

HCV LOOKBACK : UPDATE

Attached is a paper from Dr Robinson showing the situation as at 1 March, and covering the whole of the UK.

Action

For information, and any comments or questions from members at the meeting. (There may for instance be questions about why some figures on the first page seem to have gone down since last time, even where definitions have not altered.)

UPDATE OF CURRENT STATUS
OF LOOK BACK

*Updated from
including the SWBTS
Data included at
the meeting 25/3/97*

	England	Scotland	Wales	N Ireland	UK Total

HCV Lookback - National database

Evidence of liver disease

- Information supplied to the database indicates that of the 581 positives 20 (3.4%) have evidence of symptomatic liver disease
- 3.3% of the positive recipients and 1.6% of the negative recipients also have positive markers for Hepatitis B
