important one to 5 we've translated that into 70 units per pack, which 6 bear in mind because, in some of the documents, 6 correlates with some explanations which are sometimes 7 7 given in the returns. Obviously, all cryoprecipitate there's reference to production, ie how much the PFC 8 8 was producing each year. Figures for consumption are, figures are estimates, even when there's a number 9 9 recorded in the return. That's based on an estimate of course, different. 10 So we can turn, please, to page 2. So this is 10 of units per pack, and of course a point to bear in the table setting out -- actually, can we have --11 11 mind. 12 yeah, that's fine. That'll do for now. Thank you. 12 When we've set out the figures for 13 These are the figures recording in Scotland 13 cryoprecipitate consumption, that also -- they include consumption of Factor VIII products, going from 1976 the figures for patients with von Willebrand's. For 14 14 to 1990. You'll be able to see that there are 15 much of this period patients with von Willebrand's 15 16 16 footnotes which appear next to some of the entries, were treated with cryoprecipitate. Now, what that 17 for example 1981, 1982. In fact, also, at the heading 17 means is that the comparison, at least for some of the 18 at the top, next to "Cryoprecipitate", there are 18 period, between cryoprecipitate and factor 19 footnotes. 19 concentrates becomes less direct because 20 If we pan back out, please, Sully, and go into 20 von Willebrand's patients generally weren't treated

21

22

23

(21) Pages 81 - 84

the data, some of them make more difference than others. There's one I wanted to pick up here because it does make a material difference to the tables we're going to go on to look or the figures -- the charts we're going to look at. It's the Edinburgh data for

Now, the annual return for Edinburgh in 1981 is only very faintly legible. We can just about make out the figures for cryoprecipitate. Unfortunately, it's not possible to make out what the figures were for NHS or commercial concentrates. That's an important caveat to bear in mind when we go on to look at the tables

Now, the data here has been used to create, first of all, a graph and then a set of bar charts. So if we can go on to the next page, I'm going to spend less time on this one. We can see how the figures have translated. The blue line is NHS PFC Factor VIII concentrate. The orange line is cryoprecipitate. The red line is commercial concentrate.

We can see that commercial concentrate is at a low level in the early period, increases a little up to about 1980, starts to decrease again to reach very low periods in 1984, and low figures in 1984 and, in

different definitions of that term, sir, but one way of defining the term might be: were patients treated with domestic product only or were they also treated with imported product?

We can see that Scottish patients are treated with some commercial concentrate, which is the red block, relatively small amounts at the end of the 1970s, a larger amount in 1980. There's the figures for 1981, although they come with that same health warning because of the Edinburgh gap. Relatively small amounts of commercial concentrate, there's still some being used in '82, '83, a very small amount in '84 and then no commercial concentrate recorded used in '85, '86, '87, which coincides with the introduction of heat treated Factor VIII in Scotland.

If we look at the figures for cryo, we can see, starting in 1976, relatively steady levels, small increase in 1981, then the figures start to drop off. Then PFC Factor VIII, reasonably steady levels in the second half of the 1970s, a significant increase in use in 1980. I'll ignore 1981 for the reason I've given before. Then from '82 onwards, we can see that PFC Factor VIII becomes, by some distance, the greatest -- represents the greatest proportion in use of these products from '82, '83, '84 onwards.

fact, when we get to 1984 onwards, we'll see just how far the figures drop.

Cryoprecipitate, relatively steady until 1980, and then starts to decrease. The use of PFC concentrate increases slowly in the 1976 to 1979 period. There's a significant jump in 1980.

I haven't interrogated, sir, the exact reasons for that jump. It may be related to Professor Ludlam's arrival in Edinburgh. As I understand it, he changed the treatment policies in Edinburgh to have more of a focus on the use of concentrate, rather than cryo.

I should say the dots represent years. On the blue line, after 1980, here there's a suggestion of a drop in 1981. That is likely to be a somewhat artificial figure because, in 1981, we don't have the return data for Edinburgh for its use of concentrate. Then we can see the figures increasing from '82 up to '84, dropping down and then increasing again as we move through the second half of the 1980s.

If we go on to the next page, please, Sully, again this is the same data that's recorded in the tables, this time translated into a bar chart. This might be a helpful chart for trying to assess whether or not self-sufficiency was achieved, when it was achieved. Now, I'm not going to go into all the

I haven't yet covered heat treatment. I'll do that very briefly, but we can see that when we get to '88, by which time all factor concentrates, at least, are heat treated, commercial products make a reappearance, '88, '89, '90.

So, sir, that's the picture for Factor VIII in Scotland that we've been able to establish from the data. I'll look more briefly at Factor IX. If we go over the page, please, Sully. So we started again with a table of figures. I won't go through it in as much detail. A few caveats to note in -- a few caveats to note in footnotes that people can come back to. It's a bit easier to see from this table what the position is, because we can see, in the right-hand column, "Commercial Factor IX". Most years, no use of commercial Factor IX recorded, other than 1980, 1981.

If we go on to the -- in fact, can we go straight to the chart, so I think it'll be the bar chart two pages on -- you can see these figures translated into this bar chart. They are mostly blue, so it's mostly NHS Factor IX concentrate that's being used. Small amounts of commercial Factor IX in 1980 and 1981.

In contrast to Factor VIII, commercial Factor IX makes a reappearance in 1985. I'll come on to explain

very briefly the reasons why that happened. In short, it's related to the introduction of a PFC heat treated Factor IX, during the course of 1985, being later than the commercial heat treated Factor IX product then available.

In other words, clinicians got to 1985, PFC wasn't yet able to provide heat treated Factor IX, so they started buying some commercial heat treated Factor IX.

We'll turn briefly to Northern Ireland. If we go to the next page, please. So this is the introduction to Annex B, which covers Northern Ireland. Again, similar points and caveats are summarised at the top. We'll start with Factor VIII on the next page, please.

A similar table is set out. We'll see this when we go on to the graphs and the charts but, as we've covered during the course of this presentation, it's important to be aware that there was a change in the arrangements for Northern Ireland, BPL -- or BPL/PFL generally providing Factor VIII concentrates up to 1982, PFC taking over in 1982.

In fact, if we just look at this table for a moment, and if you see the column for NHS Factor VIII, and we move down the figures from the late 1970s to

89

concentrate don't increase immediately, my understanding is that because the Northern Ireland arrangement was a pro rata one in PFC, it took some time for Northern Ireland to increase the amount of fresh frozen plasma that it was collecting and was able to supply to PFC, so it took some time to increase the amount of PFC Factor VIII that it was receiving in return.

And the last -- the next page, please, Sully. Factor IX. I'm not going to go through the figures in this table. If we could go through two pages on to the bar chart for Northern Ireland. So this is the position for Factor IX in Northern Ireland, and we can see some commercial Factor IX had been used in 1976/77, almost as much commercial Factor IX used as NHS Factor IX in 1978, and then no commercial Factor IX used again before 1990, by which time it will have been heat treated.

Sir, that takes me to the end of this section of the presentation. I was intending next to turn much more briefly to the arrival of heat treatment in Scotland and in Northern Ireland. I will finish that portion of the presentation and the presentation overall in time for Mr Hill to take over to cover pool sizes. I wonder if it might be a convenient moment to the early 1980s, we'll get to 1981, 122,000 units, then we see a very significant drop to 12,000 units in 1982. That's the changeover year.

> I took you, sir, yesterday afternoon, to the Northern Ireland return for 1982, which records that NHS Factor VIII was only available in November and December of that year.

> If we can go over the page, please, Sully. We can see here a different picture in Northern Ireland than in Scotland. So, again, the red line is commercial concentrate, the blue line is NHS Factor VIII. Up to 1982, that comes from BPL, and then comes from PFC. The orange line is cryoprecipitate.

If we go on to the bar chart, please, on the next page. Thank you. We can again see a different picture emerging from the one we just looked at in Scotland. In short, much more red, which means much more in the way of commercial concentrates. particularly in the period up to 1982. Still significant amount of -- amounts of commercial concentrate being used in '83 and '84. Still commercial concentrate being used in 1985, though by that stage it may have been heat treated. One of the reasons for explaining why the figures for NHS PFC

90

break for lunch now. I then anticipate that I'll be

able to try and finish things in the early part of the

afternoon SIR BRIAN LANGSTAFF: Yes. Well, shall we break then now until 1.50? 1.50. (The Luncheon Adjournment)

SIR BRIAN LANGSTAFF: Yes? g 10 MR BOUKRAA: Sir, I'm going to continue much more briefly now with an overview of the introduction of heat 11 12 treatment of PFC products. I'm going to start by 13 returning to the annex that we looked at earlier, a different part of it. 14

> Sully, it's that document INQY. If you could go through, please, to page 15. Now, this is a table of products, PFC concentrates, that we've prepared in the Inquiry team. This table contains PFC concentrates -products that were routinely issued. It doesn't contain all of the various products that were being developed, were sometimes issued for trial but were not issued routinely.

It provides a helpful route map and an overview of where we're going to go. As you can see, it's divided into Factor VIII and Factor IX and I'll just

92

(23) Pages 89 - 92

pick up a few dates in the middle column for Factor VIII. We can see the very early introduction of Factor VIII concentrate, Cohn Fraction I in 1956, then the next date, 1974, that's PFC's standard intermediate Factor VIII concentrate, sometimes known as NY and the NY prefix refers to a link between PFC and colleagues at New York University.

Then, you can see, we go from 1974 to

Then, you can see, we go from 1974 to December 1984, when PFC's first heat-treated product is introduced. There's then a series of other heat-treated products. The first one that's introduced is dry heat treated for two hours at 68 degrees. The next one is introduced around September/October 1985. It's a similar product again, 8Y, with some stabilisers added. Dry heat treated at the same temperature, 68 degrees, but this time for 24 hours. Then the next date, it's half cut off at the bottom, it's April to May 1987. It's a product which becomes known as Z8, April/May 1987.

If you go on to the next page, Sully, you'll just be able to see -- that's perfect, thank you.

That's a product which is dry heat treated again for 72 hours, initially at 75 degrees and, eventually, for 80 degrees.

We can contrast -- I won't pick up the 1991

took place in Germany, in Bonn, in October 1980 that was attended by Professor Cash. During that conference the German company, Behringwerke -- I'm sure I pronounced that wrong -- report that they have been able to heat treat a Factor VIII product using pasteurisation, pasteurisation as opposed to dry heat treatment. Pasteurisation, I think, like Mr Hill said, is more like a water bath, dry heat treatment is more like an oven.

You can get a sense of the reaction to that claim from a letter that Professor Cash wrote to Mr Watt on 27 October 1980. He briefly described what was -- what the company was saying, this German company was saying and he ends with:

"Sounds unbelievable. Thought you might be interested."

As we're looking at heat treatment in this very early period, the focus is on trying to inactivate hepatitis, hepatitis B, and then also non-A, non-B hepatitis in Factor VIII concentrates.

I'll pick matters up in late 1981, the following year, when the SNBTS, through Professor Cash, establishes the Factor VIII study group. Now, the Factor VIII study group looks at a whole series of different issues and problems relating to Factor VIII.

product which changes approach. We can contrast that Factor VIII timeline with the Factor IX timeline, which is in the right-hand column. So the story starts in 1967, I've covered already, PPSB, 1971, the haemophilia B patients, that's replaced by DEFIX. We can then see that the next key date for Factor IX is August 1985 when a heat treated Factor IX product, DEFIX, was introduced.

Two points to note about that introduction. First of all, as you can see from this table, it's later than the heat-treated Factor VIII product. The second point is that it is heat treated for longer at a higher temperature from the first iteration, and that remains the same product through the rest of the time period that we're looking at.

Sir, that's just to provide an overview of where we'll be going with some of these heat-treated products and I'm going to turn to a very brief chronology that goes back in time to the early 1980s, and I'm really just going to pick out a few key dates, focusing on Factor VIII first.

So far as the Inquiry has been able to identify, PFC and the wider SNBTS first begin to look into the possibility of heat treating Factor VIII concentrates in late 1980. That seems to follow a conference that

It establishes a subgroup, the Safety Action Group, which focuses on viral inactivation.

Now, that group meets in January 1982, prepares a first report around March 1982. At least in that early period, it's made up of a Dr Cuthbertson from the PFC, two other members, Drs Pepper and Sommerville, so includes non-PFC members as well from the wider SNBTS. A report is prepared by that Safety Action Group on possible viral inactivation of Factor VIII, considering different methods, considering the possibility of inactivating hepatitis.

By the time of a March 1982 meeting of the Factor VIII study group there was a discussion of the proposals. At that time, the suggestion of the Safety Action Group was that proposals to achieve a hepatitis reduced Factor VIII product -- and that was how it was phrased at the time, "hepatitis reduced product" -- would take time and considerable investment. It was thought that this could not be achieved in less than two years. So in March 1982, the suggestion to produce a hepatitis reduced product, Factor VIII product, would be around two years.

The group continues investigating viral inactivation through the remainder of 1982, there are various important parts of the chronology that are

(24) Pages 93 - 96

picked up here in the written note, including meetings internationally that Dr Foster attends, and various other meetings and reports that are prepared, but I won't go into the detail of those now.

By the time we get to October 1982, the Factor VIII Study Group is suggesting that it's first option, preferred option for viral inactivation, is heat treatment. Now, the context for that is that, in this early period, various other possible viral inactivation methods have been considered: irradiation, for example; treatment with detergents; there's more of a focus at this point in heat treatment. The kind of heat treatment that the group is focusing on is pasteurisation.

Alongside that focus on pasteurisation, what we can see in these documents from this early period is a belief that part of the key to producing a successfully virally inactivated Factor VIII is to have a higher purity concentrate, so there investigation into producing high purity concentrates, alongside investigations into pasteurisation.

That gets us to around January 1983. This work is ongoing. There's some discussion on the relationship between this work on heat treatment and self-sufficiency. There's a meeting of SNBTS and

months of 1983, reference begins to be made to AIDS. In the first references that we can see that are set out in the written note, there's not always a direct link between AIDS and PFC's heat treatment strategy, but a direct link is made soon thereafter in May 1983 and it's a document I'm going to bring up.

Sully, it's PRSE0001111. I'll just check I've got the right --

Sir, all I'm going to do with this document is highlight the context and read out some of the passages. It's an important document. As you'll see, it's drafted by Dr Foster, so I'm not going to suggest any inferences or meaning that might be drawn from it beyond what's set out in the document. Before we go to that, it might just be worth noting the date, 3 May 1983. Now, the direct reliance of this document, for present purposes, is to try to work out what the impact was for reports of AIDS on PFC's heat treatment strategy. It also has a place in the Inquiry's wider investigation into knowledge and understanding of the risk of AIDS and how that was communicated to patients.

I've mentioned the date, 3 May 1983, because it is almost exactly of the same date as the message which went out from Professor Bloom through

Haemophilia Directors on 21 January 1983, during which Mr Watt explains or sets out, rather, this link explicitly. I'll just read out a couple of -- part of the passage that's recorded in the minutes. It's said that:

"Mr Watt explained the problems which had to be overcome in preserving acceptable yields and providing a product which was not too expensive, considerations that were of less importance with the commercial product."

Around this time, early 1983, commercial producers of early factor concentrates were also trying to market virally inactivated products. He said:

"During the meeting, Directors were made aware of fierce competition facing the PFC from commercial concerns and were asked to bear in mind the state of policy for the Scottish Health Service to be self-supporting in blood products. The PFC would have limited amounts of heat-treated Factor VIII available for trials in the near future, and the Haemophilia Directors agreed to support the PFC as much as possible in the development and clinical trials of the NHS product."

So that gets us to early 1983. In the first few

The Haemophilia Society to patients about AIDS and what the reaction should be to AIDS. Now, I'm not suggesting there's any direct link between Dr Foster, the PFC and Professor Bloom, but when we're looking at how the AIDS risk is set out in this document and how the AIDS risk was set out in that Professor Bloom communication to patients, it's worth just noting that

timing.

SIR BRIAN LANGSTAFF: Well, the two days before was 1 May,

it was a Sunday, and that's when the Sunday paperscarried articles concerning the risk of AIDS. So talk

of "killer blood". So that may well have something in the mind of anyone who was concerned with producing

something which might transmit the cause of AIDS.

MR BOUKRAA: It may well have been, sir. I'll obviously
 leave that Dr Foster, who is giving evidence.

17 SIR BRIAN LANGSTAFF: Yes.

MR BOUKRAA: But you're quite right, sir: those articles
 appeared and, in fact, they prompted the message from
 Professor Bloom. A request went out to him from
 The Haemophilia Society in response to those articles,
 saying "Please can you prepare a message for patients
 as a result of what's been said". I think he drafts
 it around 3 May, it goes out the following day.

If we can scroll down, please, Sully, just to

The Safety Action Group was still continuing its work during this period. It met again on 15 June 1983, and I just want to take you to a record of its meeting very briefly. It's PRSE0003460. I just want to highlight two passages. If we
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	that people will err on the safe side. MR BOUKRAA: It looks like that, sir. I should clarify this is Dr Foster SIR BRIAN LANGSTAFF: The word "err" is simply adopting a colloquial expression. It's not a suggestion that they will be in error to do so. MR BOUKRAA: No, sir. Just for the transcript rather than you, sir, this is a Dr Foster memo rather than Mr Watt's. SIR BRIAN LANGSTAFF: I'm sorry. He can explain what he had in mind. MR BOUKRAA: Yes, quite. SIR BRIAN LANGSTAFF: Thank you. MR BOUKRAA: I'm not going to comment too much on what all of this might mean. Dr Foster is meant to be here SIR BRIAN LANGSTAFF: Ultimately, it's for me having listened to submissions. MR BOUKRAA: Yes. Then the final passage on this page: "ii) There are some who would find a move back to cryo attractive, and if this gathers momentum (it would only need one suspected case from NHS Factor VIII), we can see our fresh frozen plasma	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	"There may therefore be a case for accelerating our heat treatment programme. While I do not disagree with point (2) above [I believe point (2) is about plans for building a full-scale plant], it may be possible to introduce an intermediate stage still using the pasteurisation cabinets. We probably have most of the equipment to allow us to do this already." He then sets out some detail of the technical process that would be involved in the rest of this memo. Sir, that's all I wanted to take from this document for now. In the written note, we've recorded that it appears that a change of approach was agreed at the PFC as following this memo in a meeting which may have followed it. I believe that that involved scaling up the pasteurisation product, but I'll allow Dr Foster and Dr Perry perhaps to explain that further. The Safety Action Group was still continuing its work during this period. It met again on 15 June 1983, and I just want to take you to a record of its meeting very briefly. It's PRSE0003460.

date and those who were present. These are the members of the Safety Action Group, so there's Dr Cuthbertson of the PFC, and then there's two other members, reflecting -- who are not from the PFC, reflecting that this is part of a wider SNBTS initiative.

If we go down to the bottom of this page, there's a summary there of the approach of PFC to heat treatment at this time. It says:

"Considerable progress had been made at PFC in producing heat treated Factor VIII, and clinical trials should start towards the end of the summer in Glasgow and Edinburgh. No infectious model for non-A, non-B has been produced yet. The putative 'AIDS' virus must be considered as a potential hazard in Factor VIII concentrates."

A lot of this document involves technical issues relating to viral inactivation. There's one more passage I wanted to draw out that links into the wider context, and that's at page 5, please, under the heading "AIDS". It's just the first two or three sentences:

"Although not proven to be a virus, this apparently infectious agent had been found in haemophiliacs in the UK. It would seem wise to try

might, during 1983, during the summer or later 1983, that they in fact started towards the start of 1984, January to March.

An important date in the chronology to note is January 1984, Professor Ludlam reports an adverse reaction in one of his patients who has been treated with this pasteurised trial Factor VIII. He reports symptoms like chest pain, retching.

Dr Forbes provides some -- a report of these early observations of the product in March 1984, with no adverse reactions. Now, during the remainder of the first half of 1984 and the beginning of the second, it appears that the focus of the PFC continues to be on producing a pasteurised Factor VIII product, and that's not to say that there weren't some -- wasn't some consideration given to dry heat treatment, I believe starting during 1983. I won't go into the details of that but, in terms of the overall focus, it seems that continued to be pasteurisation until later in 1984.

There's then a major shift that occurs in PFC's strategy. It appears to be linked to two events around the same time. The first is the discovery in October 1984 that a cohort of patients in Edinburgh who had been treated with PFC Factor VIII had

somehow to encompass AIDS inactivation along with hepatitis B and non-A, non-B inactivation schemes."

There's then a discussion of the impact of that on viral inactivation methods.

June 1983, sir, we've previously had a presentation on the first patient, of which the Inquiry is aware, in the UK with haemophilia, to exhibit symptoms of AIDS, one of Professor Bloom's patients.

SIR BRIAN LANGSTAFF: Well, he probably, it was said.

That's how it was reported to the NIBSC, that he probably had AIDS.

MR BOUKRAA: That's right, sir. There was a report on 6 May 1983 to the CDSC about this patient. It may be that that's the patient who was being referred to here. There was another patient in Bristol, I'm not quite so familiar with the chronology of that patient but my understanding is that it may not have become common knowledge until later in 1983 that there was a Bristol patient with AIDS too.

I'm going to move forward to the beginning of 1984. Now, Drs Foster and Perry will be able to correct me if I'm wrong, but my understanding is that the trials of PFC's first heat-treated Factor VIII products didn't take place, as it was thought they

developed antibodies to HIV -- HTLV-III, as it was then.

Now, the Inquiry has explored the timing related to that discovery and other evidence, no doubt it can be picked up with the witnesses we'll be hearing from so I won't go into it any further. Alongside that discovery, on the 1 to 2 November 1984, a plasma fractionation conference took place in the Netherlands, somewhere called Groningen. It was attended by Dr Foster, Dr Perry, and Dr McIntosh as well, of the PFC. During that conference it was reported that dry heat treatment appeared to successfully inactivate HIV.

Those attendees come back from the conference, there is a major change in the PFC's approach during the course of November and December 1983 to dry heating the existing PFC Factor VIII concentrate.

What appears to have taken place is that the stocks which existed of PFC NY, normal intermediate unheated product were heat treated from December -- a point in December 1984. That product begins to be sent out to RTCs in Scotland and also Haemophilia Centres, and the PFC and the wider SNBTS introduce or appear to introduce a policy of seeking to re-call unheated products that was at RTCs and was also in blood banks

108 (27) Pages 105 - 108

and possibly stocks of home treated product as well, although it may be that there's more to explore on those details.

So we get into 1985 and this first heat-treated product is being introduced. The type of treatment, as I said, was dry heat treatment, it was heated at 68 degrees for two hours.

Now, that gets us into 1985. I'm going to say very little about what happened with Factor IX during the period we've just looked at, the '83 to '84 period, other than to say that there was some early investigation into heat treating Factor IX during that period. Heat-treated products, Factor IX, is not introduced as we've seen also in December 1984. It comes a little later.

So we're into 1985. PFC is continuing to explore further the heat treatment of its Factor VIII product and, in particular, to explore different heat treatment viral inactivation regimes being applied to its product, not just 68 degrees for two hours. We've set out the detail of some of those attempts in the written note. What appears to take place is that, from around January to September 1985, the first heat-treated product, the first generation product, the 68 degrees for two hours is issued. From around

a batch dedication system.

It then comes in around March 1985, and I'm just going to go to a document which briefly explains it. It's PRSE0004101.

This is, we can see from the title, a PFC report that was prepared for a meeting in March 1985.

If we go through to page 5, please, there are other parts of this document that are certainly worth considering. It has an update on heat treatment. If we go down to the second half of the page, there's an explanation of the approach to batch dedication. It says:

"The ability to prospectively dedicate whole batches of product to individual patients or groups of patients depends, for success, on substantial reserves of product. Such reserves are now available and it is now possible to implement a system of limited batch exposure.

"Briefly, such a system would operate by dividing patients into groups (on a regional basis) with each group receiving product from a designate batch held at the RTC. RTCs would also carry reserve batches for replacement of 'active' batches where these became exhausted."

Then it sets out how groups of patients might be

September 1985, it's replaced by a second generation product which is heated at 68 degrees for 24 hours.

Now, as part of that policy of introducing the second generation of product, there appears to have been a PFC policy of exhausting existing stocks of heat-treated product before bringing in the second -- the new generation one. So, in other words, it may be that a product treated for 24 hours at 68 degrees was available earlier but, before it was introduced to RTCs and the patients, they would exhaust the first generation product, all of that would be used up.

The new product would be introduced through a batch dedication scheme that had, by then, been introduced at the PFC. I mentioned this briefly earlier. I'm going to go into very little detail about it, sir, save to note that, in the written presentation, we've picked up a suggestion from Professor Cash in 1983, November 1983, that the SNBTS and PFC might need to be considering some sort of batch dedication arrangement.

He raises it again, Professor Cash, at the 2 February 1984 meeting that we looked at earlier. There's then a period between February 1984 and early 1985 where it's not quite clear, at least from the documents, what happens to this proposal to introduce

divided up and then, at the bottom of this section of the report, it says:

"Present estimates indicate that such a system can be in place by the end of March 1985 with existing product which will sustain supply until Autumn 1985."

Now, it appears that a batch dedication system was introduced around this time, and that it remains in place until at least some time in 1987. The exact end date isn't completely clear from the documents.

So we're now into -- late in 1985, PFC's second generation heat treated Factor VIII, heated for 24 hours, is being issued. Research is being undertaken into a third generation of product and, so far as it appears from the documents, that appears to be because it was understood, at the time, that heat treating -- dry heat treating at 68 degrees for 24 hours should be successful in inactivating HIV/HTLV-III but was thought unlikely to inactivate non-A, non-B hepatitis. In other words, this 68 degrees, 24-hour product could still transmit non-A, non-B hepatitis.

We're done with that document now, thanks, Sully.

So there then begins focused or more research, rather, on this new product which becomes to be known

(28) Pages 109 - 112

as Z8. 1 patients who participate in clinical trials in the 2 There's -- it seems that there's a change of 2 case of an adverse reaction. Dr Ludlam had raised 3 3 this issue some time earlier. It had not been direction which happens towards the end of 4 December 1985, with the focus on this Z8 product, 4 resolved. Resolving it required the involvement of 5 which will involve heating for 72 hours at 80 degrees, 5 the Scottish Home and Health Department and others. 6 ie the same amount of time, the same temperature, as 6 We get to the beginning of 1987. Dr Ludlam 7 the BPL 8Y product, which we heard about last week 7 raises his concern again, and effectively appears to 8 say, "I'm not prepared to enter my patients into the 8 during the hearings on England and Wales. clinical trials of Z8 until this issue has been 9 9 I'm not going to go into all of the detail 10 resolved." 10 around the development of Z8. What would appear to There's some evidence that Haemophilia Centre 11 happen is that the product has been developed. Around 11 12 August 1986, there is some difficulties encountered in 12 Directors in other parts of Scotland adopt a similar 13 manufacturing it at a large scale, scaling it up from 13 position. There's correspondence back and forth with 14 the initial small test batches. There's a reference 14 a number of individuals, including at the Scottish 15 in a 29 August 1986 letter from Dr Perry to an 15 Home and Health Department. It appears around 16 11th hour problem with freeze drying. 16 February 1987 some form of compensation arrangement is 17 We get to late 1986, around December 1986, and 17 agreed, at least with the clinical trial aspect. 18 it appears that Z8, this new product, which it is 18 Trials appear to begin around February 1987 for Z8. 19 hoped will be effective against non-A, non-B hepatitis 19 We then get to April, and it seems that the 20 as well as HIV, is ready for clinical trial. 20 SNBTS and PFC, following those clinical trials, are 21 Now, while this product development was taking 21 ready to start issuing Z8 on more of a routine basis. 22 22 place, there had been a number of letters and some It seems, generally speaking, to be fed into that 23 discussions around what's termed in the documents 23 batch dedication system that we discussed and to 24 "compensation arrangements for patients". Now, what 24 reflect the policy of exhausting stocks. At least from the documents, there's a suggestion that those 25 this relates to is the arrangements for compensating 25 113 114 1 existing policies might be subject to a caveat for 1 I understand that to be -- might cause blood clots in 2 2 patients. That required an additional amount of certain patients, in particular patients who had 3 been -- not been treated previously with factor 3 testing involving animal studies. That is one of the 4 concentrates, or treated very little with factor 4 explanations provided for why heat treated Factor IX 5 concentrates, on the basis that they were understood 5 was going to be introduced later. 6 to be the highest priority for a new product which was 6 In the meantime, during the course of 1985, some 7 7 hoped to be effective against non-A, non-B hepatitis Haemophilia Centre Directors appeared to decide that 8 8 as well as other viruses. while they're waiting for the PFC to introduce its 9 9 Now, that's a brief overview of the position on product, they'll start buying some commercial heat 10 heat treatment of Factor VIII products. 10 treated Factor IX, and that will explain why, in the 11 Factor IX we've covered in a reasonable amount 11 graphs that we looked at earlier, there is an 12 of detail in the written note. 12 appearance of commercial Factor IX concentrate in 1985 13 As we get into 1985, with a heat treated 13 when there hadn't been before that. Factor VIII product in existence but no heat treated The reasons why the Factor IX heat-treated 14 14 15 Factor IX, Haemophilia Centre Directors start to ask 15 product that is introduced around August 1985 by the 16 16 PFC what might be happening and when they might expect PFC is immediately at the higher end of the heat 17 a heat-treated Factor IX. Around that time, and in 17 treatment regimes that we've been considering --18 fact even before from some years previously, there's 18 80 degrees for 72 hours -- is related to the nature of 19 an explanation that in order to introduce a Factor IX 19 the Factor IX molecule as against a Factor VIII 20 heat-treated product, there might be additional 20 molecule. I won't try to provide any more explanation 21 complexities because of the need to ensure that the 21 for that issue. 22 22 product is not going to result in -- I always That gets us, sir, to the end of 1987 and more 23 23 pronounce this wrong -- thrombo -or less to the end of this presentation. In the 24 SIR BRIAN LANGSTAFF: Thrombogenicity. 24 written note we've covered the 1988 period to 1991. MR BOUKRAA: Thrombogenicity. Sir, thank you. 25 I don't propose to go through any of the details now.

1 For those who'd like to review that portion of 2 the written note again, what will become apparent is 3 that, in the later 1980s, Scottish Haemophilia Centre 4 Directors start to purchase heat-treated product, 5 including heat-treated Factor VIII products, again, 6 rather than just relying on Z8. The reasons for that 7 are set out in the written note. There is also, 8 during this period, another arrangement between 9 Professor Ludlam and Dr Mayne in Northern Ireland to 10 exchange PFC products for commercial products, and we 11 set out the chronology of that agreement and some 12 correspondence which points to the reasoning and the 13 rationale behind it. 14 Sir, that was all I was intending to say in the 15 oral presentation for Scotland and Northern Ireland. 16 As I've said many times, there's more detail in the 17 written note. I'm going to be handing over now to 18 Mr Hill, who is going to be dealing with pool sizes, 19 sir, but I wonder if before that, it might be 20 appropriate to take a short break. 21 SIR BRIAN LANGSTAFF: Well, let's take an early break in 22 that case, and come back at 2.50.

(A short break)

117

of different data sets, different figures, some correlation, more correlation perhaps here than in other cases. But there is, I'm afraid, a little bit of leaping from one set of material to another.

I will go through what those sources show in terms of figures and present that in tables and in some graphs. Then we will go back and look at some of the underlying documents to see what they can tell us about the reasons behind the increases, and about the processes involved, although, as a spoiler warning, there is only a limited amount of material that the Inquiry legal team has been able to discover on that.

I'm also conscious that you will hear evidence in the coming days from Dr Snape, for England and Wales, and Drs Perry and Foster covering Scotland. As ever, we do not seek to pre-empt that evidence. They may be able to shed some more light on this.

Before turning to what is covered in the presentation, there is, as ever, a pre-history to the growth of plasma pools in the 1970s. We don't have a great deal of evidence about plasma pool sizes in the '60s and '70s at the moment but more work can be done on that area in due course.

What we do have, are little fragments, which may help to set the scene before we pick up the story

(2.49 pm)

Presentation to the Inquiry on the size of pools of plasma used in domestic production of blood products by MR HILL SIR BRIAN LANGSTAFF: Yes, Mr Hill?

5 MR HILL: Sir, we are turning now to two presentations on pool sizes used in fractionation, firstly in England 6

and Wales and then in Scotland.

All of the qualifications that usually apply to presentations given by counsel to the Inquiry apply to these as well, and I won't repeat those here. The focus is going to be on Factor VIII, in terms of the pool sizes. We have some data for Factor IX but it is much less satisfactory, unfortunately.

I'll start with the England and Wales presentation. There is a written presentation that goes alongside this, and similarly for the Scottish presentation as well. It may be that people find it easier to read the written presentation than to reflect back on the transcript today because there are a lot of figures which are going to be given and I'm afraid it might be quite hard to follow at points but we'll do our best.

In England and Wales, the focus of the presentation is on BPL. There are various sources that we will look at. I'm afraid it's the same story

118

again in the mid-'70s, from where we have much more data, not least because that is the area which the HIV Litigation focused on.

If we could go first, please, Sully, to HCDO0000581, page 1, please. This is an article that has been introduced before the Inquiry and I'm certainly not going to go through it in any detail. It is an article from the British Journal of Haematology in 1974, Volume 26, page 313 by Dr Rosemary Biggs, entitled "Jaundice and Antibodies Directed Against Factors VIII and IX in Patients Treated for Haemophilia or Christmas Disease in the United Kingdom."

As I say, I'm not going to go into the substance of that article. What I am going to take you to at page 6, please, Sully, is a table that Dr Biggs gives us that shows the material given to haemophiliac patients in Oxford from 1969 to 1971, to quote the words which she used in the article.

We can see three years are given, 1969, 1970, and 1971. The table includes information about the number of patients treated and then gives figures for the different types of material that those patients were treated with, plasma, cryoprecipitate and Factor VIII concentrate. If we look at the last of

120

(30) Pages 117 - 120

1	those for each of the years, Factor VIII concentrate,	1	of plasma fractionation. Later, we're going to move
2	in the final column we can see the mean pool size	2	on to the factory stage or the industrial stage, where
3	given in terms of the number of donations that went	3	far more factor concentrates are being produced. But
4	into the pool. For 1969, that mean pool size is 160	4	that is a figure that we have for 1969 to 1971 in
5	donations. In 1970 it is 192 donations. In 1971 it	5	Oxford.
6	is, again, 192 donations.	6	The next document we're going to take you to in
7	That is from the PFL in Oxford. We can see from	7	terms of history is CBLA 0000253.
8	the preceding column that for those years the number	8	This is a memorandum from Dr Bidwell of the PFL
9	of pools fractionated were 83 in 1969, 72 in 1970 and	9	to Dr Maycock, then director of BPL, dated
	80 in 1971.	10	22 January 1975.
10 11		11	It is entitled "Number of donations in a batch
	In the presentation, the general way of		
12	translating donations into the size of a pool or vice	12	of factor IX", and I'm going to come back to this
13	versa is to adopt an assumption that, at this time,	13	document when we're talking about Factor IX
14	about 180 millilitres of plasma was given per	14	specifically. But for now, I'm just going to take you
15	donation. Some sources have it at a little higher,	15	to the first sentence. Dr Bidwell wrote, and I quote:
16	some have it a little lower, but we've adopted	16	"When we talked about labels at Elstree in
17	180 millilitres.	17	November we agreed to have printed on the label for
18	Using that figure, the pool sizes would be about	18	factor VIII that it was derived from 'not more than
19	30 litres to 35 litres, expressed as volume, rather	19	500 donations' and that we would cease putting on the
20	then donations, according to this table.	20	precise number of donors whose plasma had gone to make
21	When comparing this to the later figures I'm	21	up the pool."
22	going to give you, it is important to emphasise that	22	That is where I will stop for now. What this
23	these come from the PFL in Oxford and not BPL, which	23	appears to be saying is that, before this discussion
24	is where the later figures come from. Second, as	24	in November 1974, the label on a bottle of BPL
25	Dr Lane put it, this was at the cottage industry stage	25	Factor VIII would have the exact number of the amount
	121		122
1	of donors whose plasma had gone into that bottle.	1	not in reply to the previous memorandum, but it does
1	The agreement that was reached in November 1974	2	refer to donor pool numbers.
2	-	3	
3	was that, instead of doing it that way, the label would carry the words "Not more than 500 donations".		Dr Maycock wrote: "Thank you for your memorandum of 3rd December,
4	•	4	1975.
5	We'll come on and look at some labels shortly.	5	
6	SIR BRIAN LANGSTAFF: So it might mean well, it	6	"As we increase preparation of Factor VIII
7	obviously means less, the 500 donations or less. It	7	concentrate we propose to increase the size of pool as
8	could be 500 donors at most, but it may be less if,	8	far as labelling is concerned in two steps during 1976
9	for instance the donors had given more than one	9	and 1977:
10	MR HILL: Yes.	10	"Present 150 [litres] 830 donations
11	SIR BRIAN LANGSTAFF: donation.	11	"1976 270 [litres] 1500 donations
12	MR HILL: Again, in the presentation, we have assumed that	12	"1977 360 [litres] 2000 donations
13	one donation equals one donor. We're on safer ground	13	"[Numbers] of donations are based upon
14	doing that in England and Wales, and indeed in	14	180 [millilitres] of plasma per donation)
15	Scotland, than we are with commercial concentrates	15	"The large pool size can be defended on the
16	because plasmapheresis isn't generally being used. So	16	ground that starting plasma and concentrate are tested
17	a donor will be giving, at most, two donations a year.	17	by RIA.
18	So it's unlikely they will end up in the same pool.	18	"I think PF Lab and BPL should keep in step.
19	The exception is the plasmapheresis donors, but they	19	"Therefore I would like you to introduce steps
20	are a relatively small number in the UK at this time.	20	of 1500 and 2000 donations in the size of plasma pools
21	If we could take that down, please, Sully. The	21	for Factor IX concentrate.
22	third document I will take you to is BPLL0003721.	22	"I think the number of donations should be shown
23	This is a memorandum from Dr Maycock to Dr Bidwell	23	on the Factor IX label as well as on the Factor VIII
24		24	label "
	from 8 December 1975, so approximately 11 months later	24	label."
25	than the one that we have just looked at, and it is	24 25	We'll come back, again, to the question of

ı	ractor in. For present purposes what i draw your	1	production facility.
2	attention to is this: firstly, as of 3 December 1975,	2	MR HILL: Yes. Yes. It's also relevant to note that in
3	the present pool, as expressed at least in terms of	3	this memorandum, Dr Maycock says:
4	labelling, was 830 donations, being a plasma pool of	4	"I think PF lab and BPL should keep in step."
5	about 150 litres, and you'll see that Dr Maycock uses	5	SIR BRIAN LANGSTAFF: Yes.
6	that 180 millilitres figure as a way of translating	6	MR HILL: Now, the qualification to that is that the
7	from donations to litres.	7	memorandum as a whole is talking about labelling, but
8	You'll see that there is a plan to increase the	8	whether or not that translates to actual donation
9	size of the pool from 150 litres to 360 litres between	9	sizes is not wholly clear, but he does say:
10	December 1975 and December 1977, and that will be	10	"I would like you to introduce steps of 1,500
11	an increase from 830 donations to 2,000 donations.	11	and 2,000 donations in the size of plasma pools for
12	I had brought you to that document because	12	Factor IX concentrate."
13	that is the first one that appears in the tables in	13	I'm going to turn now to the two sets of
14	the written presentation that I'm going to show you	14	contemporaneous documents that we have that help to
15	shortly. But, as we can see from the documents that	15	set out the maximum limits on pool sizes in the 1970s
16	proceed it, there has already been a growth in pool	16	and the 1980s at BPL. These are primary sources, in
17	size by that time.	17	the sense that they come from the time that they are
18	SIR BRIAN LANGSTAFF: Well, we've moved from Biggs's 160	18	describing. It is important to note that they are
19	average number of donations in a pool through to	19	about the maximum limits and, in terms of labels that
20	180 to CBLA, not more than 500 donations, to 830,	20	are placed on bottles and correspondence about what
21	1,500, 2,000.	21	the maximum limit could be, it doesn't necessarily
22	MR HILL: Yes, we had switched centre, at that time, as	22	follow that the maximum was being used at the time,
23	well, from Oxford to BPL, but yes.	23	but we will see in due course we have some other data
24	SIR BRIAN LANGSTAFF: But if the yes, it's no longer	24	on that which correlates relatively closely.
25	the cottage industry we're looking at; it's the	25	The first set of documents that we're going to
	125		126
1	look at are some BPL product labels from the 1970s and	1	production of this batch."
2	the 1980s. I note that I'm not going to be going to	2	We're having a little difficulty spinning it
3	product labels from Scotland because Ms Richards is	3	around, but I hope people can see that on the
4	going to be looking at those in due course with	4	right-hand side of the label, written bottom to top,
5	witnesses, so I won't pre-empt that.	5	as it were. Thank you, Sully.
6	If we could turn, please, Sully, to CBLA0009269.	6	SIR BRIAN LANGSTAFF: Ah, there we are.
7	This is a label from a BPL Factor VIII bottle, which	7	MR HILL: So 1,500 donations that's it. Thank you
8	is dated, according to the date at the bottom of the	8	or less than 1,500 donations 1,500 plasma donations,
9	document, March 1976. We don't have any reason to	9	used in the production of this batch. That is
10	doubt that date, even though the label itself is not	10	March 1976.
11	filled in.	11	If we could now go, Sully, please, to
12	If we look at the left-hand side, we can see	12	BPLL0001692_008. If we could go to the second of
13	that it says, the label says, "Prepared by Blood	13	those labels, please. This is a label sorry, if we
14	Products Laboratory, Lister Institute, Elstree,	14	could just pull out for a second, Sully. Thank you.
15	Herts."	15	This is a label that comes from a bottle that
16	That is BPL.	16	was fractionated, according to this sheet, on
17	The label is entitled "Human anti-haemophilic	17	11 September 1980, and the Factor VIII assay date is
18	fraction", and we can see the bottle contents are said	18	3 October 1980. So we're in the autumn of 1980.
19	to contain Factor VIII, and there is a gap left for	19	If we can now please expand it, please, Sully.
20	saying how many international units are contained in	20	We can see again that this has been prepared by
21	the bottle. There are instructions about how to	21	BPL in Elstree. It is said to contain Factor VIII,
22	reconstitute the concentrate.	22	250 international units. It is an intermediate purity
23	Then on the right-hand side, we can see on the	23	product. If we look on the left-hand side, first of
24	label:	24	all, we can see that less than 5,000 plasma donations
25	"Less than 1,500 plasma donations used in the	25	were used in the preparation of this batch.

1	If we could turn it back around, Sully, to its	1	SIR BRIAN LANGSTAFF: I think that may be so small you can
2	original orientation, and expand the central part of	2	hardly see it, but it's
3	the label.	3	MR HILL: I have read it on the computer. I am confident
4	This label contains the warning:	4	it's
5	"The preparation is of human origin and cannot	5	SIR BRIAN LANGSTAFF: I can read it but I'm just thinking
6	be assumed to be free of hepatitis virus."	6	about those who are watching it at a distance or maybe
7	That is a warning that was not on the previous	7	on a home screen.
8	label from 1976.	8	MR HILL: Yes.
9	Thank you, Sully.	9	SIR BRIAN LANGSTAFF: So I think they can be assured that
10	The next label we will look at comes from	10	it is there. If they need further assurance, they can
11	7 January 1983. It is BPLL001692_009.	11	go into the actual document itself, those who are Core
12	BPL0001692_009. Apologies, Sully.	12	Participants, and can do so into the Relativity or
13	The top label is, if we could just pull out	13	catch it online.
14	a little, please, Sully, we can see a date at the top,	14	MR HILL: All of these figures are set out at paragraph 12
15	"Date effective", 7 January 1983. Then if we could	15	of the written presentation. I'm going to bring up
16	zoom in on the label, please. Again, the warning is	16	that table in a second, and the references to the
17	there:	17	underlying documents are there as well. So they can
18	"The preparation is of human origin and cannot	18	be checked in that way.
19	be assumed to be free of hepatitis virus."	19	SIR BRIAN LANGSTAFF: Thank you.
20	We can see that the batch number is HL and then	20	MR HILL: I'm now going to go to a document which
21	the batch number is given. HL is the intermediate	21	contains
22	purity product that was produced by BPL.	22	SIR BRIAN LANGSTAFF: Can we just go back to that page,
23	On the left-hand side, we have the words "Less	23	the original page?
24	than 7500 plasma donations were used in the production	24	MR HILL: BPLL0001692_009.
25	of this batch."	25	SIR BRIAN LANGSTAFF: I'm looking to see if because the
	129		130
1	second label is about a year later, isn't it?	1	confirms those dates but we can say that we haven't
2	MR HILL: The second label is March '85 and concerns 8Y.	2	found evidence which disproves those dates given.
3	There's a document which helpfully sets out a number	3	The first one, pre-June 1985, if we could expand
4	of different labels including labels for 8Y and gives	4	that, please, Sully. This is stated to be for
5	dates for them.	5	an intermediate purity product with no heat treatment
6	SIR BRIAN LANGSTAFF: Well, this one does actually have	6	and that fits with what is on the label and fits with
7	a figure in it. If you look underneath "Dried	7	those labels we have just seen.
8	Factor VIII Fraction", and look at the wording	8	On the left-hand side, a little bit more clearly
9	underneath that, underneath the warning:	9	this time, you can see that it says, "Less than 7,500
10	" the preparation is of human origin (less	10	plasma donations were used in the preparation of this
	than 10,000 plasma donations used per batch)."	11	batch."
11 12	MR HILL: Yes.	12	So that is in keeping with what we have just
13	SIR BRIAN LANGSTAFF: So albeit that it's 8Y, it's heat	13	been looking at. The warning there, "The preparation
14	treated, we have moved from less than 7,500 in	14	is of human origin and cannot be assumed to be free of
15	January '83 to 10,000 or less sorry, less than	15	hepatitis virus", is also consistent with the labels
16	10,000 in 1985.	16	we have just seen.
17	MR HILL: Yes, that's right. We can see that helpfully on	17	If we could go to the second of those labels,
18	the document BPLL0002039. We have three labels set	18	please. This is stated to be from June 1985 to
19	out and before we go to any of them you can see on the	19	February 1987. It is for a high purity HT3 product,
20	right-hand side, added to those labels, written next	20	which is 8Y. We can confirm that it's 8Y because, in
20	to them by whoever has prepared this document, are the	20	the bottom right-hand corner of that label, you can
22	words "Pre-June 1985", "June 1985 February 1987"	22	see the code "8Y1".
23	and "February 1987 onward".	23	As with the label that you just went to, sir, it
24	Now, we don't go who put these dates there, we	23	says:
25	can't say that we have found evidence that absolutely	25	"Warning: the preparation is of human origin
	131	20	120
	101		132 (33) Pages 129 - 132

(33) Pages 129 - 132

(less than 10,000 plasma donations used per batch). It has been subjected to heat treatment, in the vial, to reduce the risk of infection by viral agents (including hepatitis and AIDS viruses) but cannot be assumed to be free from risk of infection."

If we could then expand and go to the final of these three labels, it's stated to be from February 1987 onward and for FHC1. I have to say I'm not entirely sure what FHC1 stands for there. It is also stated to be barcoded, and we can indeed see a barcode in the bottom right-hand corner. It is also stated that there is no donation limit. That is confirmed by looking at the section on the warning, which now reads, and I quote:

"... the preparation is of human origin. It has been heat treated, in the vial, to reduce the risk of infection by viral agents (including hepatitis and AIDS viruses) but it cannot be assumed to be free of the risk of transmission of viral infections."

So the same warning as the previous label but with the reference to the product being derived from less than 10,000 donations removed. It is stated to be a dried Factor VIII fraction, high purity heat treated.

If we could just go to one further document,

I have given you a duff reference. It's INQY0000345, not 375. Sorry, my mistake. This is the written presentation. The labels I've just taken you to and some others are included in this table, and we can see how the maximum pool size on those labels increases from 1,500 donations in the March 1976 label; up to 5,000 donations on the September 1980 label; then 7,500 donations on the January 1983 label; 10,000 donations on the March 1985 label; and then from June 1985, according to the document we saw.

Then no stated limit from February 1987 onwards, according to the document that we saw and according to our own research, as we've found that on a label from June 1988. It is important to note that we cannot say that the label changed on 11 September 1980 just that we have a label from that date which shows 5,000 donations, whereas the previous label we'd found from 1976 has 1,500.

The second source that we have from the time itself which helps us to understand the maximum limits on BPL pool sizes are references that are contained in correspondence, and particularly correspondence between people at BPL and people at PFL, about what the maximum pool sizes are. I'm not going to take you to the documents, but I will take you to the table

which helps to bear out what I have said about the fact that we can't establish, from our own research, that those dates are correct, the material that we have seen is consistent with them. To make that point, could we go to BPLL0016009_161.

If we could look at the top left-hand corner there is a date given for "Date effective", which is 15 February 1988. The batch number is FHC. The label below, which is stated to be a sample label, is headed "Dried Factor VIII Fraction, High Purity: Heat Treated". We can see on the left-hand side that "8Y" is stamped on it. A barcode in the bottom right-hand corner, and the warning is this:

"... the preparation is of human origin. It has been heat treated, in the vial, to reduce the risk of infection by viral agents (including hepatitis and AIDS viruses) but it cannot be assumed to be free of the risk of transmission of viral infections."

Again, no reference to the number of donors.

Thank you, Sully. If we could take that from

the screen and if we could, instead, put up, please, INQ0000375, the tables on page 5 and 6, please.

Sorry, INQY0000375. The tables on pages 5 and 6. It's the presentation itself.

Just give me a moment, sir.

which is at the same reference, Sully, at page 7.

We can see table 2 at paragraph 16 contains four references. The documents are given their unique IDs in the right-hand column. The information that we have obtained from those documents give maximum pool sizes of 5,000 donations in October 1980, 7,500 in January 1982, 10,000 in June 1985, and then 25,000 in June 1986. We will come back and look at that document a little later.

That correlates closely with the labels that we have looked at, the additional piece of information coming from the June 1986 data suggesting 25,000 donations at a time when there was no limit stated on the labels on the bottles themselves.

We also have some secondary sources which help us to check and to test the information that we have received from the primary sources.

The first is a series of estimates about pool size given by Dr Terry Snape during the course of the HIV Haemophilia Litigation. Dr Snape is going to be coming to give evidence next week, so this may be something that we pick up with him then. But for now, I will show you the table that is in the written presentation at paragraph 27 which records Dr Snape's estimates. These were given in response to a request

So that is what we get from Dr Snape's estimate.

A further secondary source that we have, a set of documents which are entitled "Batch histories". If we could go, please, Sully, to CBLA0014475. If we stay on this page for a second, we can see that this is a document that is prepared during the HIV Haemophilia Litigation. As with other such documents, we don't have a final document because the litigation was settled. So these kind of working papers weren't finalised, but they do provide us with some information from those who had been working on the case, as of 1989 and 1990, putting the documents that they had to hand in order.

If we could go to page 168, please. These are

If we could go to page 168, please. These are the batch histories that we have. It is really a list of batch numbers, the year issued, and then a column saying, "Number of donors". Then columns about whether or not the product has been heat treated, whether it has been tested for HIV or the pool has been tested for HIV.

The column stating "Number of donors" is not explained further. So we don't know whether they are basing this on a precise figure or on a maximum label, or what the basis of the number of donors is.

Thank you, Sully. We can take that off.

that figure of 6,000 donations remains constant. But at some point in 1986 the approximate number of donations increases to 7,000 and that is also the figure given going into 1987, and that is where the batch histories table stop. So an increase from 2,250 in 1978 to 1979, to 7,000 at some point in 1986.

Of note there, sir, I've pointed out here it's reflected in some of the other data as well, but it's perhaps easier to point it out on this table, that that period between some point in 1982 and some point in 1986 sees a plateauing of approximately 6,000 donations per batch, after a period of increase before, preceding a period of increase afterwards.

The final table that I will take you to, which is from paragraph 43 of the written presentation, is a table that is drawn from contemporary reports that we have from BPL. When I say reports, these are reports that are given in letters, in memoranda, in minutes, and indeed in more formal reports as well in publications.

If we could go, please, to page 16 of the same reference. The table goes over into page 17 as well, please, Sully.

These are figures that we have extracted from various pieces of information that we have got from

Having looked at the batch history, we have produced a table which is at page 12 and just going over into page 13 of the written presentation. If we could have that, please, INQY0000345.

Thank you, Sully.

Something to note here is that the batch history sometimes shows changes in donation numbers but it doesn't give a specific date for when that change has occurred. In order to be able to present this in tabular form, we have used January and July of a given year to reflect a change during that year. But that does not mean that the change came in July 1980, it's just our way of showing that during the year it changed, and the table is set out this way so that it can feed into a later graph.

We can see that the approximate number of donations, according to the batch history figures, were 2,250 in 1978 and 1979. That figure went into 1980 but, during 1980, it increased to 3,000 donations. That figure again went into 1981 but, during 1981, it increased to 4,500 donations. That is also the figure that we have for 1982 -- at the start of 1982, sorry -- but during that year it increased to 6,000 donations.

From 1983 to 1985, and even going into 1986,

the relevant periods. There are a series of caveats that go with them, which are set out from paragraph 36 of the written presentation. We have discussed those as we've been going along, sir. They are about the size of the -- sorry, the translation between volume and donation numbers, and weight and donation numbers, and weight and volume, and the one donor to one donation ratio that has been used.

It bears repeating that the figures that are contained in this table are, therefore, approximations. They show a trend, but they cannot always be relied upon to be precise at that particular moment

The first entry is the one that we looked at, at the start of this presentation, which is the 830 donations that Dr Maycock said was the present figure on 8 December 1975.

The next entry for 11 January 1978 -- I'm not going to take you to the underlying documents, the next entry is 2,000-plus donations, 11 January 1978. At the 18 January 1978 the figure is 3,000 donations. Then other figures from 1978 are given by reference to volume, 400 litres, which translates at 2,200 donations if one takes 180 millilitres as the measure.

1979 and 1980, we can see an increase up to

144 (36) Pages 141 - 144

1 600 kilograms, about 3,330 donations. We understand 2 that to be linked to the Stop-Gap programme and I will 2 3 3 for the entirety of that year. come back to that shortly. 1980, 5,000 donations, for 1 September. 4 4 5 A different figure at 3 September 1980, 3,500 5 donations. Now, this is not to say that pools were 6 6 7 necessarily fluctuating at this time. It may be that 7 8 8 we just have these little snapshots of data which may 9 refer to the maximum possible size, whereas the 3,500 9 10 10 donations refers to an individual pool that was 11 fractionated at that level. 11 increased. 12 A figure for March 1981 is 2,504 donations; but 12 13 April 1981, 5,000 donations; February 1982, more than 13 14 3,000 donations; April 1985, 1,200 kilograms, which 14 15 equates to about 6,660 donations. 15 16 Later in March 1985, 7,200 donations; in 16 17 17 June 1988, so a significant gap there, three years, a 2,000-litre pool which would be a little over 11,000 18 18 have just looked at. 19 donations; and then April 1990, so again another gap 19 20 of two years, 25,000 donations, going -- said to go 20 21 into a plasma pool. 21 22 April 1991, 20,000 donors; and 17 May 1991, 22 23 13,000 donations. 23 24 So these are little snapshots from different 24 25 times, and, again, I stress they're helpful to show 25 145 146 1 later into the '90s, whereas the other data stops in 1 figure in it, if that makes sense. 2 the 1980s. 2 SIR BRIAN LANGSTAFF: Yes. 3 So that graph illustrates that the tables that 3 4 we have been looking at tell broadly the same story. 4 5 Then if we could turn over, please, to page 19. 5 6 SIR BRIAN LANGSTAFF: Yes, well, if you put a -- try to 6 7 7 just envisage a line of best fit between those various and from the correspondence. 8 8 data sources, it might look pretty much like 9 9 a straight, upward line without any great increase in 10 its rising up. So it's not a bell-shaped curve, not 10 the sort of curve we've been used to seeing in respect 11 11 of coronavirus. 12 12 13 MR HILL: No. That's right. Until 1986, 1987, 1988, at 13 the point where the new BPL opens. And, granted, that 14 14 we have far fewer data points after that, there does 15 15 16 16 seem to be a sharp increase --17 SIR BRIAN LANGSTAFF: At that stage. 17 18 MR HILL: Yes. 18 19 Another point to note about this graph is that 19 20 in order to capture that late surge in pool size, if 20 21 that's what it was, it's been necessary to extend the 21 22 22 vertical axis up to 25,000 donations. So, inevitably, 23 23 That was for Factor VIII. As I say, the if one does that, then the rises in donor size at the

24

25

24

25

start of the period look more modest than they would

147

look if the vertical access was a -- had a smaller

a trend, and it shouldn't -- one shouldn't alight on a single figure and say that is what the pool size was Two graphs help to show this situation. First, same reference, please, Sully, page 18, please. The same caveat applies as I gave a few days ago, that data points on this graph are joined by a straight line but it shouldn't be assumed that there has been linear growth between those two data points. In fact, often you will see a step up when a pool size is There are three lines shown on this graph. The one in purple are -- is drawn from Dr Snape's estimates that we looked at earlier. The one in green is drawn from the batch history that we looked at earlier. The one in blue is drawn from the contemporary records table which is the table that we The point that I take from these figures is that they correlate fairly closely up to January 1985. There is then less data in the later '80s, but again, there seems to be a correlation of a growth in pool size and steep growth after about 1986, 1987, so at the time of the redevelopment of BPL. Then the contemporary records go much higher, because they go MR HILL: If we could go over, please, to page 19. The same three lines are shown on this graph and this is just to compare them to the data that we have about maximum limits of pool sizes from the product labels The product labels are shown by the yellow line, and the correspondence is shown by the red line. I think it is fair to say from that graph that the maximum limits are higher than the data points that we have from the other sources -- Dr Snape's estimates for batch history and the contemporary records -- with a couple of exceptions which are very close to the line and may just be quirks of the way that the data has been put together. So it would appear from that graph that while the donation size of -- while the pool size has grown in the period, it has not exceeded the maximum pool sizes given, either on the labels which accompany the product or in the correspondence with it. Thank you, Sully. That can be taken down now.

Factor IX data is, I'm afraid, much less satisfactory.

148

If we could go to INQ0000345, page 20, please.

1 I've given you the wrong reference again, sorry, sir. 2 INQY0000345. This is, at paragraph 52 in the 3 table that is shown there, the best that we are able 4 to do with the information that we have about the size 5 of Factor IX pools at BPL from 1983 to 1987. We can 6 see that the figures there contain the smallest batch, 7 the largest batch, and the mode figure, which is the 8 figure that appears most often. That is, we think, 9 the better measure than an average figure at the time, 10 given the data source that we've got. 11 These are taken from the batch history documents 12 that were compiled as part of the HIV Litigation. As vou will see, it's far less extensive than Factor VIII 13 14 data. 1983 to 1985, the smallest batch, the largest batch and the mode are all 6,000 donations. In 1986, 15 16 we see that the smallest batch and the mode are 6,000 17 donations, so the most common pool size in 1986, from the data that we have, was 6,000 donations. But the 18 19 largest batch was 24,000 donations. 20 Now that may be explained by the fact that in 21 1986 your standard production was 6,000 donations, 22 that there were experiments run or a batch run at 23

24,000 donations. Then in 1987, the smallest batch is 8,000 donations. The largest batch is 20,000 donations, and the mode, so the most common batch, is

25

But I would like to take you to the document that we looked at earlier, sir, because it does raise a question that we will perhaps come back to in evidence in due course.

It is CBLA0000253, please, Sully. This is the minute from Dr Bidwell to Dr Maycock, dated 22 January 1975. We looked at the first sentence earlier, which was about the conversation they had had about labels at Elstree, and it was agreed that they would now say not more than 500 donations.

What Dr Bidwell goes on to say is this, and

"Mr Snape has pointed out to me that the batches of factor IX prepared from the Elstree material correspond to much higher than 500 donations and that the exact number is not known to us. If we pool the smaller batches here we know the number but again it is more than 500. I have told Mr Snape to have printed on the new labels 'not more than 1000 donations' but the whole subject of having anything at all on the label seems difficult. It is certainly not much of a guide to the clinicians any longer. Can we discuss this, please?"

Now, frustratingly, we don't have a document

18,000 donations.

If we could then, please, Sully, go to page 22 of the same document. This is a table that is drawn from the contemporary report that we have for BPL Factor IX so the same approach that we took to Factor VIII. Unfortunately, it's difficult sometimes to discern whether the references in the documents are specifically to Factor IX or whether there is an assumption that what applies to Factor VIII will also apply to Factor IX. That may not have been a safe assumption for the reasons that we'll come on to in a second.

But we can see there the figures obtained for January 1978 is over 2,000 donations; then a second figure a week later of 3,000 donations; July 1978, 400 litres, approximately 2,200 donations; April 1981, 5,000 donations; December 1984, 1,200 kilograms or 6,600 donations; June 1988, 2,000 litres, or a little over 11,000 donations; April 1990, 25,000 donations; April 1991, about 20,000 donors, which we equate to 20,000 donations.

Those are the figures that we have.

If we can have page 23, please, Sully. We can see a graph again showing similar rise to that which we've seen for Factor VIII.

150

setting out Dr Maycock's reply, and it may be that there never was such a document; the discussion may have been an oral one.

I am conscious that Mr Snape, or Dr Snape as he now is, is going to come and give evidence, so I won't speculate about what this means. But I will raise one possibility, which is that there is evidence to suggest that Factor IX was sometimes fractionated from Factor VIII pools which had been used to produce Factor VIII and then were re-pooled in order to make Factor IX and, if that is right, then it may be that there is a -- potentially a larger donor pool which went into a Factor IX product than a Factor VIII product. But as I say, Dr Snape is giving evidence next week, and we may return to that in due course.

Those are the figures, then, that we have for BPL. I'm going to go to a couple of documents now, which may shed some light on why the pool sizes increased and the processes involved.

If we could start with CBLA0000149, please, Sully. If we expand the top half, please.

This is a memorandum which is entitled "Notes on an outlined scheme for preparation of Factor VIII concentrate from 1,000 litres of plasma per week".

This document doesn't have a date, but from the

152

(38) Pages 149 - 152

1 context of it, we know that it was before March 1974. week, and that will increase the amount of product 2 I take that from paragraph 5 of the note, which I'm 2 that is produced at BPL. 3 3 There are then technical discussions about what not going to take you to but refers to a timetable 4 being achieved by March 1974, so we know that this 4 will be needed in order to achieve that is. 5 document preceded March 1974. 5 Then, Sully, if we could go, please, to 6 6 BPLL0003721. This is Dr Maycock's memorandum of the What it says is that, and I quote: 7 "This scheme is intended to use, as far as 7 8 December 1975, which we went to earlier. 8 8 possible, existing facilities in the lab. I highlighted earlier that the present pool size was 9 9 "1. Pool sizes: 250 litres, 4 per week." given as 830 donations 150 litres. The plan was to 10 250 litres would equate to about 1,375 donors. 10 increase that pool size -- if we could go down, 11 If we look just below where the handwriting is, 11 please, Sully -- to 270 litres and then 360 litres. 12 we can see these words: 12 Then Dr Maycock said, and I quote: 13 "The present working capacity of the large plant 13 "The large pool size can be defended on the 14 for 1,500 litres of plasma weekly includes 200 litres 14 ground that starting plasma and concentrates are 15 tested by RIA." 15 of supernatant from fresh plasma." 16 Now, it's hard to piece together what is 16 That's radioimmunoassay. That is the test for 17 contained in this document but what it appears to be 17 hepatitis B surface antigen. So that is the is a proposal to move from fractionating plasma in 18 "defence", to adopt the word used by Dr Maycock, 18 19 pools of unknown quantity, but amounting to 200 litres 19 that is being put forward for expanding the pool at 20 per week, possibly one pool at 200 litres per week but 20 that time. 21 we don't know that. Possibly that 200 litres could 21 Another memorandum from Dr Maycock, which 22 22 I won't ask to be brought up on screen but is referred have been split into different pools. But what is 23 proposed is a pool size, a new pool size of 250 litres 23 to at paragraph 63(b) of the written report, comes 24 and, as I say, that's about 1,375 donors. 24 from 19 March 1976, where Dr Maycock agreed to the The suggestion is to do that four times per pool size of PFL Factor IX being increased to 25 25 153 154 1 500 litres, and he said that he was agreeing this "On 1 which have to be made, there is a trend towards larger the understanding that the final pool is prepared from 2 2 pools, in order to lessen the amount of testing and 3 two or three sub-pools, each of which has passed its 3 reduce waste of valuable material." 4 safety tests, including RIA test for the presence of 4 The reference is given at paragraph 64 of the 5 HBsAq." 5 written presentation. 6 So, again, a reference to the fact that testing 6 Moving toward 1977 and 1978, we get to the 7 7 is being linked to the increase in pool size. period of the Stop-Gap programme that we discussed 8 8 I note from that memorandum that there is before. And at that size, and as we heard, part of 9 9 the Stop-Gap programme involved increasing the size of a reference to the Factor IX being prepared from two 10 or three sub-pools, which may be that process that I 10 the plasma pools fractionated at BPL from 400 litres to 600 litres. That is approximately 2,200 donations 11 was mentioning earlier, that once Factor VIII has been 11 12 fractionated from the supernatant, the pools are then 12 to 3,300 donations. 13 mixed to allow for Factor IX fractionation. 13 That increase may shed light on something that In the same month, March 1976, as we heard in 14 we discussed before. 14 the previous presentation, BPL made an application for 15 Sully, if we could have, please, INQY0000337, 15 16 page 39. 16 a product licence for Factor VIII from Elstree, and 17 that product licence said that the maximum pool size 17 Sir, is from Appendix 2 to the chronological 18 foreseen at Elstree is 450 litres. 2,500 donations 18 presentation to England and Wales, and it's this 19 are the figures that were given in the product licence 19 confusing point that we discussed before about why it 20 application. 20 is that, in the fourth column there, the capacity of 21 I note the word "foreseen" there, rather than 21 BPL, expressed in the amount of plasma that, in 22 22 the word being -- or words "being used" or "the theory, could be fractionated, is given as increasing 23 23 between 1977 and 1979, whereas the capacity, as present size". 24 The application also stated this, and I quote: 24 expressed in the amount of product that could be 25 "Because of the large number of control tests 25 provided, expressed in terms of international units, 155 156

for this product. We do not expect to reach this rate before mid-May, and capability beyond that date would be dependent on plasma supply, completion of clinical acceptance trials, clinical demand et seq."

So that is from March 1973.

There are also documents set out at paragraph 14

of the written presentation that indicate that pool sizes at PFC also increased because of a sense that it was advantageous, in terms of yield and reduction of loss, to fractionate in a larger pool size. I won't take you to that document but it is, as I say, set out at paragraph 14.

As demand rose for factor concentrates going into the 1980s, there was an exploration by Dr Foster and others of ways of increasing supply from the PFC. In a memorandum dated 29 December 1980, again I won't take you to it but it is at paragraph 15 on the written presentation, Dr Foster explored the limiting factors on production at PFC at that time. He concluded that the key limiting factor, both on the pool size and the frequency of processing, was the freeze drying capability at PFC.

Two freeze dryers were available for use. One was limited to freeze drying plasma pool of 300 kilograms, the other was limited to freeze drying

SBTS0000238_009. This is a review report from April 1984 from Dr Foster and Ida Dickson of PFC, looking at a Factor VIII recovery at PFC from April 1980 to September 1983. So it is not a report about pool sizes but it does touch upon pool sizes. If we go to page 8, please.

This is a table that was compiled as part of that report which refers to Factor VIII batches that were still in process, and, question mark, pending rework. what I take that to mean is that these are batches that have not been dispatched from PFC for various reasons.

You can see the reason for holding in the right-hand column.

What this helpfully shows is the size of the plasma pool for each of these batches. We can see in the top row a batch from 1978 to 1979 had a plasma pool of 114 litres. Three batches are there from 1979 to 1980. They are stated to be 167 litres, 175 litres and 300 litres. 1981 to 1982, we can see a number of batches. There are three that are 255, 260 -- sorry, two that are 260 and 290 litres. One is expressed as 255 vials, and we're not quite sure if a vial equates to a litre. But you have two at 290 and 260 litres, and then the other three are 450, 479 and 535 litres.

a plasma pool of 500 kilograms.

In that memorandum, Dr Foster suggests that one way of increasing production would be to increase the plasma pools by using smaller vials, which means that you could fit more into the larger freezer, and that would allow for a pool size of 700 kilograms.

The significance of this is borne out by Dr Perry's written statement to this Inquiry, in which he said, and I quote, that PFC pool sizes:

"... were designed and established to be aligned with anticipated process yields and the maximum capacity of freeze dryers used for the final stage of processing. At the time in question, PFC had two production scale freeze dryers of different capacities for this purpose."

That is paragraph 16 of the written presentation, Dr Perry and Dr Foster are both coming to give evidence, so I won't go into this any further, save to say that the data that we are about to look at seems to bear out the fact that pool sizes at PFC in the early 1980s were conditioned to an extent by the fact that the plasma from one pool had to fit into one dryer or the other.

Now, we have some data about the pool sizes at PFC at this time. If we could go, please, to

So it would appear that you have those two freezers, one of which can cope with up to about 290 litres, possibly up to 300 litres, of plasma, the other of which can cope with up to, on these figures, 535 litres.

It is a similar story for 1982 to 1983, that you have a split between seven batches, three are just under 300 litres, and four are between 495 and 555 litres.

If we could just go over the page as well, please, Sully.

We have another table setting out further batches that failed quality assurance tests, and we can see the size of those batches. And, again, similar story, from 1980 to 1981 and 1981 to 1982, where you have some batches which hover between 250 and 300 litres, and other batches which are about 500 -- in this case 540 and 555 litres for 1983 to 1984.

That information correlates with other sources that the Inquiry has. These are set out at paragraph 19 of the written presentation. I don't think there's a need to go to the underlying documents. But we can see at paragraph 19 that in a letter from November 1990, Professor Cash said that

it draws together that information that we have just gone through. It is important to state that the table is comprised of limited data points, and it is possible there are other data points and other pool sizes that were used at the time, particularly in the early 1970s.

We have used in the final column the same measure of donations per litre, so 5.5 donations per litre, as we have used for England and Wales, although Dr Perry in his statement estimated that there were about 4 or 5 donations per litre, saying there is a degree of reasonable difference, depending on which translation one takes.

169

and which you've heard evidence about before, the 16 people who were infected with HIV through the use of PFC products.

Dr Perry, in the third paragraph down, refers to the fact that all of the donors who contributed to this pool of Factor VIII had been identified or had sought to be identified, and he states that there were 4,000 such donors. So it appears that Dr Perry's conclusion is that the suspected pool was made up of 4,000 donors or donations. It is not entirely clear which metric is being referred to, but perhaps in this instance it doesn't matter.

That is a little higher than the figures that we have looked at in the table which took us up to 1983 and 1984.

You have heard from Mr Boukraa the steps that were taken in response to HIV and AIDS. They notably did not include steps to restrict the donor pool size at that time. There is a reference at paragraph 23 to a memorandum sent from Professor Cash to Dr Perry on 7 December 1984, in which he gave his view that any moves to restricting donor pools should be discussed by all directors. He said, and I quote:

"It is an exciting option that I suspect will have colossal cost and operational implications.

171

But looking at that, we can see that from the data, the estimated donations for a pool size of 114 litres in 1978 to 1989, is 627. That is just one data point that we have from that year.

1979 to 1980, we have a range of between 167 to 300 litres. That's a range of donors from about 900 to about 1.650.

1980 to '81, the pool size in litres is 144 to 290 litres; the range in donors, 792 to 1,595. That's 792 is a precise figure given but, of course, it is an approximation.

1981 to 1982, the plasma pool size in litres ranges from 260 to 540 litres. The estimated donations, 1,430 to 2,970.

1982-83, 283 litres to 555 litres, or 1,557 donors to 3,053 donors. That figure of 3,053 donors is also used for the single data point for 1983 to

We have only limited data for pool sizes thereafter. One interesting point of data is --I think we could have this on screen, please, Sully, it's PRSE0000965. This is a memorandum from Dr Perry to all staff, subject line "AIDS", date 31 January 1985. So this is just after the discovery of the Edinburgh cohort that Mr Boukraa referred to

170

There is much to be done before we need consider this option."

The final piece of data that we have is an article from 1985 written by Dr Foster, and Alan Dickson of PFC. That recorded -- I needn't take you to it -- that at the time of writing, the pool sizes for continuous flooring ^wd were between 600 kilograms and 1,000 kilograms, adopting the 5.5 donations per kilogram conversion figure, that equates to 3.300 to 5.500 donations.

That is from 1985. The reference is at paragraph 24 of the written presentation.

There is a graph, sir, at page 12 of the written presentation. So that, Sully, is INQY0000346. I think perhaps we could try page 13.

Page 11? Found it in the end. If we could expand that, please, at the bottom. The same caveats apply to this graph as to the previous ones about the lines between the data points. There are two lines which show the lowest range and the highest range of the pool sizes at PFC. There is also a dotted line which shows the average pool size at PFC, but I'd suggest that perhaps isn't as useful because it does seem to be that the plasma pools are either one size or another depending on which of the freeze dryers was

172 (43) Pages 169 - 172

1	being used.	1	INDEX	
2	But we can see that both of the lines do show an	2	Presentation to the Inquiry on domestic	1
3	increase in the early '80s and then a further increase	3	production of blood products in Scotland	
4	between 1984 and 1985. But I stress that the start	4	and for Northern Ireland by MR BOUKRAA	
5	and the end dates are based on very limited data	5		
6	points and so obviously come with a degree of caution	6	Presentation to the Inquiry on the size of	118
7	as a result.	7	pools of plasma used in domestic production	
8	That is all I intend to say at this stage about	8	of blood products by MR HILL	
9	pool sizes at PFC as well and you will, of course, be	9		
10	hearing further evidence in the coming days from	10		
11	Dr Foster about production at PFC among other matters.	11		
12	That, sir, is all I have for you today.	12		
13	SIR BRIAN LANGSTAFF: Well, thank you very much indeed,	13		
14	Mr Hill.	14		
15	So tomorrow we have Dr Foster, don't we?	15		
16	MR HILL: Yes.	16		
17	SIR BRIAN LANGSTAFF: 10.00. 10.00 tomorrow.	17
