

Tuesday, 30 March 2021

(10.00 am)

**SIR BRIAN LANGSTAFF:** Yes.

**MS RICHARDS:** Good morning, sir. Today and tomorrow we will be looking at the [Belfast] Haemophilia Centre. As with all presentations on haemophilia centres, this isn't intended to be the last word on the Belfast Haemophilia Centre. Rather, the intention is to explain and put into the public domain what contemporaneous documents that have been received and examined so far by the Inquiry explain or reveal or suggest about the facilities, policies and practices at the centre.

I'll also highlight at various stages aspects of what witness testimony has told the Inquiry. You, sir, will recall the very powerful oral evidence heard in Belfast from individuals who had been infected or whose family members had been infected.

**SIR BRIAN LANGSTAFF:** I do indeed, yes.

**MS RICHARDS:** In addition to that testimony, the Inquiry has of course received a number of other statements, again from those infected or from their families, all of which have been read and considered by the Inquiry before today and I'll refer to some of the themes that emerge from those statements.

1

and staffing and patient numbers and will then turn to look in more detail at the products that were used and the treatment policies gleaned from a number of different sources.

The Belfast centre was established by Professor Nelson in 1958. It was located, at that stage, within the hospital's Clinical Pathology Department. Soumik, if we go RHSC0000067\_002, please. This is a report from March 1988 called "A profile of the management of haemophilia in Northern Ireland". I'll come back to it at various stages. It's authored by Dr Mayne and it appears it was a document addressed to the health authorities in Northern Ireland exploring issues about funding of haemophilia care in Northern Ireland.

For present purposes, if we go to the second page, we can pick up some information about numbers in the 1950s. Top of the page there's a table. 1958, 44 patients with haemophilia A and one with haemophilia B. Dr Mayne tells us, in the sentence below the table:

"In the 1950s no true haemostatic treatment was available. Bleeding episodes were managed with infusions of fresh frozen plasma."

That's a snapshot of the numbers in 1958. The

3

In terms of clinical evidence, we have several witness statements from Dr Elizabeth Mayne who, as you know, sir, will not be giving oral evidence to the Inquiry but we have her written testimony, as well as a number of earlier reports that she produced in the course of the late 1980s or early 1990s and I'll be referring to those in some detail in the course of today and tomorrow.

We have a statement from Professor Bridges, a statement from Dr McNulty and a statement from Dr Anderson, and we are also seeking statements from other clinicians, and you, sir, will decide whether to hear any oral evidence from any of those clinicians once you've seen such further evidence, such further statements, as the Inquiry is able to obtain.

We will be hearing on Thursday from a more recent perspective from Dr Benson, the current Haemophilia Centre Director, and you will recall in relation to the Cardiff Haemophilia Centre we heard from Professor Peter Collins, who was in a similar position. Obviously, he cannot deal with the events of earlier decades and we won't be asking him to do so.

So that's by way of introduction. I'm going to start with an overview of the centre, its facilities

2

available documentary and witness statement evidence suggests that that remained the number of patients known to the centre during the course of the 1960s.

There was no -- there were no dedicated staff or in-patient facility for haemophilia care during that period and no specific physical location for the centre, according to the documents that we have.

That's in terms of adult haemophilia care. In terms of paediatric care, children with bleeding disorders were cared for at the children's hospital, and Professor Bridges, who was the paediatrician in charge there until around 1979, has estimated in his statement that there were approximately ten child patients with bleeding disorders prior to 1979.

We can take that document down, thank you, Soumik.

We know from the various documents and statements that we have that the numbers of patients grew during the 1970s and 1980s and the staff team also grew so that from around the 1983 there was a part-time physiotherapist, a nurse, a secretary and some social work input and I'll look in a few moments at a document which has more detail of staffing in the 80s.

The haemophilia centre in Belfast was not

4

1 a reference centre for a number of years, and if we go  
2 to HCDO0000405, please, you'll see these are the  
3 minutes of a meeting of Haemophilia Reference Centre  
4 Directors, 26 February 1980, and if we go to page 6,  
5 under the heading "Haemophilia Reference Centres in  
6 Scotland and Northern Ireland", we will see the  
7 question of the status of the centre being raised:

8 "Professor Blackburn said that patients had  
9 raised with him the question of Haemophilia Reference  
10 Centres in Scotland and Northern Ireland. There were  
11 at present no official Reference Centres in either  
12 Scotland or Northern Ireland and some patients were  
13 very worried about this."

14 Then there's reference to a DHSS leaflet in the  
15 70s from Professor Bloom and reference to what was  
16 said to have been agreed in relation to Scotland.  
17 Picking it up a few lines down, we then come to  
18 Northern Ireland:

19 "Northern Ireland was included in the Oxford  
20 supra-region and Belfast was the only Haemophilia  
21 Centre in Northern Ireland. After some discussion, it  
22 was suggested that Belfast should be regarded as the  
23 Reference Centre for Northern Ireland and that  
24 Dr Rizza should write to Dr Mayne asking if she would  
25 approve of this idea and if she would like to attend

5

1 a centre in Dublin which enabled some patients from  
2 the Republic of Ireland to attend Belfast for  
3 treatment if that was more convenient and Belfast  
4 patients to receive treatment in southern centres when  
5 in the Republic.

6 We can see that if we go to HSOC0022947.  
7 You'll see this is a copy of The Haemophilia Society's  
8 Bulletin. There's a publication for 1989.

9 Soumik, if we go to page 9, and if we look at  
10 the heading, "The centre", so it's the second one,  
11 that's it, the first paragraph:

12 "The Northern Ireland Haemophilia Centre serves  
13 a population of 1.5 million. Its patients are drawn  
14 from all over the province and a reciprocal  
15 arrangement is operated between the Centres in Belfast  
16 and Dublin. This enables a small number of families  
17 from the Irish Republic to attend Belfast for  
18 convenience of travel, otherwise they would need to  
19 make a long and tedious journey to Dublin. In return,  
20 patients from the Northern Ireland Centre who go on  
21 holiday in the Republic of Ireland are treated free of  
22 charge at appropriate southern Centres."

23 We can see a question that arose about how that  
24 should be dealt with in financial terms from  
25 an exchange of correspondence between Dr Mayne and

7

1 future Reference Centre Directors Meetings. This was  
2 agreed. It was also agreed that the Department of  
3 Health should be asked to put Edinburgh and Glasgow as  
4 the Scottish Reference Centres and Belfast as the  
5 Northern Ireland Reference Centre, in the list of UK  
6 Haemophilia Centres when this was reprinted."

7 We can take that down. So we can see the  
8 agreement there that Belfast should become a reference  
9 centre. One of the significant consequences of that  
10 was that from the point at which it was recognised as  
11 a reference centre, Dr Mayne was, as it were, eligible  
12 to attend the Reference Centre Directors meetings and  
13 would thus be privy to the information that was  
14 discussed and disseminated at those meetings from the  
15 early 1980s onwards.

16 We don't need to go to the document but the  
17 minutes of a UKHCDO meeting from September 1981 notes  
18 that a Dr Thornton in the Northern Ireland Office of  
19 the DHSS had written to Professor Bloom confirming  
20 that the centre at the Royal Victoria Hospital had  
21 been designated as a haemophilia reference centre.

22 As that document recorded, there was only one  
23 recognised haemophilia centre in Northern Ireland and  
24 it served patients drawn from all over Northern  
25 Ireland. There was a reciprocal arrangement with

6

1 Professor Temperley from Dublin.

2 Soumik, if we could go to BHCT0000623, please.  
3 We can see that in September 1984 Dr Mayne was writing  
4 to Professor Temperley about a particular patient. If  
5 we go down so we can see the text of the letter, and  
6 in the second paragraph -- it's a patient who had  
7 attended the centre in Belfast for treatment it would  
8 appear whilst on holiday in the north. In the second  
9 paragraph she says this:

10 "I enclose a total of the amount of factor VIII  
11 that he has received while in the North and I suppose  
12 the simplest method of payment would be for your  
13 Centre to send our Centre the same amount in kind  
14 rather than involve our respective finance officers."

15 So it would appear that Dr Mayne contemplated  
16 that concentrate from Dublin would be sent to Belfast  
17 as a payment in kind rather than some form of  
18 financial charging arrangement. Before we look --  
19 sorry, next paragraph she says:

20 "Perhaps when we next meet we might discuss  
21 this type of problem, as of course, it will arise from  
22 time to time."

23 If we just look at the last paragraph of that  
24 letter you will see reference to the "Blood Club" and  
25 she says:

8

1 "... I am sorry I will not be able to be at the  
2 Blood Club later this month, as I was already  
3 committed to a haemostasis meeting in London."  
4 This appears to have been some kind of  
5 a gathering for Northern Irish and Irish clinicians to  
6 discuss matters relevant to haematology. It may have  
7 overlapped with or fulfilled a similar function to  
8 that which we've described as -- that which we've  
9 heard described taking place under the auspices of  
10 Professor Savidge. It may be the same, it may be  
11 something different or it may be something that  
12 performance a similar function; we've not got any  
13 further information at present.  
14 Turning to the issue raised with  
15 Professor Temperley, we can see his reply at  
16 BHCT0000622. He says in his response of  
17 10 October 1984:  
18 "I think it would be rather silly to charge  
19 each other for treatment of [haemophilia] during short  
20 visits North or South of the border. This should in  
21 the ordinary course of events balance out. On the  
22 other hand, I agree when prolonged treatment is  
23 envisaged for a citizen of the Republic in Northern  
24 Ireland we should make suitable compensation as we  
25 discussed? Perhaps you might give the question

9

1 ward, Sister Mary McGuigan keeps a close eye on  
2 haemophilia inpatient problems. Both are members of  
3 the Haemophilia Nurses' Association, as are many other  
4 ward nurses, making a total of seven members at the  
5 present time."  
6 So that's nursing staff.  
7 In terms of physiotherapy staff, we learn in  
8 the next paragraph that in 1983 a part-time  
9 haemophilic physiotherapist was appointed initially,  
10 and for a further number of years she was funded by  
11 The Haemophilia Society.  
12 "Mrs Lynne Crockard has proven her worth time  
13 and time again."  
14 Then if we go to the next paragraph we find  
15 details of dental care, a dentist there identified who  
16 has provided consultant dental care and runs a primary  
17 care clinic devoted to the management of patients with  
18 bleeding disorders.  
19 There's then reference to the various  
20 laboratory staff, the Senior Chief MLSO, Mr Carville,  
21 who is said to have been in charge of blood product  
22 provision since the late 1960s, when cryoprecipitate  
23 was prepared locally in the department, and then  
24 Dr Mayne continues:  
25 "After the transfer of its manufacture to the

11

1 of short visits more thought."  
2 I won't go to Dr Milne's subsequent letter but  
3 she agrees there's no need to charge for short visits.  
4 Whether there transpired any exchanges of concentrate  
5 in kind, as it were, for longer visits, the  
6 documentation doesn't tell us one way or another.  
7 Soumik, can we go back to The Bulletin article,  
8 so HSOC22947 -- sorry, HSOC0022947, my apologies.  
9 If we go to page 8, we can pick up, in the same  
10 article, a little more information about the staffing  
11 arrangements. This is by the 1980s, late 1980s. We  
12 look at the heading "Staff", we can see this is the  
13 position by 1989:  
14 "The permanent medical staff of the Centre  
15 comprises three Consultant Haematologists: one the  
16 author [that's Dr Mayne], who has overall  
17 responsibility for province-wide haemophilic care,  
18 aided by the Professor of Haematology, Professor  
19 Bridges, and Dr Dempsey, who carries responsibility  
20 for all paediatric activity in the Centre. Sister  
21 Catherine Farrell is the Sister-in-Charge of the  
22 outpatient facilities; she is on the committee of the  
23 Haemophilia Nurses' Association and is the present  
24 membership secretary of that organisation. She is  
25 ably supported by Staff Nurse Colette McAfee. In the

10

1 Northern Ireland Blood Transfusion Service, he became  
2 in some respects what might be described as 'the  
3 keeper of the privy purse'. He has never allowed the  
4 stocks of blood products to run dry and he and his  
5 staff in the hospital Blood Bank are responsible for  
6 issuing all the material for home treatment.  
7 "They maintain computerised records of the same  
8 and indeed all treatment -- a job important and so  
9 necessary for the compilation of the annual returns  
10 for Oxford. No Haemophilia Centre can exist without  
11 accurate laboratory tests to establish the diagnosis  
12 and to maintain monitoring of the effectiveness of the  
13 treatment given and the Chief MLSO Terry Ingles, has  
14 been in charge of the Coagulation Laboratory for more  
15 than 12 years. More recently new additions to the  
16 staff have taken place."  
17 So we see reference in the next sentence to  
18 there being a permanent secretary for the haemophilia  
19 centre and a scientist.  
20 The next paragraph refers to the involvement of  
21 a professor of orthopaedic surgery. Then in the last  
22 paragraph, under the heading "Staff", Dr Mayne picks  
23 up on the question of social work, and says this:  
24 "In the past the Northern Ireland Haemophilia  
25 Centre was not overwhelmed by help or interest in

12

1 terms of input from social workers. Some came and  
 2 went, some showed interest and occasionally when  
 3 an excellent one was appointed, she had to leave,  
 4 having gained promotion. Others declared that the  
 5 problems of haemophilic patients were 'insoluble'.  
 6 However, the picture during the past year has changed  
 7 since the appointment of Miss Geraldine Kerr, the  
 8 social worker is now closely involved and is rapidly  
 9 making her mark in the Centre and amongst the  
 10 patients."

11 So that's the picture in terms of staffing  
 12 by 1989. Obviously at earlier stages far fewer staff  
 13 members.

14 If we could then turn to BHCT0000503, you will  
 15 see the date of the document at the bottom. It's  
 16 1 August 1985. That's actually the second page of the  
 17 document, so if we could go to the next page, which is  
 18 where it begins, this would appear to be a document  
 19 authored by Dr Mayne. Certainly in terms of its look  
 20 and style, it sounds like Dr Mayne. It's headed  
 21 "Northern Ireland Haemophilia Reference Centre  
 22 Factor VIII usage". I'll no doubt come back to it  
 23 when we look at blood product usage but for present  
 24 purposes this provides an update of information about  
 25 numbers of patients. The first sentence suggests that

13

1 come back to what it says about products in due  
 2 course.

3 We have various further figures in relation to  
 4 increases in patient numbers and we can pick that up  
 5 in terms of the modern picture and the picture over  
 6 recent years from the evidence of Dr Benson on  
 7 Thursday.

8 The article in The Bulletin, I won't go back to  
 9 it, but it also shows development of the physical  
 10 facilities such that by 1989 there was a day centre  
 11 and an in-patient unit with 16 designated beds, and  
 12 Dr Mayne's article suggests that at least a quarter of  
 13 those tended to be occupied by haemophilic patients  
 14 much of the time.

15 There is also reference in the documents to  
 16 a joint haemophilic and orthopaedic clinic being held  
 17 every three months by March of 1988, and we've seen  
 18 reference in that article to there being a regular  
 19 dental clinic.

20 Again, just sticking with an overview of the  
 21 facilities and services at the centre, if we go to  
 22 LOTH0000051\_089, we'll see a short document from  
 23 January 1992. It's confidential, to the Haemophilia  
 24 Centre Directors of Scotland and Northern Ireland, and  
 25 it's a report on clinical audit from 1991 and it sets

15

1 the centre became a designated reference centre  
 2 in 1976. As we've seen from UKHCDO minutes, that  
 3 would appear to be incorrect. But, in any event, in  
 4 the second paragraph we then see the number of people  
 5 registered in 1984/85 as suffering from inherited  
 6 bleeding disorders, 189 persons broken down as there  
 7 set out: so 124 with haemophilia A; 16, haemophilia B;  
 8 45, von Willebrand's disease; 2 with Factor X  
 9 deficiency; one with Factor XIII deficiency; and one  
 10 with Factor XI deficiency.

11 Then we see in the paragraph below that:

12 "Out of this number of patients, 63 are  
 13 residential and drawn from the Eastern Health Board  
 14 area. Some 25 of these originate from the North and  
 15 West Belfast District. The remaining patients are  
 16 equally divided between the other Health Boards -- 43  
 17 from the Northern Board, 43 from the Western Board and  
 18 40 under the aegis of the Southern Board."

19 She explains below that:

20 "In order to simplify the treatment of these  
 21 patients, all the blood products necessary for  
 22 treatment are held at the Reference Centre and issued  
 23 to other hospitals in the Province, specifically  
 24 designated for individual patients."

25 Then I'll leave that document now because I'll

14

1 out the results of clinical audit visits.

2 If we look at the list of centres, Belfast was  
 3 audited by Dr Ludlam, and that's centre 2, and if we  
 4 look at the recommendations made by the auditors in  
 5 the list below for centre 2, what Dr Ludlam apparently  
 6 picked up on his audit visit to Belfast in 1991 were  
 7 issues about privacy of bedside and telephone  
 8 conversations, and there's a suggestion of dedicated  
 9 rooms and staff and a need for more social work and  
 10 physiotherapy input.

11 If we look a little further down the page, the  
 12 last section of the document says:

13 "Replies were received from patient  
 14 questionnaires as follows ..."

15 So it would appear that the audit involved  
 16 a patient questionnaire process. And for centre 2 --  
 17 I don't know whether "n equals 5" suggests that the  
 18 number of replies received were 5 -- and it picks up  
 19 upon those replies having suggested that  
 20 HIV counselling --

21 **SIR BRIAN LANGSTAFF:** Not the number of replies, the  
 22 number of replies that dealt with the question.

23 **MS RICHARDS:** Ah, yes, you may be right.

24 "HIV counselling by juniors inadequate", is  
 25 what is picked up there.

16

1 **SIR BRIAN LANGSTAFF:** Just before you pass from that, it  
 2 is interesting that while Professor Ludlam was  
 3 auditing Belfast, Dr Mayne appears to have been  
 4 auditing Glasgow.  
 5 **MS RICHARDS:** Yes.  
 6 **SIR BRIAN LANGSTAFF:** The comments critical of Glasgow  
 7 appear to include that it needs counselling rooms,  
 8 which is very similar to the criticism which  
 9 Professor Ludlam is making of Belfast.  
 10 **MS RICHARDS:** Yes. Yes, you are right, sir.  
 11 **SIR BRIAN LANGSTAFF:** Which is interesting.  
 12 **MS RICHARDS:** If we go to a document authored by Dr Mayne  
 13 which sets out a reflection on the audit, it's at  
 14 WITN0736010. It's described as a "1991 report of  
 15 activity of the Northern Ireland Regional Centre for  
 16 hereditary hemorrhagic disorders", and if we go to  
 17 page 6, we can see under the heading "Haemophilia  
 18 Clinical Audit", Dr Mayne says this:  
 19 "The haemophilia Clinical Audit was completed  
 20 during the month of August 1991. It was carried out  
 21 by Dr Christopher Ludlam from the Regional Haemophilia  
 22 Centre attached to the Edinburgh Royal Infirmary. All  
 23 the facilities at the Centre in Belfast were examined  
 24 and a signed copy of his report is attached to this  
 25 document. He has indicated clearly the areas which he

17

1 always been a sad lack -- there was no facility for  
 2 a peripatetic social worker. It's saying because you  
 3 have got space to go to, places to go to, there's no  
 4 facility for someone who goes to places? I don't  
 5 understand the logic.  
 6 **MS RICHARDS:** I can't cast any further light on it, sir.  
 7 I see your point. That's what we have about it.  
 8 **SIR BRIAN LANGSTAFF:** Yes.  
 9 **MS RICHARDS:** It appears that there was an ongoing lack of  
 10 such provision and, indeed, of the other facilities  
 11 identified in the audit and referred to here by  
 12 Dr Mayne.  
 13 **SIR BRIAN LANGSTAFF:** I mean, I would have thought the  
 14 reasoning won't be a question of distance from centre  
 15 to home but a question of funding.  
 16 **MS RICHARDS:** Yes. Yes or possibly difficulties of  
 17 recruitment. I don't know.  
 18 **SIR BRIAN LANGSTAFF:** Maybe. I suppose if people are  
 19 spending their time travelling rather than actually  
 20 working, there may be questions asked by finance.  
 21 That may have been the reason for it but, still,  
 22 that's what we see.  
 23 **MS RICHARDS:** It is. We know that by this time -- sorry,  
 24 it's the same document. Let me just get the page.  
 25 Yes, if we go to the first page, just to get

19

1 regarded to be significantly deficient. The most  
 2 important lack of facility is an area where the  
 3 patients can be seen in privacy and confidentiality.  
 4 This is particularly relevant to those patients who  
 5 are HIV positive. The second deficiency was the lack  
 6 of a dedicated Social Worker to all the Haemophilics  
 7 in the Province. Due to the widespread distribution  
 8 of patients and families within the region of Northern  
 9 Ireland, it has always been a sad lack that there was  
 10 no facility for a peripatetic Social Worker who could  
 11 carry out the appropriate home visits. It is hoped  
 12 that this will be rectified within the near future."

13 It's a report dated, if we just go a little  
 14 further down that page, 9 July 1992.

15 So although the article in The Bulletin in 1989  
 16 had expressed a degree of optimism about the provision  
 17 of social work, by that stage at least it would appear  
 18 that the position had not been satisfactorily  
 19 addressed by 1992.

20 **SIR BRIAN LANGSTAFF:** I don't quite understand the  
 21 reasoning there. It is obviously true of  
 22 Northern Ireland that there will be a widespread  
 23 distribution of patients and families if you have one  
 24 treatment centre covering the whole of Northern  
 25 Ireland, but because of that, it's said, there's

18

1 an update of numbers, we can see it says the -- this  
 2 is the third line:

3 "The categories of patients which were seen are  
 4 as follows ..."

5 So this is not patients simply registered but  
 6 patients seen. Then it says "(Registered numbers  
 7 shown in brackets)", but there aren't brackets, so I'm  
 8 not quite sure what that refers to. But in any event:  
 9 haemophilia A, 147; haemophilia B, 14;  
 10 von Willebrand's disease, 61; symptomatic carriers of  
 11 haemophilia A, 7; and then inherited platelet  
 12 disorders, 24; and then reference to further clotting  
 13 disorders and blood disorders as set out there.

14 Sir, I think that probably is the number of  
 15 registered patients.

16 **SIR BRIAN LANGSTAFF:** If so, it's gone up by about 100  
 17 from 1985.

18 **MS RICHARDS:** No, from an earlier period I think the  
 19 figure -- oh, no, you might be right, sir. Yes, there  
 20 were 189 in total --

21 **SIR BRIAN LANGSTAFF:** That was --

22 **MS RICHARDS:** -- in 1985.

23 **SIR BRIAN LANGSTAFF:** And this is '92. So seven years.

24 **MS RICHARDS:** Yes.

25 In the early 2000s, 2001/2002, haematology

20

1 services at the Royal Victoria Hospital were  
2 amalgamated with the City Hospital and the centre  
3 moved from the Royal Victoria Hospital to the Belfast  
4 City Hospital. The arrangements for the move and  
5 a comparison between the available facilities is set  
6 out in some detail in the statement of Dr Julia  
7 Anderson, and Dr Benson may also be able to provide  
8 some information about the current arrangements in his  
9 evidence on Thursday.

10 That's adult care. In terms of when children  
11 transferred from paediatric care to adult care, if we  
12 look at Dr Mayne's evidence, it's WITN0736006. This  
13 is a statement of hers from February 2020. If we go  
14 to page 5, paragraph 22, and we look at the last  
15 sentence, she says:

16 "... the transfer age to adult care at the  
17 Royal Victoria Hospital was 13 years of age ..."

18 Professor Bridges' statement is at WITN4569001,  
19 and if we go to the third page, he gives an age of  
20 around 14 but says there were no hard and fast rules.  
21 So he says:

22 "At the Children's Hospital [so that's the  
23 Royal Belfast Hospital for Sick Children], I was  
24 responsible for the care of patients with haemophilia  
25 and related disorders as well as children with

21

1 Royal Victoria Hospital from 1968 to 1972. She  
2 completed her MRCPATH in 1970, became a consultant  
3 haematologist in 1972, and she remained at the Royal  
4 Victoria Hospital Belfast throughout her career until  
5 she retired in 1999.

6 She was the director of the centre, taking over  
7 from Professor Nelson, from 1978 until her retirement  
8 in 1999. Dr Mayne was also a member of a number of  
9 different committees and organisations. She was chair  
10 of UKHCDO in the early 1990s. She was a trustee of  
11 the Macfarlane Trust and the Eileen Trust for a period  
12 of time in the 1990s. She was at some stage  
13 vice president of the World Federation of Haemophilia  
14 and I think also in the early 1990s she participated  
15 on the Committee on Safety of Medicines.

16 We have six witness statements from Dr Mayne.  
17 Five are statements responding to a range of  
18 individual witness statements from patients or former  
19 patients and their families. Her sixth and most  
20 recent statement is a long statement in response to  
21 the broader general questions posed of her by the  
22 Inquiry. We also have, as you have seen already, some  
23 various miscellaneous documents authored by her and  
24 then a lengthier expert report that she produced in  
25 1990 for the HIV litigation, presumably at the request

23

1 leukaemia and other blood disorders. Children with  
2 haemophilia would have been looked after in the  
3 Children's Hospital up to the age of around 14 before  
4 transferring to the adult hospital (Royal Victoria  
5 Hospital), although there were no hard or fast rules  
6 and no formal process for transferring to the adult  
7 haemophilia service."

8 He does indicate -- and I'll come back to this  
9 part of the statement in a little while. He does  
10 indicate that there might have been children who were  
11 transferred at a younger age to the care of Dr Mayne  
12 if he thought that they might need to be treated with  
13 factor concentrates because he used only  
14 cryoprecipitate and anyone who needed treatment with  
15 factor concentrates would be dealt with by Dr Mayne.  
16 Again, Dr Benson will be able to tell us what the  
17 current position is in terms of the transition from  
18 paediatric to adult services.

19 We can take that down, thank you.

20 Just dealing a little more with the various  
21 doctor names that we see crop up from time to time in  
22 the material, or in the case of Dr Mayne we see crop  
23 up frequently in the material.

24 Dr Elizabeth Mayne trained in Belfast. She  
25 worked as a senior registrar in haematology at the

22

1 of the Department of Health.

2 In terms of other clinicians, I've made  
3 reference already to Professor Bridges. He was  
4 a consultant clinical pathologist at the Royal group  
5 of hospitals in Belfast and based at the Royal Belfast  
6 Hospital for Sick Children and, as we've seen,  
7 responsible for paediatric care for those patients  
8 with bleeding disorders who were children until 1979.

9 In 1979 he was appointed chair of haematology  
10 at Queen's University Belfast, and his statement  
11 indicates he spent 50 per cent of his time thereafter  
12 in clinical practice, and worked at the adult hospital  
13 primarily in leukemia and general blood disorders and  
14 his only involvement with adult haemophilia care, he  
15 says, thereafter was to provide cover for Dr Mayne.

16 His role at the Children's Hospital was taken  
17 on by Dr Dempsey, and Professor Bridges then retired  
18 in 1994.

19 There's also Dr El-Agnaf, who worked as  
20 a registrar in haematology at the Royal Victoria  
21 Hospital for a period of a little -- just under  
22 a year, August '82 to July '83, and then worked at the  
23 City Hospital. He worked in the Blood Transfusion  
24 Service for a period of time and then again at the  
25 Royal Victoria Hospital, and in January 1988 became an

24

1 acting consultant haematologist at the Belfast City  
2 Hospital. Again, however, his role appears to have  
3 been predominantly in relation to more general  
4 haematology.

5 Dr McNulty worked in the haemophilia centre  
6 from 1992. She was a staff grade doctor from 2000 and  
7 an associate specialist from 2008.

8 Dr Frank Jones was the acting director of the  
9 haemophilia centre upon Dr Mayne's retirement, and he  
10 was acting director from 1999 to 2001. In 2001 or  
11 thereabouts Dr Julia Anderson became full-time  
12 haemophilia consultant and director at the centre.  
13 She was there until around 2005, and then Dr Jones  
14 seems to have taken up the mantle of acting director  
15 again until Dr Benson's employment.

16 There was also a brief interlude in which there  
17 was a Dr O'Keeffe as consultant in 2006.

18 I'm going to turn now, having given that  
19 overview of the centre facilities and staffing, to the  
20 use of blood products. We've seen a passing reference  
21 to the position in the 50s, treatment with fresh  
22 frozen plasma. Prior to the advent of factor  
23 concentrates, it's clear that the product of choice  
24 was cryoprecipitate. I want to look at what both  
25 Professor Bridges and Dr Mayne say about

25

1 Dr Mayne."

2 If we go over the page, if we look at the very  
3 bottom of the page you'll see a heading "Selection,  
4 purchase and use of blood products (in particular  
5 factor concentrates)" and, we go to the top of the  
6 next page, he says at the top of that page:

7 "When I was at the Children's Hospital,  
8 concentrates were not used. We used cryoprecipitate  
9 which, to the best of my knowledge, was supplied by  
10 the Northern Ireland Blood Transfusion Service."

11 Then he refers to the position at the Royal  
12 Victoria Hospital where he spent some of his time  
13 after 1979 but essentially says he was not involved in  
14 decision-making about what products to use, either  
15 generally or in relation to individual patients.

16 If we go to the next page, we can see at the  
17 top of the page he says:

18 "When I was at the Children's Hospital  
19 concentrates were not available. We used  
20 cryoprecipitate -- there was nothing else so the  
21 question of advantages or disadvantages did not  
22 arise."

23 Then he comments:

24 "Although I did not use concentrates, I know  
25 they were much more effective. They were also much

27

1 cryoprecipitate.

2 So we'll start with Dr Bridges and go back to  
3 his statement at WITN4569001. If we go to page 5 --  
4 sorry, page 3, my apologies. So under the heading  
5 "Roles and responsibilities at the Children's  
6 Hospital", we have looked at the first paragraph  
7 already in terms of age of transfer. In the second  
8 paragraph he says this:

9 "During my time at the Children's Hospital, the  
10 main treatment for children with haemophilia was  
11 cryoprecipitate. There was no register of patients as  
12 far as I can remember. I do not recall having any  
13 child patients who would have been under the ages of  
14 5-7 approximately although I cannot be certain.  
15 Cryoprecipitate became available around the mid-1960s.  
16 This was a major development in the treatment of  
17 haemophilia. Prior to the introduction of  
18 cryoprecipitate, treatment would have been limited to  
19 measures such as bed rest and pain relief and so on."

20 Then in the next paragraph he says:

21 "Because my clinical experience of treating  
22 haemophilia patients involved mainly treatment with  
23 cryoprecipitate, a child who I considered might  
24 require treatment with factor concentrates, would have  
25 been referred to the adult hospital to be seen by

26

1 more convenient, especially for Home Treatment.

2 Cryoprecipitate had to be frozen. You needed space to  
3 store it and so on. Back then people did not have  
4 freezers that could accommodate it. Another  
5 disadvantage of cryoprecipitate was it could not be  
6 used for surgery because you would not have had the  
7 level of cover needed."

8 In fact, there's evidence it was used for  
9 surgery and did provide an effective level of cover,  
10 but that may not have been the case, obviously, for  
11 paediatric patients.

12 He again confirms in the paragraph below he  
13 wasn't involved in deciding on the use of concentrates  
14 as opposed to cryoprecipitate or in formulating policy  
15 regarding home treatment.

16 So that tells us comparatively little other  
17 than cryoprecipitate was the product of choice at the  
18 Children's Hospital throughout the 1970s.

19 In terms of Dr Mayne's perspective on  
20 cryoprecipitate, if we go first to RHSC0000067\_002.  
21 We looked at this a few minutes ago. This is her  
22 March 1988 report. I want to pick up, first of all,  
23 what she says in the first paragraph. She refers in  
24 the second line to the Birch paper about life  
25 expectancy of a severe haemophiliac in the 1930s and

28

1 then says this:  
 2 "New treatment in the late 1960s [which can  
 3 only have been cryoprecipitate not concentrates] and  
 4 the innovation of a Home Care Programme in the  
 5 early 1970s ..."  
 6 Pausing there, the evidence in relation to  
 7 Belfast is that home treatment was introduced either  
 8 in 1974 or 1976 but certainly the mid rather than  
 9 early 70s:  
 10 "... increased the life expectancy to 71 years  
 11 in 1977."  
 12 She doesn't say where she gets that figure from  
 13 but if that's the life expectancy by 1977, logically  
 14 it would seem that must in large measure at least be  
 15 due either to cryoprecipitate and not solely  
 16 attributable to factor concentrates because the  
 17 evidence suggests that cryoprecipitate remained in  
 18 active use for much of the 1970s.  
 19 If we then go over the page, pick it up under  
 20 the heading "Treatment", Dr Mayne says this:  
 21 "In 1967 a milestone occurred; a revolutionary  
 22 concentrate was produced called 'cryoprecipitate'. It  
 23 was prepared from single plasma donation according to  
 24 the methodology discovered by Poole, 1965. It was  
 25 prepared initially in the Haematology Laboratory,

29

1 "Within ten years from commencement, all  
 2 patients with adequate vein access and who had passed  
 3 successfully the 3-month teaching programme, were  
 4 placed on home treatment. The benefits accrued from  
 5 this were as follows ..."  
 6 Then she sets them out, in particular hospital  
 7 admissions becoming a rarity and improved ability to  
 8 attend school regularly and maintain further  
 9 education.  
 10 **SIR BRIAN LANGSTAFF:** So when it says "within ten years  
 11 from commencement", it means by about 1984?  
 12 **MS RICHARDS:** Yes, I think that's what this document is  
 13 suggesting, yes.  
 14 That's her March 1988 report produced I think,  
 15 as I say for the purposes of trying to secure further  
 16 funding.  
 17 If we then go to CBLA0000072\_024, this is  
 18 Dr Mayne's expert witness report regarding  
 19 HIV litigation dated May 1990. If we turn to page 6,  
 20 we can pick up, about four lines down, Dr Mayne's  
 21 observations on cryoprecipitate. She says this:  
 22 "Earlier, in 1954, Professor Gwyn MacFarlane  
 23 had defined the goal of treatment of a Haemophiliac  
 24 with Factor VIII as 'continuation replacement as in  
 25 the treatment of diabetics with insulin'. Factor VIII

31

1 Royal Victoria Hospital. Then the process was scaled  
 2 up and taken over by the Blood Transfusion Service.  
 3 No donor screening programme existed for the detection  
 4 of viral hepatitis and many recipients developed  
 5 clinical or subclinical hepatitis B. Nonetheless, the  
 6 patients were ecstatic about the new treatment.  
 7 A simple dental extraction was normalised and no  
 8 longer constituted a major ordeal necessitating many  
 9 weeks in hospital."  
 10 Then if we go to the next page, she says:  
 11 "During 1971 cryoprecipitate was replaced  
 12 gradually by commercially produced  
 13 freeze-dried/lyophilised factor VIII."  
 14 We'll look at the returns which show in fact  
 15 some continuing usage for cryoprecipitate:  
 16 "It had a higher purity and a predictable  
 17 potency. It became the routine treatment for severely  
 18 affected patients, cryoprecipitate being reserved for  
 19 mildly affected patients and those suffering from  
 20 von Willebrand's disease. Thereafter, from 1974 [so  
 21 that's the date given here for the commencement of  
 22 home treatment], the patients were encouraged to learn  
 23 to treat themselves. This was to reduce or eliminate  
 24 the endless hospital admissions ..."  
 25 Then if we go down a couple of lines she says:

30

1 availability as cryoprecipitate transformed  
 2 Haemophilia treatment. It did not achieve  
 3 MacFarlane's goal but the crippling childhood  
 4 deformities, the pain, the constant fear of death from  
 5 trivial injury and the further fear of bleeding  
 6 following dental extractions or emergency surgery  
 7 receded.  
 8 "Cryoprecipitate was and is prepared by the  
 9 simple methodology of rapidly freezing donor plasma,  
 10 followed by slow thawing. Its Factor VIII content is  
 11 variable as donor plasma levels have a wide range of  
 12 normal within the population ..."  
 13 She sets out the range and sets out what, on  
 14 average, a single donation of plasma will produce, on  
 15 average between 70 and 100 units of Factor VIII.  
 16 If we just go down a few lines so we can see  
 17 the rest of the page, picking it up with the sentence:  
 18 "In time, experience using cryoprecipitate  
 19 established that many donations were needed for the  
 20 treatment of severely affected adult patients. The  
 21 quantity required led to infusions, large in volume  
 22 and high in protein content."  
 23 Then if we go -- oh, she says at bottom of the  
 24 page, it also contains the Factor VIII requirements  
 25 for treating the bleeding of von Willebrand's

32

1 syndrome. Go to the top of the next page. She then  
 2 sets out reactions to treatment:  
 3 "Reactions to treatment occurred, probably  
 4 related to the extraneous protein present. The  
 5 adverse reactions included the development of skin  
 6 rashes, minor chills, fevers and, on occasions, more  
 7 severe anaphylactoid responses occurred associated  
 8 with difficulty in breathing and a lowering of the  
 9 blood pressure. Reactions also occurred when small  
 10 volumes were infused but in general the mildly  
 11 affected, the children and patients with the  
 12 von Willebrand syndrome were treated with less  
 13 complication. A major disadvantage was the  
 14 unpredictability of infused dosage. Efficacy was  
 15 assessed clinically and retrospectively in regard to  
 16 achievement of Factor VIII level in the patient.  
 17 Maintenance of the sterility of each donor pack  
 18 precluded estimates prior to infusion. A further  
 19 disadvantage was the necessity of storage of the  
 20 product within a deep freeze unit."  
 21 So those are what are said to be disadvantages  
 22 of cryoprecipitate:  
 23 "Advantages were efficacy, low donor exposure  
 24 [safety] and simplicity of manufacture."  
 25 There are pieces of correspondence, we've

33

1 preparation of cryoprecipitate was transferred to the  
 2 Transfusion Service, but elsewhere in her statements  
 3 and documents, Dr Mayne makes plain there was never  
 4 a difficulty in terms of obtaining sufficient  
 5 quantities of cryoprecipitate from the Transfusion  
 6 Service.  
 7 Then if we go to page 11, I think, we can see  
 8 at paragraph 10.1 she essentially confirms  
 9 Professor Bridges' evidence. She says:  
 10 "In the 1970s apart from myself no other  
 11 individual was concerned with the selection and  
 12 purchase of Factor Concentrate. Cryoprecipitate  
 13 remained the treatment of choice for children. The  
 14 then Paediatric Haematologist [so no doubt Professor  
 15 Bridges], rightly, declined involvement in discussing  
 16 the selection of products for adults."  
 17 Then if we go to page 15 -- we'll obviously  
 18 come back to what she says about factor  
 19 concentrates -- she talks about cryoprecipitate  
 20 further in her statement as follows. She says this:  
 21 "When planning for home treatment with  
 22 concentrates, I was anxious and apprehensive about  
 23 repeatedly injecting patients with any material,  
 24 particularly over periods of weeks and months via the  
 25 intravenous route. Therefore, I decided that all

35

1 referred to them in our note on the centre -- I'm not  
 2 going to go to them now but the references are in  
 3 paragraph 30 of the note -- which show cryoprecipitate  
 4 being used in individual cases in the course of 1974.  
 5 If we then look at Dr Mayne's witness statement  
 6 and we go to WITN0736009, this is her most recent  
 7 statement, 4 February 2021.  
 8 If we go to page 6, first of all, Soumik.  
 9 I'm just going to pick up references to  
 10 cryoprecipitate here, so paragraph 5.3, second  
 11 paragraph on the page:  
 12 "The late 1960s was a special time for  
 13 Haemophilia. Cryoprecipitate, the first really  
 14 effective treatment had been discovered by Pool and  
 15 Shannon in 1965.  
 16 "My fellow registrar, Dr Brian Otridge,  
 17 initially, was responsible for preparing 'in house'  
 18 cryo within the hospital Blood Bank. He took up  
 19 a consultant post in Dublin in 1968. I took over his  
 20 mantle until the preparation of cryo was transferred  
 21 to the Northern Ireland Blood Transfusion Service ...  
 22 for production on a larger scale."  
 23 So cryoprecipitate initially produced in-house  
 24 before being taken over by the Transfusion Service.  
 25 We don't, I think, have a date for when the

34

1 children should remain on treatment with  
 2 cryoprecipitate. This was early in the 1970s and  
 3 Dr John Bridges, the paediatric haematologist, was  
 4 happy with the decision. Later in 1982 his newly  
 5 appointed successor, Dr ... Dempsey, was even more  
 6 enthusiastic about using cryo in this way than myself.  
 7 However, we agreed an exception should be made in  
 8 respect of a very limited category of patient."  
 9 So this is still dealing with children. In the  
 10 next paragraph she says this:  
 11 "In addition to the two severely affected  
 12 paediatric patients already on home treatment, it was  
 13 decided that patients with brain injuries or those who  
 14 required major surgery should have definitive amounts  
 15 of Factor VIII concentrate to guarantee the  
 16 achievement of 100 per cent VIII C levels.  
 17 Fortunately, the situation never arose and  
 18 concentrates were never used in those circumstances  
 19 during my time."  
 20 So as is apparent from elsewhere in her  
 21 statements, there were two child patients on home  
 22 treatment with factor concentrates. The remainder of  
 23 children, because no other exceptional circumstances  
 24 arise, remained on cryoprecipitate.  
 25 Under the heading below, "Why cryoprecipitate

36

1 for Children?" she says this:  
 2 "Due to their diminutive size, children did not  
 3 require large doses of cryoprecipitate to be  
 4 effective. This reduced the likelihood of allergic  
 5 reactions which were common in adult patients who did  
 6 require larger doses. There are a number of problems  
 7 associated with using cryoprecipitate in large doses."

8 Then she sets out her perception of  
 9 disadvantages of cryoprecipitate:

10 "Firstly, the inability to make reliable dose  
 11 calculations. This was a very significant problem.  
 12 Factor VIII C clotting activity has a wide  
 13 physiological variation. It can increase (along with  
 14 other clotting factors) four-fold during the third  
 15 trimester of pregnancy. Likewise, it is raised taking  
 16 the oral contraceptive pill. It is also increased at  
 17 ovulation, the point mid-cycle of the menstrual  
 18 period. This is probably designed, physiologically,  
 19 to aid ovulation. Thereafter the level falls again  
 20 prior to the onset of menstrual bleeding. Exercise,  
 21 particularly circuit running, is also associated with  
 22 doubling or trebling the Factor VIII clotting activity  
 23 on a temporary basis. It is likely due to increased  
 24 blood flow through the spleen ... Thus there is wide  
 25 variation in the VIII C activity from batch to batch

1 Then her fifth identified disadvantage is:  
 2 "... like all untreated blood products it  
 3 carries the risk of viral infection."

4 I should say that the question that was posed  
 5 to her was a question to identify the advantages and  
 6 disadvantages of alternative treatment. She set out  
 7 there, in relation to cryoprecipitate, disadvantages,  
 8 but not added anything in relation to what might be  
 9 thought to have been some of the advantages of  
 10 cryoprecipitate.

11 So that's Professor Bridges and Dr Mayne on the  
 12 use of cryoprecipitate.

13 I turn next then to the evidence about the use  
 14 of factor concentrates. If we go to BHCT0000784, this  
 15 is a document about an individual case. It's dated  
 16 12 February 1970. If we go down, we can see it's from  
 17 Dr Mayne to a Dr Wallace, and picking it up in the  
 18 second line, it says:

19 "In view of the importance of this knee joint  
 20 to [the patient's] everyday life and well being, and  
 21 in consideration of the fact that he had received no  
 22 cryoprecipitate for at least one year, we decided to  
 23 treat him with Factor VIII concentrate on this  
 24 occasion."

25 I raise that because it's the first documented

1 of cryoprecipitate, dependent on the status of the  
 2 donor."  
 3 So that's Dr Mayne's explanation about the  
 4 reasons why there might be variations in the amount of  
 5 Factor VIII activity in individual batches of  
 6 cryoprecipitate.

7 Her second identified disadvantage is a purity  
 8 issue, there's a purity issue due to the presence of  
 9 incidental material, and she explains that during the  
 10 time she was involved in the preparation of cryo,  
 11 technicians noticing packs which had an odd colour and  
 12 suggests that those might be changes due to the oral  
 13 contraceptive pill or donors using self-tanning sprays  
 14 and lotions.

15 She then says:  
 16 "Thirdly, allergic reactions occurred in some  
 17 patients. Reactions were mild - such as an itchy  
 18 rash, but others were more alarming clinically with  
 19 temperature rises and rigors often lasting several  
 20 hours.

21 "Fourthly, its preparation for use and its  
 22 administration are relatively time consuming  
 23 inconvenient. A fridge freezer is necessary for safe  
 24 storage. Generally patients prefer other forms of  
 25 treatment."

1 usage of Factor VIII concentrates that we found,  
 2 February 1970. It's right to note that other  
 3 documents suggest that the caution in relation to this  
 4 particular patient about using cryoprecipitate is  
 5 because of previous reactions to cryoprecipitate and  
 6 concerns about inhibitor development rather than any  
 7 concerns specific -- rather than any issue relating to  
 8 factor concentrates.

9 So that's what we've seen as the first  
 10 documented use of factor concentrates. I think  
 11 elsewhere in the material, Dr Mayne, in her statement,  
 12 suggests that the first usage was in November 1971,  
 13 but she may well have, understandably, forgotten this  
 14 particular incident.

15 **SIR BRIAN LANGSTAFF:** She may also have been referring in  
 16 the latter to commercial concentrate --

17 **MS RICHARDS:** She may.

18 **SIR BRIAN LANGSTAFF:** -- imported -- then it would have  
 19 had been on a named patient basis.

20 **MS RICHARDS:** Yes.

21 **SIR BRIAN LANGSTAFF:** And there's no suggestion in that  
 22 letter that this patient had it on a named patient  
 23 basis. So presumably it must have been some of the  
 24 BPL product, such as it was at the time.

25 **MS RICHARDS:** Yes.

1 **SIR BRIAN LANGSTAFF:** Lister product, I should say.

2 **MS RICHARDS:** Yes. I don't think we -- I'm just looking  
3 at an earlier letter we have about this particular  
4 patient but I don't think it tells us anything in  
5 terms of what the source of the concentrate would be,  
6 but that would seem to be right, sir, given the date.

7 So that's the earliest usage we've identified  
8 from the documents in terms of factor concentrates.  
9 If we go back to Dr Mayne's witness statement  
10 WITN0736009, and if we go to page -- sorry, yes,  
11 WITN0736009. Go to page 11.

12 We can pick up in paragraph 10.2 Dr Mayne's  
13 recollection in her recent witness statements of the  
14 first use of concentrate. She says:

15 "The first use of concentrate in Belfast was in  
16 November 1971. A haemophilic was admitted with severe  
17 intestinal bleeding. Copious amounts of 'cryo' were  
18 ineffective. It was impossible to stop the bleeding.  
19 He had developed a High Responding Inhibitor. It  
20 negated the effect of his treatment."

21 Then she refers to having, earlier that month,  
22 spent some time in the United States doing research at  
23 Brown University, and then in Boston having seen the  
24 new Factor VIII concentrate being used most  
25 effectively. She says she was impressed and brought

41

1 top of the next page, we can see that beneath  
2 Dr Maycock's name we see Dr Mayne was there  
3 representing Professor Nelson of Belfast Haemophilia  
4 Centre.

5 Then if we go to page 6, we just see  
6 a contribution by Dr Mayne to a discussion about --  
7 under the heading -- a broader heading of "The present  
8 and future supply of Factor VIII". Under the  
9 subheading, "How much material was likely to be  
10 needed?", we see recorded this:

11 "Dr E Mayne gave statistics for Belfast and  
12 said that they use material prepared from  
13 approximately 10,000 donors for the management of  
14 their patients. They keep a stock of commercial  
15 concentrate which they find invaluable in the present  
16 troubled times."

17 What the "troubled times" specifically referred  
18 to is not clear but there's information about both  
19 keeping a stock of commercial concentrate and  
20 pool sizes as at 1974.

21 **SIR BRIAN LANGSTAFF:** Yes, the pool size, it doesn't say  
22 whether it's NHS or commercial but, given the scale of  
23 that, that looks very much like commercial.

24 **MS RICHARDS:** It does.

25 **SIR BRIAN LANGSTAFF:** That was her understanding at the

43

1 this information home:

2 "Thus, my senior colleague Dr John Bridges  
3 recalling this information suggested that I speak to  
4 my colleagues in the USA to see if any of the new  
5 concentrate could be procured for this young man ...  
6 I duly made contact. I arranged for a consignment of  
7 'Hemofil' (manufactured by Travenol Laboratories Ltd)  
8 to be sent to Belfast. Coincidentally on that very  
9 [same] day Prof Isley Ingram from St Thomas's in  
10 London had an identical problem. The company agreed  
11 to double the consignment to the UK. The product  
12 arrived in Belfast that evening. After treatment, the  
13 bleeding stopped and the patient remained well until  
14 discharge."

15 Then she says this:

16 "Thereafter, Hemofil was the only commercial  
17 concentrate in use in Belfast for the next three  
18 years."

19 I will look at some more documents about  
20 Hemofil and other products in a moment but if we turn,  
21 before we do that, to CBLA0000187, these are the  
22 minutes of what's described as a "Joint meeting of  
23 Directors of Haemophilia Centres and Blood Transfusion  
24 Directors", held at the Regional Blood Transfusion  
25 Centre in Sheffield, 31 January 1974. If we go to the

42

1 time?

2 **MS RICHARDS:** Yes, precisely.

3 Now, that's the evidence we have about the  
4 introduction and early use of factor concentrates. In  
5 terms of which particular concentrates were used over  
6 the following years I'm going to look, first of all,  
7 at Dr Mayne's statements and reports and then look at  
8 the contemporaneous documents.

9 So if we start with one of her witness  
10 statements, it's WITN0736006. This is her statement  
11 of 21 February 2020. And if we go to the second page  
12 and we pick up in paragraph 5, the bottom half of the  
13 page, I'm going to pick it up in the second line:

14 "The Northern Ireland Blood Transfusion Service  
15 ... did not have the capability to manufacture  
16 concentrate. It provided local volunteer derived,  
17 single donation cryoprecipitate. Therefore, in the  
18 mid-1970s when initiated a Home Treatment Programme  
19 (HT) for severely affected patients commercial Factor  
20 Concentrate had to be used. The following policy for  
21 the [Northern Ireland] Haemophilia Centre was drawn up  
22 by myself is as follows:

23 "i) All HT [so home treatment] patients would  
24 be treated with only one product: KRYOBULIN Immuno  
25 Limited Vienna

44

1 "ii) All non HT patients would be treated with  
 2 HEMOFIL Travenol Laboratories USA  
 3 "iii) All children would continue to be treated  
 4 with cryoprecipitate. There were 2 exceptions; namely  
 5 2 severely affected children who were entered into the  
 6 HT [so home treatment] group."  
 7 There's then an observation that no child  
 8 became HIV positive in Northern Ireland, and I'll come  
 9 back to that when we look at the scale of the  
 10 infections.  
 11 At paragraph 6:  
 12 "At the time there was little scientific basis  
 13 for the preceding policy, merely my innate  
 14 apprehension about injecting material repeatedly, and  
 15 at frequent intervals by the intravenous route, into  
 16 young patients.  
 17 "At the time, I used what I considered to be  
 18 the best and safest product for those patients who  
 19 logically would need/use the most Factor, namely the  
 20 [home treatment] group. I selected KRYOBULIN because  
 21 I found the Company business-like, straightforward and  
 22 their packaging was ideal."  
 23 None of those factors would go to safety. She  
 24 then says, however:  
 25 "Incidentally [which might tend to suggest that

45

1 In fact, there's evidence of supplies being  
 2 received from SNBTS pre-heat treatment, which I'll  
 3 come back to:  
 4 "No supplies were received from the Republic  
 5 of Ireland."  
 6 So that's that witness statement. If we then  
 7 go to --  
 8 **SIR BRIAN LANGSTAFF:** Just pausing there, she makes  
 9 a comment there about Kryobulin and the source of the  
 10 plasma. We know from other sources that in the late  
 11 1970s Immuno were offering Kryobulin manufactured from  
 12 two different plasma sources: one USA plasma, the  
 13 other from European plasma. And the difference being  
 14 that the European plasma cost more, the implication  
 15 being that it was less likely to be infected with the  
 16 hepatitis virus. So it would be interesting to know  
 17 what particular period of time Dr Mayne is talking  
 18 about. She doesn't say, does she?  
 19 **MS RICHARDS:** She doesn't, no.  
 20 **SIR BRIAN LANGSTAFF:** It's a very broad overview, written  
 21 looking back.  
 22 **MS RICHARDS:** It is. We do have a number of the annual  
 23 returns, not all of them, but they do help build up  
 24 a picture and I will come on to those.  
 25 **SIR BRIAN LANGSTAFF:** Thank you.

47

1 it wasn't a primary motivating factor in her mind],  
 2 the source of their donors was within Europe. The  
 3 second product for the non HT patients [so patients  
 4 receiving treatment in hospital, essentially] was  
 5 Hemofil, with which I had been familiar for several  
 6 years, from 1971.  
 7 "In summary the products used within the Centre  
 8 was as follows:  
 9 "a. HT [so home treatment] Group KRYOBULIN  
 10 Immuno  
 11 "b. Non [home treatment] Group -- Hemofil  
 12 Travenol Ltd USA  
 13 "c. Children Cryoprecipitate [manufactured by  
 14 the Northern Ireland Blood Transfusion Service]  
 15 "However, demand exceeded supply within the  
 16 [home treatment] group. The patients found that using  
 17 the prophylaxis resulted in a normal lifestyle. UK  
 18 wide knowledge of good results in [Northern Ireland],  
 19 plus increased demands, resulted in Immuno being  
 20 unable to fulfil [Northern Ireland] orders.  
 21 Therefore, a further supply of Factor VIII was  
 22 obtained from Armour Pharmaceutical Limited USA.  
 23 "In later years when heat treated product  
 24 became available supplies were received from SNBTS and  
 25 Elstree."

46

1 **MS RICHARDS:** But Dr Mayne does not address that; you're  
 2 right.  
 3 If we then go to her most recent statement at  
 4 WITN0736009 and we go to page 12, we can see she's  
 5 been asked what were the reasons that led to the  
 6 choice of one product over another. She says:  
 7 "Kryobulin ... was chosen ..."  
 8 So this is the top of the page:  
 9 "... as the most suitable product for Home  
 10 Treatment ... patients for a variety of reasons."  
 11 Then she gives reasons in the next paragraph:  
 12 "Firstly, the packaging had been well thought  
 13 out by the company. It was eminently suitable for all  
 14 patients requirements to enable an injection to be  
 15 prepared and administered with ease. All components  
 16 were available and presented with clear instructions  
 17 -- right down to the Mister Men plasters! The latter  
 18 amused the adults. The company personnel were  
 19 business-like and efficient."  
 20 So no reference there to donor source as  
 21 a factor for the choice or any different perception in  
 22 terms of safety.  
 23 And then she says in the next paragraph:  
 24 "The only concentrate in use in the Centre  
 25 previously was Hemofil. That company had no Home

48

1 Treatment ... package and did not wish to increase  
2 their commitment to Northern Ireland.  
3 "Therefore, the Centre's treatment policy was  
4 as follows:  
5 "Cryoprecipitate for children  
6 "Hemofil for all non HT patients  
7 "Kryobulin for all HT patients  
8 "thereby attempting to minimise donor exposure  
9 in each group. There was no cross-over of usage  
10 between groups. This is a most relevant point."  
11 So in addition to telling us which products  
12 were used, it would appear from this that part of  
13 Dr Mayne's policy was to keep patients on one product.  
14 The extent to which that was successful or not is  
15 unclear, because certainly annual return information  
16 suggests that there were a number of patients who  
17 received a range of different products, and we'll look  
18 at that in due course.

19 But that's what she says the policy was. And  
20 then she continues in paragraph 10.8:

21 "Furthermore, the number of companies that  
22 would need to be dealt with was also minimised, just  
23 in case of any mishap or complication that might  
24 occur. Always I had concerns regarding the repeated  
25 injections of IV material in relation to the risk of

49

1 an error and it's not consistent with what she says  
2 elsewhere], a third product had to be introduced due  
3 to increased demands for Kryobulin creating  
4 a significant shortage. Armour Pharmaceuticals made  
5 a successful tender and became the provider of the  
6 third product."

7 **SIR BRIAN LANGSTAFF:** If only one company was being used  
8 for home treatment, then I don't understand the logic  
9 of her comment in 10.9, "became necessary to meet  
10 frequently with both companies to plan and adjust  
11 standing orders" when the reason for the increase has  
12 been home treatment demand.

13 **MS RICHARDS:** Yes.

14 **SIR BRIAN LANGSTAFF:** Yes.

15 **MS RICHARDS:** I can't offer an explanation, sir. You are  
16 right to identify. It doesn't entirely add up in  
17 terms of reasoning. As I say, the date of late 1980s  
18 I'm fairly confident isn't correct in terms of needing  
19 to resort to Armour.

20 Sir, before we break, just one other document  
21 on this theme. There are quite a lot of important  
22 documents to look at. This is RHSC0000067\_002. So  
23 this is the same March 1988 report that we've looked  
24 at already on two occasions. If we go to page 5 --  
25 sorry, page 4 -- bottom of the page, she looks at HIV,

51

1 as yet unknown viruses being transmitted."

2 She then, if we just look further down --

3 **SIR BRIAN LANGSTAFF:** Just pausing there, just a few  
4 moments ago you were showing me a document which said  
5 there was no scientific basis for the regime which she  
6 adopted. She's now setting one out.

7 **MS RICHARDS:** Yes.

8 **SIR BRIAN LANGSTAFF:** Yes.

9 **MS RICHARDS:** We then see, paragraph 10.9, she says:

10 "It was difficult in the early days to estimate  
11 the quantities of concentrate required, particularly  
12 for home treatment patients. I came to the conclusion  
13 that these patients would require amounts double or  
14 even treble after their first year of treatment. It  
15 seemed likely that patients would change from using  
16 treatment to stop a bleed when it occurred to taking  
17 treatment to prevent a bleed occurring. Each patient  
18 would develop a particular pattern of prophylaxis to  
19 suit his lifestyle. This scenario did occur. The  
20 expected increase in demand for concentrate developed.  
21 Therefore, it became necessary to meet frequently with  
22 the both companies to plan and adjust standing orders  
23 to obtain discounts for the increased quantities in  
24 use and to ensure continuity of availability.

25 "During the late 1980s [and that, I think, is

50

1 numbers of those infected. I'm going to come on to  
2 that this afternoon or tomorrow but I just want to  
3 pick up what she says about policy, last four lines on  
4 this page:

5 "The figures may be explained on the basis of  
6 the transfusion policy operated in the Haemophilia  
7 Centre since home treatment began in 1974. A single  
8 commercial product was used for all home treatment  
9 patients and a second product was used for the rest.  
10 Thus, patients were exposed to a regular and  
11 restricted number of donors. It is probable that  
12 exposure to many different commercial products  
13 resulted in the higher positivity rates in other  
14 centres."

15 Actually I will just read the whole paragraph,  
16 I think:

17 "Despite using the same quantity of Factor VIII  
18 per patient per year, the Northern Ireland positivity  
19 percentage is equivalent to that in Edinburgh, which  
20 only used local material from the Blood Transfusion  
21 Service and at no time used commercial concentrates  
22 from whatever source. In addition, all the severely  
23 affected patients in Northern Ireland were placed on  
24 product A for both home treatment and inpatients."

25 Pausing there, that doesn't appear to be right

52

1 when we look at the data submitted to Oxford:  
 2 "It so happened that this product was of  
 3 European origin which became contaminated at a later  
 4 date compared with American products. It is likely  
 5 that this caused the smaller number of positivities in  
 6 the Province ..."  
 7 Then that is said to be hopefully a saving for  
 8 the future:  
 9 "... as there will be fewer patients [who]  
 10 develop the full-blown acquired immunodeficiency  
 11 syndrome."  
 12 So that was her evidence in 1988 -- I say  
 13 "evidence", her report in 1988 about the treatment  
 14 policy.  
 15 I'm going to come on to various other  
 16 documents, in particular contemporaneous documents,  
 17 but perhaps we could do that, sir, after the break.  
 18 **SIR BRIAN LANGSTAFF:** Thank you.  
 19 We'll take a break then until well quarter  
 20 to 12.  
 21 **MS RICHARDS:** Thank you, sir.  
 22 **(11.16 am)**  
 23 **(A short break)**  
 24 **(11.44 am)**  
 25 **MS RICHARDS:** Sir, we were looking at documents relating

53

1 a rigidly adhered to policy. This suggests that it  
 2 may not have always been possible to adhere to it, and  
 3 that's borne out by what we will look at in a few  
 4 minutes in terms of the annual returns.  
 5 So:  
 6 "If possible, a home treatment patient would  
 7 continue on the same brand, even should he become an  
 8 inpatient for emergency or planned surgery."  
 9 Again, that is said to be "if possible":  
 10 "Additionally, it was felt important to try and  
 11 treat all children with locally prepared  
 12 Cryoprecipitate in the first instance to avoid  
 13 hepatitis."  
 14 So that's the reason given in this report for  
 15 the usage of cryoprecipitate for children.  
 16 If we go to the next page -- I should say, the  
 17 date of this report is 6 November 1989, and again,  
 18 it's authored by Dr Mayne. So we see Dr Mayne saying  
 19 this:  
 20 "Kryobulin (Immuno Limited, Vienna) was  
 21 selected for the home treatment patients due to its  
 22 ready solubility and easy of preparation."  
 23 Again, no reference there to anything about  
 24 donor pools or donor source:  
 25 "The decision taken at that time was the

55

1 to product usage and treatment policies.  
 2 If we could go next to WITN2658002, and if we  
 3 go to the second page you'll see this is a document  
 4 authored by Dr Mayne called "A synopsis of haemophilia  
 5 re: Mr Malachy Devlin". You will recall, sir, we  
 6 looked at this in some detail during the Belfast  
 7 hearings when we had evidence about Mr Devlin from his  
 8 family.  
 9 For today's purposes, I'm going to see what the  
 10 report says more widely about treatment policies, and  
 11 so if we could go to page 14, please, under the  
 12 heading just over halfway down the page, "Choice of  
 13 material for usage in NIHC", so Northern Ireland  
 14 Haemophilia Centre. "Policy was adopted in 1977",  
 15 this says, which doesn't quite accord with what we've  
 16 seen elsewhere:  
 17 "It concerned the usage of commercial  
 18 factor VIII material. As far as was practical, 'one  
 19 brand' was used for the home treatment patients and  
 20 a second brand for those unsuitable for home  
 21 treatment. Depending upon availability and the  
 22 patient's clinical situation, the policy would be  
 23 maintained."  
 24 Just pausing there, you will see the other  
 25 documents we have looked at tended to suggest this was

54

1 personal one of the Director who felt that it might be  
 2 prudent to restrict heavy users to only one product.  
 3 It was not possible to place all the haemophilic  
 4 patients on home treatment, only those patients with  
 5 good accessible veins, a reasonable intelligence and  
 6 who had someone available at home throughout the  
 7 24-hour period to help with the administration of the  
 8 material could be included. There was an almost equal  
 9 number of non-home treatment patients who were treated  
 10 with a second brand, Hemofil, manufactured by Travenol  
 11 Limited, USA. Hemofil was the first commercial  
 12 product which entered the United Kingdom. It was used  
 13 in the Northern Ireland Haemophilia Centre in the  
 14 early 1970s and at that time had proven to be  
 15 lifesaving. It had less good solubility than  
 16 Kryobulin and thus was more suitable for hospital  
 17 usage when professionals were available to carry out  
 18 its preparation."  
 19 Then continuing down the page:  
 20 "From time to time, when emergencies occurred  
 21 the quantities of material needed and the likely  
 22 duration of the period of treatment had to be  
 23 considered. It was difficult to maintain large stocks  
 24 of material. In general there was more Hemofil in  
 25 stock than Kryobulin, as much of the latter material

56

1 was distributed in the home treatment patients' own  
2 refrigerators throughout the Province."

3 Then she goes on to observe that in 1970  
4 Mr Devlin was treated with Hemofil rather than  
5 Kryobulin. And then she says this:

6 "An unforeseen difficulty occurred in late 1982  
7 and in particular throughout 1983. Due to increased  
8 demands for European origin Kryobulin on a worldwide  
9 basis, standing orders were unable to be met as  
10 a consequence a third brand of material was introduced  
11 to the Haemophilia Centre in the Royal Victoria  
12 Hospital. The third material was Factorate produced  
13 by Armour Limited, USA."

14 Then she goes on to document Mr Devlin's own  
15 treatment.

16 So you'll see there that rather than, as the  
17 witness statement had suggested, it being in the late  
18 80s that a third product had to be introduced, that  
19 the closer in time material suggests that it was due  
20 to an inability to obtain sufficient Kryobulin that  
21 the third concentrate, commercial concentrate,  
22 Factorate was introduced in the early 1980s, in  
23 particular 1983.

24 If we then look at one further contemporaneous  
25 document before we turn to Factor IX and then to the

1 used for some years. There is also loyalty to  
2 Hemofil, because Baxter obviously gave her  
3 considerable financial help in the early days.  
4 Nonetheless, I will be quoting for an annual contract,  
5 hoping that our price will be sufficiently lower to  
6 awaken her interest. The one thing she would not tell  
7 me, was her current buying in price."

8 So what the reference is to current financial  
9 help is not currently known, and I should, in fairness  
10 to Dr Mayne, note that she wasn't asked about this,  
11 hasn't been asked about this at this stage, so we  
12 don't know what she would say in relation to that.

13 It continues on to say that:

14 "She has 2 serious vW patients, one of whom had  
15 300,000 units of human last year. Dr Mayne is very  
16 keen to look at our proposed product in this area.

17 "She feels Feiba is of little value, but  
18 believes Rizza's frequent low human dose discipline  
19 for inhibitors to be of benefit. However, in her view  
20 animal has a definite place and she would like to  
21 study the PE material."

22 We will come back to what Dr Mayne thought of  
23 and what use she made of the Hyate:C porcine product  
24 a little later:

25 "Dr Mayne has a very open personality and is

1 annual returns.

2 Soumik, IPSN0000332\_021, please.

3 This is an internal note from -- it's "DRW",  
4 I think that's Mr Williams of Speywood,  
5 19 October 1978. Sorry, if we just look at the bottom  
6 of the page for a moment, you will see the initials  
7 "DRW" and we will see the date, 19 October 1978.

8 And then if we go to the top of the page, we  
9 see the heading, "Meeting with Dr Mayne, the Royal  
10 Victoria Hospital, Belfast, October 10th 1978". So  
11 this appears to have been the Speywood  
12 representative's visit to Dr Mayne and he is recording  
13 this:

14 "This is the only Haemophilia Centre in  
15 Northern Ireland and there are 120 patients on the  
16 books. 45 are severe and 12 have inhibitors.

17 "Dr Mayne is not prepared to change her present  
18 policy concerning human factor VIII. She uses Hemofil  
19 for operations and Immuno for home treatment [and it's  
20 said then to be 22 patients]. She realises this is  
21 an expensive policy, but feels that treatment changes  
22 are something best avoided with Haemophiliacs. She is  
23 very concerned about liver enzyme changes [so that's  
24 what's recorded about this meeting here], but at least  
25 she knows what to expect with products which have been

1 a very good source of information. We must keep in  
2 touch."

3 So, in any event we see there what Mr Williams'  
4 understanding was of Dr Mayne's approach as at  
5 October 1978 and, in particular, he appears to have  
6 picked up a concern about liver enzyme changes.

7 Just to complete the picture in relation to  
8 interactions with Mr Williams around this time, if we  
9 go to IPSN0000332\_019 -- sorry, Soumik, my apologies  
10 could we go, first of all, to IPSN0000332\_020.

11 We can see there's an exchange of  
12 correspondence, Mr Williams writing to Dr Mayne, on  
13 6 November 1978, referring to the visit, and then  
14 inviting her, in the second paragraph -- whether he  
15 could persuade her to use some Koate, so a fourth  
16 commercial concentrate, and he sets out what the price  
17 would be and sets out what he perceives to be certain  
18 advantages of it.

19 If we go to Dr Mayne's reply, IPSN0000332\_019,  
20 she writes in the second paragraph, second sentence:

21 "It may be possible that I will be  
22 reconsidering the financial expenditure regarding the  
23 purchase of Factor VIII concentrates to other to treat  
24 our haemophilic patients.

25 "If there is any change in my policy, I shall

1 not hesitate to get in touch with you."  
 2 Then if we go to IPCN0000332\_017, we pick this  
 3 up now a few weeks later, in early 1979, and again  
 4 Dr Mayne's writing to Mr Williams at Speywood, and she  
 5 says in the second paragraph:  
 6 "I am most interested in the prices that you  
 7 are quoting for Koate during the forthcoming year.  
 8 I think they are competitive but regret to inform you  
 9 that they are not quite so favourably competitive as  
 10 our present contracts with the two commercial  
 11 Factor VIII firms. However, I have had long  
 12 discussions with my Senior Chief Medical Laboratory  
 13 Scientific Officer in the Blood Bank, with the  
 14 following results:  
 15 "It seems likely that our Home Treatment  
 16 programme will expand and that our needs for  
 17 commercial Factor VIII may expand further due to  
 18 increasing orthopaedic operations, et cetera, being  
 19 carried out on the site. Therefore Mr Carville and  
 20 myself agree that, should expansion become necessary,  
 21 we will be happy to place a further order with your  
 22 firm for any additional supplies of Factor VIII that  
 23 will become necessary.  
 24 "I appreciate that this is a further ray of  
 25 hope but trust you will keep in touch and look forward

61

1 page -- sorry, if we keep going. It's a very long set  
 2 of sub-paragraphs numbered 2. Yes, so if we go to the  
 3 next page. Thank you.  
 4 So if we look at 3.3.2, this is the position in  
 5 relation to Factor IX, she says this:  
 6 "During the early 1970s there was no  
 7 concentrate or product available designed specifically  
 8 to treat patients with Haemophilia B. In order to  
 9 ameliorate this situation I contrived to produce  
 10 locally a product to correct the Factor IX  
 11 deficiency."  
 12 Then she explains that she took her research to  
 13 Dr Bidwell in Oxford. She was initially left with  
 14 a flea in her ear, she says, but then got a call from  
 15 Dr Bidwell who said her research was amazing -- that's  
 16 paragraph 3.3.3 -- but that it was too late for  
 17 implementation. Then at the last few lines of  
 18 paragraph 3.3.3 Dr Mayne says this:  
 19 "At the conclusion of our phone call, she  
 20 suggested that Oxford would send us in Northern  
 21 Ireland some of their own Factor IX concentrate. At  
 22 the time it was not freely available and Northern  
 23 Ireland was fortunate to receive such material  
 24 manufactured from volunteer plasma in England."  
 25 Then in the next paragraph she says that

63

1 to hearing further about your porcine material."  
 2 So that's her communication in relation to the  
 3 possibility of purchasing Koate in the future.  
 4 Then Mr Williams wrote to Dr Mayne in February  
 5 explaining that there was a price reduction in terms  
 6 of the current stocks of Koate because of a change in  
 7 the packaging style, and we can see Dr Mayne's  
 8 response to that at IPSN0000332\_015.  
 9 This is a letter of 16 February 1979 to  
 10 Mr Williams referring to the letter I have just  
 11 mentioned informing her of a price reduction in the  
 12 current stocks, and she says:  
 13 "I have asked Mr John Carville, Chief, Med Lab  
 14 Scientific Officer, to place an order through the  
 15 pharmacy for 30,000 units of the 970 packs ... I would  
 16 be grateful if you would reserve this quantity for us  
 17 until receipt of the order -- persistence is usually  
 18 rewarded."  
 19 So an order placed for Koate in February 1979,  
 20 so an additional commercial concentrate introduced.  
 21 Then in terms of Factor IX concentrates, we can  
 22 perhaps pick this up in one of Dr Mayne's statements.  
 23 It's WITN0736005. And if we could go -- I'm not sure  
 24 of the page number, it's paragraph 3.3, please Soumik.  
 25 So if we go on a couple of pages, go to the next

62

1 commercial products, so commercial Factor IX products,  
 2 were not introduced until the mid-1980s, when UK  
 3 supplies were unable to cope with demand. So NHS  
 4 Factor IX from Oxford is what Dr Mayne says was used  
 5 for the treatment of those with haemophilia B.  
 6 I want to turn next, sir, to the annual returns  
 7 and see what they tell us about actual product use.  
 8 We have a number of annual returns, so if we start  
 9 with the first that we have, which is for 1976, it's  
 10 HCDO0000054\_006. If we look at the top of the page,  
 11 we can see it's "Annual return for 1976 ... materials  
 12 used to treat patients having haemophilia or Christmas  
 13 disease". The director is Dr Nelson. Dr Mayne's name  
 14 is also there.  
 15 "Total number of haemophilic patients treated  
 16 during the year: 37.  
 17 "Number with ... antibodies: 6.  
 18 "Total number of Christmas disease patients  
 19 treated during the year: [7 crossed out] 6."  
 20 That's not 76, that's 6:  
 21 "Number with Factor IX antibodies: NONE."  
 22 Then if we look at the material being used, we  
 23 can see in relation to cryoprecipitate, Factor VIII  
 24 units, 376,190. And then we can see Hemofil, 271,970  
 25 units, and Kryobulin, 151,686 units.

64

1 So a mix there of cryoprecipitate and then, in  
 2 terms of factor concentrates, Hemofil and Kryobulin,  
 3 as Dr Mayne has explained in her statements.  
 4 Then we can see in relation to NHS Factor IX  
 5 concentrate it's the Oxford product, 101,000 units,  
 6 and then there is a small amount of commercial  
 7 Factor IX concentrate, 11,500.  
 8 So it would appear her recollection that it  
 9 wasn't used at all until the 1980s was incorrect but,  
 10 it appears, used there in fairly moderate quantities.  
 11 There's no form available or separate form that  
 12 we have for von Willebrand's disease patients. If we  
 13 look just below the table it says, where there are  
 14 four asterisks:  
 15 "Please do not include von Willebrand's disease  
 16 patients ... on this form ..."  
 17 But we don't have the form for 1976 for  
 18 von Willebrand's patients.  
 19 If we could then turn to the annual return two  
 20 years later, 1978.  
 21 Soumik, that's HCDO0001231. And if we could  
 22 go, first of all, to page 7, and if we could zoom in  
 23 on the top. Thank you.  
 24 So, annual return for 1978. Again, we see  
 25 Professor Nelson and Dr Mayne. Dr Bridges' name is

65

1 And then the Factor IX concentrate has been put in the  
 2 wrong column, we can see from the arrow,  
 3 144,660 units. And then there's some use of FEIBA and  
 4 Proplex, which I think would have been in relation to  
 5 patients with inhibitors.  
 6 If we go over the page, we then have  
 7 information specifically about the material used for  
 8 haemophilia A patients with Factor VIII antibody, so  
 9 inhibitors, and we can see there the amounts being  
 10 used, the small amount of NHS concentrate, Hemofil,  
 11 and then we see a Factor IX concentrate, it's Hyland  
 12 manufactured Proplex. So, again, there is some  
 13 evidence of commercial Factor IX usage. And then  
 14 FEIBA, 41,000 units.  
 15 If we just go further down the page, we can see  
 16 a further 11,500 units of another material and there's  
 17 an explanation in handwriting about the use of that  
 18 for one of the inhibitor patients.  
 19 If we then go on a further two pages, Soumik,  
 20 we do have the separate form for von Willebrand's  
 21 patients for 1978. We can see seven patients treated  
 22 during the year. Cryoprecipitate, 214,716 units. And  
 23 then if we go down to the bottom, we can see there's  
 24 then a small amount of usage of Immuno fibrinogen.  
 25 Actually, I should say, go on -- before I make

67

1 also there and it's right to note that at this point  
 2 in time there's a single return which covers usage at  
 3 the Children's Hospital as well. So it all gets  
 4 caught up in these annual returns rather than there  
 5 being a separate return.  
 6 "Total number of haemophilic patients treated  
 7 during the year: 51.  
 8 "Number with Factor VIII antibodies: 9.  
 9 "... number of Christmas disease patients  
 10 treated during the year: 4."  
 11 Then there's a figure of total amount used to  
 12 treat these patients during the year, which is  
 13 1,352,607. And then if we go further down to look at  
 14 the table, we can see there cryoprecipitate being  
 15 used, 200 and -- I'm not sure whether that's 50 or  
 16 60,000 --  
 17 **SIR BRIAN LANGSTAFF:** I think it's 50.  
 18 **MS RICHARDS:** I think it might be as well.  
 19 250,646 units of Factor VIII.  
 20 And then we can see usage of NHS  
 21 Factor VIII: 186,992.  
 22 So although other materials we've looked at  
 23 would suggest that NHS Factor VIII concentrate wasn't  
 24 available, it appears there was some availability at  
 25 least. Hemofil, 290,599,000. Kryobulin, 334,390.

66

1 my observation -- two further pages. Sorry, Soumik.  
 2 There's a covering letter from Dr Mayne to Ms Spooner  
 3 dated 18 April 1979 enclosing the 1978 returns, and  
 4 she says:  
 5 "A few patients are treated in the peripheral  
 6 hospitals and I find it impossible to obtain accurate  
 7 records of therapeutic materials such as  
 8 cryoprecipitate used in these hospitals."  
 9 So there's -- there may be some inaccuracy in  
 10 the cryoprecipitate figures. She says:  
 11 "... the enclosed results are as accurate as  
 12 possible under the circumstances."  
 13 Those are the overall forms but if we go back  
 14 to page 1, and see if we can get the form the right  
 15 way round, Soumik, what you'll see here, sir, are  
 16 details of what individual patients received and --  
 17 being submitted to Oxford. And we can see if we look  
 18 at the right-hand side, there's the heading:  
 19 "Type of material(s) received during 1978  
 20 (please tick [the] appropriate column(s))."  
 21 All those that are shown on this page there is  
 22 only one tick in relation to the patients. So they  
 23 are receiving one form of product only.  
 24 But if we go to the next page, and again if we  
 25 turn it the other way up, we'll see there that there

68

1 are some patients who receive more than one type of  
 2 treatment. So the first patient, for example, there's  
 3 a tick in the cryoprecipitate column, there's a tick  
 4 in the Edinburgh Factor VIII column and a tick in the  
 5 Hemofil column. The third patient, again, we see  
 6 receiving cryoprecipitate Elstree Factor VIII and  
 7 Hemofil. The fourth patient is identified as  
 8 receiving Hemofil and Kryobulin and other materials,  
 9 as is the last patient listed on this page, Hemofil,  
 10 Kryobulin had other materials.

11 I won't go through all of them but, if we go  
 12 over the page, we'll see, for example, the third  
 13 patient down identified as receiving Elstree  
 14 Factor VIII, Hemofil and other materials.

15 And if we go on just two further pages please,  
 16 Soumik, again we can see, if we look at the last two  
 17 patients listed, one receiving Elstree and Hemofil,  
 18 another receiving Elstree, Hemofil and other products  
 19 and so on.

20 So the policy of keeping patients on one type  
 21 of concentrate product only does not appear to have  
 22 been entirely successful, and we continue to see  
 23 cryoprecipitate usage as well for a number of patients  
 24 who are also receiving factor concentrates.

25 That's 1978. If we can go to the next return,

69

1 If we go over two pages we can see the form for  
 2 inhibitor patients. So we see a breakdown  
 3 there: Hemofil used, NHS Factor IX used and FEIBA  
 4 used.

5 Then if we go to page 6, we see there  
 6 haemophilia carrier treated during the year with  
 7 Immuno concentrate, and then the next page tells us,  
 8 in relation to von Willebrand's, we have eight  
 9 patients treated during that year. Cryoprecipitate is  
 10 the treatment of primary choice, 176,333 units. And  
 11 then we see there an entry for DDAVP. So that's the  
 12 first time it appears, and it appears specifically in  
 13 relation to von Willebrand's patients, not in relation  
 14 to any haemophilia A patients.

15 If we go to the next page, we'll see similar  
 16 information as we saw from the previous return, and  
 17 again we can see that there are some patients who are  
 18 receiving more than one type of material. So, simply  
 19 by way of example, the first patient listed receives  
 20 cryoprecipitate and Hemofil and FEIBA. And then if we  
 21 go over the page -- again, this is just by way of  
 22 example -- the first patient receives cryoprecipitate,  
 23 Elstree Factor VIII and Hemofil. And then the patient  
 24 four rows up from the bottom receives cryoprecipitate,  
 25 Elstree Factor VIII, Hemofil and Kryobulin. And

71

1 which is 1979, it's HCDO0001300. We can see from the  
 2 top of the page, "Annual Return for 1979", the  
 3 director is now solely Dr Mayne, so she's taken over  
 4 from Professor Nelson:

5 "Total number of haemophilic patients treated  
 6 during year: 63."

7 Ten with antibodies. Christmas disease  
 8 patients treated during the year: 2. None with  
 9 Factor IX antibodies.

10 Then if we look at the table, we can see still  
 11 usage of cryoprecipitate but decreasing in quantity,  
 12 120,000. Again, some usage of NHS Factor VIII  
 13 concentrate, 135,483. And then we can see the  
 14 relatively small amount of Koate being used, 27,160.  
 15 And that presumably reflects the purchase made as  
 16 evidenced by the exchange of correspondence with  
 17 Mr Williams of Speywood. The timing fits in that  
 18 regard. So a third commercial concentrate being used  
 19 in 1979.

20 Then we see the figures for Hemofil and  
 21 Kryobulin significantly greater than the previous  
 22 year: 557,655 units of Hemofil, 440,051 units of  
 23 Kryobulin, and then in terms of NHS Factor IX  
 24 concentrate, 194,180, and no commercial Factor IX  
 25 concentrates used.

70

1 again, there are further examples of a number of  
 2 patients receiving more than one type of concentrate  
 3 as well as continuing to receive cryoprecipitate in  
 4 addition to factor concentrates. There are a number  
 5 of pages -- I won't go through the detail of them --  
 6 but the Inquiry has that data which show that it  
 7 wasn't, clearly, always possible to adhere to  
 8 a treatment policy of treating patients with only one  
 9 type of concentrate at all times.

10 **SIR BRIAN LANGSTAFF:** Is there a broad correlation between  
 11 those who are moderate as opposed to severe  
 12 haemophilia A patients, in that the moderates tend to  
 13 be given the variety of product more than the severely  
 14 affected?

15 **MS RICHARDS:** The data on this page would be consistent  
 16 with that. I haven't checked through line by line for  
 17 all the returns for which we have this data to see  
 18 whether that's the case, but we can do so. We'll have  
 19 a look overnight, sir, and I can let you know tomorrow  
 20 what that tends to suggest. We don't have this data  
 21 for every year. We only have it for some of the  
 22 years.

23 Just sticking with the information that appears  
 24 to have been sent with the 1979 annual returns. If we  
 25 go to page 18, Soumik, we can see that data was also

72

1 sent to Oxford setting out hepatitis B status, and  
 2 you'll see that in the right-hand column, and there's  
 3 "no" or "not known" for a majority of patients, "no"  
 4 for a majority of patients, but there are some for  
 5 whom we see "yes" as the answer in that column, in  
 6 terms of hepatitis B antigen status.

7 And if we go to the next page -- so there's two  
 8 on that page. There are seven on that page answered  
 9 "yes" on that column. If we go over to the following  
 10 page there are four with a "yes" in that column. And  
 11 on the last page there is one with a "yes" in that  
 12 column.

13 Those are the returns for 1979. We then have  
 14 returns for 1980. HCDO0001394.

15 If we just zoom in a little closer, thank you,  
 16 we can see the director there is Dr Mayne, and  
 17 Professor Bridges is also given, reflecting the fact  
 18 that there was a single return covering the  
 19 haemophilia reference centre itself but also the  
 20 treatment at the Children's Hospital. So this is the  
 21 1980 annual return:

22 "Total number of Haemophilia A patients treated  
 23 during the year: 65 ...

24 "Total number of von Willebrand's disease  
 25 patients treated during the year: 8."

73

1 see there's also then some reference to porcine  
 2 product being used.

3 **SIR BRIAN LANGSTAFF:** The figure in brackets, does that  
 4 refer to the number of people going on home treatment?

5 **MS RICHARDS:** I think it does. It is certainly consistent  
 6 with what Mr Williams' understanding had been in  
 7 autumn 1978 of the number of patients on home  
 8 treatment. So yes, that would seem highly likely.

9 Porcine Factor VIII concentrate being used, we  
 10 can see 13,420. And then the Immuno FEIBA product,  
 11 84,500. You will note no reference to DDAVP being  
 12 used at all.

13 Then you will see for the von Willebrand's  
 14 disease patients, the only product identified as used  
 15 is cryoprecipitate, and that's all in hospital.

16 If we go to page 3, we can see the figures for  
 17 haemophilia B in that year: 4 patients treated, and  
 18 the product used is NHS Factor IX concentrate at  
 19 17,560 in hospital, 32,870 for home treatment.

20 There's also then an:

21 "NB: 105,564 units used to treat ..."

22 I'm not quite sure what the next word is.

23 **SIR BRIAN LANGSTAFF:** "Several" I think.

24 **MS RICHARDS:** "... several inhibitor patients."

25 **SIR BRIAN LANGSTAFF:** That looks as though it's not

75

1 You will see the forms changed in 1980. So  
 2 here we have a form specifically for haemophilia A,  
 3 haemophilia A carriers and von Willebrand's. And then  
 4 the table is broken down into home treatment and  
 5 hospital treatment.

6 So if we look at the table itself we can see  
 7 cryoprecipitate for hospital treatment. Again, the  
 8 amount used has come down from the previous year,  
 9 it's 71,370. None used for home treatment. The  
 10 amount of NHS Factor VIII concentrate used is recorded  
 11 as 120,672. That's all for in-patient treatment, none  
 12 for home treatment.

13 Then we can see, earlier than the other  
 14 documents had suggested, the introduction of Armour  
 15 Factor VIII. So this would suggest that was in use in  
 16 1980. Quite why and how that fits in with the other  
 17 documentation and Dr Mayne's explanations of her  
 18 treatment policy are unclear. 93,322 units of  
 19 Factor VIII. No Koate this year, so it looks as  
 20 through the purchase from Mr Williams of Speywood may  
 21 have a one-off. And then we see Hemofil, 520,887.

22 That's all for hospital treatment. And then in terms  
 23 of Kryobulin for the home treatment programme, so  
 24 a smaller amount used in hospital, 63,809, and a much  
 25 larger amount used for home treatment, 597,761. We'll

74

1 addressing haemophilia B.

2 **MS RICHARDS:** Yes. So it's not entirely clear. We have  
 3 the usage for haemophilia B patients in the main body  
 4 of the table. It looks like Dr Mayne wanted to record  
 5 additional usage of Factor IX for haemophilia A  
 6 patients with inhibitors somewhere in the returns, and  
 7 she's put it there.

8 **SIR BRIAN LANGSTAFF:** Yes.

9 **MS RICHARDS:** Again, if we go to the next page, we see in  
 10 slightly different format but again the same  
 11 information being submitted about materials used.  
 12 This one is slightly harder to read but again there's  
 13 some patients only receiving a single type of  
 14 material, but if we go to the next page we see  
 15 a number of patients receiving more than one type of  
 16 material. So, for example, the patient that's about  
 17 five lines down is receiving both Hyland and Immuno.  
 18 We can see those two ticks in columns next to each  
 19 other. A little further down, just over halfway down  
 20 the page, there's a patient receiving Hyland and  
 21 Oxford Factor IX and Armour, and then a patient who's  
 22 down as receiving Hyland and Immuno, and then some  
 23 patients just receiving one single product.

24 That pattern -- again, I won't go through all  
 25 of it, but that pattern continues over the following

76

1 pages, with a number of patients receiving more than  
 2 one concentrate, including more than one type of  
 3 commercial concentrate.  
 4 So that's 1980. The next return we have is  
 5 for 1983, and that is HCDO0000153\_003. So the first  
 6 document is in relation to haemophilia A and  
 7 von Willebrand's patients. So we see:  
 8 "Total number of Haemophilia A patients treated  
 9 during the year: 72."  
 10 Not quite clear what is written under -- it  
 11 looks like it might be a 2, for the number of carriers  
 12 of haemophilia A. Then:  
 13 "... von Willebrand's disease patients treated  
 14 during the year: 16."  
 15 Then if we look at the table for haemophilia A  
 16 patients, the amount of cryoprecipitate has come right  
 17 down to 18,210. Volume of NHS factor concentrate not  
 18 dissimilar from previous years: 159,090. And then we  
 19 can see by 1983 a very significant amount of Armour  
 20 Factor VIII being used, and that's for both in-patient  
 21 treatment and home treatment. It's now the largest  
 22 amount used for home treatment in 1983. So the  
 23 in-patient treatment for Factor VIII is 289,630. The  
 24 total use for home treatment is 505,844.  
 25 There's rather less Hemofil being used, 128,983,

77

1 cohort of patients. That's HCDO0000153\_004. We can  
 2 see there are nine patients treated during 1983 who  
 3 had Factor VIII antibodies, ie inhibitors. And we'll  
 4 see that they had been treated with Factor VIII, so  
 5 the Armour product, in hospital: 166,503 units. Some  
 6 treatment with Hemofil in hospital: 56,000. And with  
 7 Kryobulin: 13,434. And then the largest volume is the  
 8 Hyate:C, the porcine product, the Speywood  
 9 product: 609,935. And then we see the figures given  
 10 for Autoplex: 156,870. And FEIBA: 3,500. She's noted  
 11 at the bottom five patients responded well to porcine  
 12 Hyate:C.  
 13 Then, just to complete the picture for 1983, if  
 14 we can go to HCDO0000153\_005, we have the figure for  
 15 haemophilia B patients. Five patients treated during  
 16 the year and we can see the usage is the NHS Factor IX  
 17 concentrate, both in hospital and at home, and the  
 18 quantities there set out.  
 19 The last return we have, the penultimate return  
 20 we have, is for 1984. Soumik, that's HCDO0001789, and  
 21 we can see these are the annual returns for 1984:  
 22 "Total number of Haemophilia A patients treated  
 23 in 1984: 82."  
 24 1 haemophilia A carrier, 8 von Willebrand's  
 25 disease patients.

79

1 in-patient treatment. Kryobulin is still being used  
 2 to a small extent in hospital, 27,419, and to  
 3 a significant extent for home treatment, 422,497. But  
 4 it is apparent that there are now two commercial  
 5 products being used for home treatment: Factor VIII  
 6 and Kryobulin. Which it doesn't appear -- well, it  
 7 accords with what Dr Mayne has said in some parts of  
 8 her evidence but not elsewhere.  
 9 We can then, if we look towards the bottom of  
 10 the column, see porcine Factor VIII being used:  
 11 609,935. FEIBA: 156,870. And Autoplex: 3,500 -- no,  
 12 sorry, I've got those numbers the wrong way round.  
 13 **SIR BRIAN LANGSTAFF:** The other way round.  
 14 **MS RICHARDS:** Autoplex: 156,870. And FEIBA: 3,500.  
 15 Those, I think we see elsewhere, are for  
 16 patients with inhibitors. Then in the column  
 17 "Carriers for haemophilia A" we can see a small amount  
 18 of cryoprecipitate: 8,500. Von Willebrand's, again  
 19 cryoprecipitate is the only product used: 55,710 in  
 20 hospital, 145,020 home treatment. So we can see there  
 21 cryoprecipitate is used for home treatment for  
 22 von Willebrand patients.  
 23 No reference you'll note, sir, to DDAVP usage.  
 24 That's the first part of the 1983 return.  
 25 There's a specific form in relation to the inhibitor

78

1 And then we can then see for the haemophilia A  
 2 patients the product used: cryoprecipitate in  
 3 hospital, so that's gone up from the previous year,  
 4 190,560. NHS Factor VIII concentrate has gone up  
 5 significantly, and that may be because of the  
 6 arrangements that were made with Scotland which I'll  
 7 come on to, 525,710 units used in hospital, 69,810 for  
 8 home treatment.  
 9 We can see that, again, there's very  
 10 substantial usage of the Armour product Factor VIII,  
 11 506,184, in hospital, 394,800 for home treatment.  
 12 Hemofil usage has gone right down to a modest  
 13 24,240 units in hospital. And then Kryobulin is used  
 14 entirely for home treatment, 441,408 units.  
 15 So those on home treatment receiving Kryobulin  
 16 Factor VIII and NHS Factor VIII concentrate.  
 17 And then if we look at the bottom of the page,  
 18 in terms of the porcine Factor VIII concentrate, we  
 19 see a very substantial figure: 777,776. And we can  
 20 see that approximately two-thirds of that was used on  
 21 one patient? Then carriers of haemophilia A  
 22 cryoprecipitate, 4,000 units in hospital. The  
 23 von Willebrand's disease patients, the volume has gone  
 24 up but it appears to be only in hospital not home  
 25 treatment, and that's 1,108,800, is the figure there

80

1 given.  
2 The significance of looking at the concentrates  
3 used in 1983 and 1984 will become particularly  
4 apparent later when we look at the numbers infected  
5 with HIV and the dates of seroconversion because the  
6 available evidence suggests that, for the majority of  
7 those who seroconverted to HIV, the seroconversion  
8 took place in '83 or '84 or, indeed, in I think at  
9 least one case, '85.

10 **SIR BRIAN LANGSTAFF:** Yes.

11 **MS RICHARDS:** So those are the haemophilia A and  
12 von Willebrand's figures.

13 If we go to the next page we see the breakdown  
14 in relation to the eight patients treated with  
15 Factor VIII antibodies. NHS Factor VIII concentrate:  
16 47,920. And then receiving Armour and Travenol in the  
17 smaller quantities there set out, and then much larger  
18 quantities of porcine Factor VIII as set out on the  
19 previous page. NHS Factor IX concentrate used for  
20 inhibitor patients: 202,300. Again, I should have  
21 observed but didn't, in relation to the previous page  
22 no reference to DDAVP at all.

23 Next page, gives us haemophilia B  
24 information: four patients treated in 1984 and we can  
25 see again for that year the sole product recorded is

81

1 the haemophilia A patients a very small amount of  
2 cryoprecipitate used in hospital, 3,780. A much  
3 larger volume of NHS Factor VIII concentrate -- and  
4 the evidence suggests that the Scottish heat-treated  
5 product was being used, not necessarily exclusively  
6 but in part -- so that's 1,421,490. And then we see  
7 Alpha Profilate being used, Armour Factor VIII and  
8 Travenol Hemofil all being used. Again, presumably,  
9 by this time, heat-treated.

10 And then in relation to presumably patients  
11 with inhibitors, porcine Factor VIII and Autoplex and  
12 FEIBA.

13 Then a reference to DDAVP being used for  
14 two patients. So DDAVP makes a late appearance here  
15 in 1986.

16 Also then we have the figures for  
17 von Willebrand's and the carriers of haemophilia A  
18 treated with cryoprecipitate.

19 **SIR BRIAN LANGSTAFF:** Just before we do, there's no  
20 Kryobulin.

21 **MS RICHARDS:** That's right. No Kryobulin at all.

22 **SIR BRIAN LANGSTAFF:** So the shift -- the switch away from  
23 Kryobulin begins -- is some time in '85/'86?

24 **MS RICHARDS:** Yes. We don't have the return for 1985  
25 unfortunately, but, yes, between 1984 and 1986 that

83

1 the NHS Factor IX concentrate: 120,215 for the  
2 hospital and 30,315 for home treatment.

3 Sorry, I should say, if we just go to the next  
4 page we do have some data for this year in terms of  
5 individual patients. Again, we'll look and see  
6 overnight if we can trace any correlation through in  
7 terms of the severity or otherwise of the  
8 haemophilia A, but there are, if we look, for example,  
9 towards the bottom of the page, 5 and 4 entries up  
10 from the bottom of the page, we can see two patients  
11 ticked as receiving both Armour concentrate and Immuno  
12 concentrate and there are further examples on the next  
13 page. A number of patients for whom there is a tick  
14 in the Armour column and in the Immuno column and,  
15 indeed, for some of them, in the Edinburgh Factor VIII  
16 column. And that's a pattern that continues over the  
17 following pages. So whilst there are still some who  
18 receive only one type of material, there are others  
19 who receive two or sometimes three types of material.

20 The last set of returns I'm going to go to is  
21 from 1986, so we're now into the era of largely  
22 heat-treated product.

23 HCDO0000362\_008. So the returns for 1986:  
24 81 haemophilia A patients treated, two haemophilia A  
25 carriers, 11 with von Willebrand's. We see there for

82

1 shift is taking place. It may reflect what was  
2 available in terms of heat-treated product.

3 In terms of haemophilia B, it's the fourth  
4 page, and we can see four patients with haemophilia B  
5 treated, all with NHS Factor IX product in terms of  
6 hospital and home treatment.

7 So that's what the returns tell us.

8 There's one further document from Dr Mayne  
9 from 1985 I should invite you to look at. It's  
10 BHCT0000503. We looked at it earlier, it's the  
11 1 August 1985 document, and if we go to the second  
12 page we looked at it earlier for a snapshot of the  
13 number of patients registered in '84/'85.

14 If we now look at the bottom half of this page  
15 we see what Dr Mayne was writing in August 1985. So  
16 I'll pick it up with the sentence I read before:

17 "In order to simplify the treatment of these  
18 patients, all the blood products necessary for  
19 treatment are held at the Reference Centre and issued  
20 to other hospitals in the Province, specifically  
21 designated for individual patients. Some 38 patients  
22 with Haemophilia A and one with Haemophilia B are on  
23 home treatment [so that's the figure by August 1985].  
24 This implies that they retain their own supplies of  
25 Factor VIII and with the help of relatives, inject

84

1 themselves as soon as a bleed occurs. Up until  
2 December 1984 the treatment was virtually all  
3 commercial imported material and up until the end of  
4 1982 this all originated [and the 'all' does not  
5 appear to be borne out by the returns] from Immuno in  
6 Vienna, namely European Factor VIII. Thereafter the  
7 scare and implications for AIDS made great inroads  
8 into the European supplies, therefore, we were  
9 grateful to receive American material from Armour  
10 Pharmaceutical Company Limited. They were already  
11 regular supplies of material for inpatient surgery."

12 So Dr Mayne is here suggesting that the lack of  
13 availability of the Immuno product was because of the  
14 concerns about AIDS and a greater desire for European  
15 material. Slightly curious wording to suggest,  
16 therefore, grateful to receive American material but,  
17 in any event, you'll see the figures there set out.  
18 I haven't done the maths to see how they correlate  
19 with the returns but we can do that.

20 You'll see she says NHS Factor VIII only became  
21 available in December 1982. Again, that doesn't  
22 appear to be completely accurate when we look at the  
23 returns.

24 **SIR BRIAN LANGSTAFF:** That plainly doesn't fit with the  
25 returns.

85

1 "From December 1984 all commercial material and  
2 NHS material has been ordered by us through the  
3 Regional Blood Transfusion Service, to enable at long  
4 last a regional budgeting system to exist for the  
5 haemophilic population of Northern Ireland."

6 So it would appear that prior to that date it  
7 was ordered directly by the centre, by Dr Mayne, and  
8 that's the date she's given at the point in time when  
9 she places the order through the Blood Transfusion  
10 Service. She goes on to talk about particularly usage  
11 in relation to patients with inhibitors.

12 If we then go to BHCT0000907. This is really  
13 to complete the picture in relation to the  
14 introduction of heat-treated product. Can we go to  
15 the third page.

16 This is a letter from Professor Bloom to  
17 Haemophilia Centre Directors, 9 April 1985, and it's  
18 a questionnaire that he's asking the centre directors  
19 to complete, and he wants to assess the demand for  
20 heat-treated Factor VIII and IX concentrates.

21 If we can then go to page 2, we can see  
22 Dr Mayne's completion of the questionnaire:

23 "Are you still using unheated commercial  
24 Factor VIII: No ...

25 "Are you still using unheated BPL Factor VIII:

87

1 **MS RICHARDS:** No.

2 **SIR BRIAN LANGSTAFF:** Can we just go back to the number of  
3 patients referred to in this earlier because that,  
4 I think, comes to 189. The latest return, the return  
5 for 1984, showed there were 95 patients, that includes  
6 four with haemophilia B, and in 1986, 98.

7 **MS RICHARDS:** Yes, the returns show the number of patients  
8 treated.

9 **SIR BRIAN LANGSTAFF:** So about half, roughly, of the  
10 patient cohort received no treatment during the year?

11 **MS RICHARDS:** That would seem to follow. And that's not  
12 dissimilar to what we've seen in other centres where  
13 those who are mild haemophiliacs don't necessarily  
14 require any treatment for years.

15 If we go over the page -- sorry, back to the  
16 first page, which is the second page of the document,  
17 Dr Mayne says this in the first paragraph:

18 "It is clear from these figures that the  
19 increased use of NHS material should have produced  
20 an economy in the purchase of commercial material but,  
21 due to extensive orthopaedic surgery being necessary  
22 following a series of road traffic accidents and bone  
23 fractures, the increase in NHS material was inadequate  
24 for needs."

25 Then she says this:

86

1 No ...

2 "Are you using cryoprecipitate: Occasionally  
3 for children.

4 "Are you using heat-treated commercial  
5 factor VIII: occasionally.

6 "Are you using heat-treated BPL factor VIII:

7 No.

8 "... unheated BPL factor IX: No.

9 "... heat-treated commercial factor IX: No.

10 "Have you had any significant financial  
11 restrictions on purchase of concentrates: No."

12 Then the completion makes sense when we read  
13 what is set out below:

14 "The [Northern] Ireland centre is being  
15 provided with heat-treated VIII [not quite sure what  
16 the next word is] from Scotland, and unheated IX [it  
17 looks like that says] from the same place."

18 So the writing's not entirely clear but, in any  
19 event, they are being supplied by this time from  
20 Scotland, and we will look at the arrangements for  
21 that in a little more detail.

22 **SIR BRIAN LANGSTAFF:** That's "material", I think, the word  
23 after "IX".

24 **MS RICHARDS:** Yes, you might be right. So it appears to  
25 be:

88

1 "... heat treated [Factor] VIII material from  
2 Scotland, and [looks like] unheated IX material from  
3 the same place."

4 I think is what it says. I'm not entirely  
5 certain about those last two words.

6 **SIR BRIAN LANGSTAFF:** "Same source".

7 **MS RICHARDS:** Yes, I think you're right, sir.

8 So that's what the contemporaneous or near  
9 contemporaneous documentation tells us about actual  
10 product usage. So we've seen from the materials  
11 looked at so far that the home treatment programme  
12 commenced in the mid-'70s, '74 seems to be the  
13 likeliest date, although one of Dr Mayne's statements  
14 recalls it being around 1976.

15 If we look at her statement at WITN0736006.  
16 I'm looking for paragraph H -- sorry, Soumik, again,  
17 I haven't got a page number recorded. Paragraph 8,  
18 sorry. Yes.

19 So we've got figures there in paragraph 8. She  
20 says there a figure of 43 on home treatment. She then  
21 gives the figures about how many became HIV positive.  
22 Again, I'm going to come back to that. Then she says,  
23 in the last sentence of paragraph 8:

24 "... the final number included HT group may be  
25 43 or 47, my memory eludes me."

1 I have found that, coming up to exams et cetera  
2 a small dose of factor VIII is all that is necessary  
3 to keep the haemophilic on an even keel. I think it  
4 is because he realises that people are concerned and  
5 in some way this sorts out the bleeding problems!

6 "I often feel, as doctors, we worry too much  
7 about the number of bleeds that each haemophilic  
8 patient has. It always seems to me to be so much more  
9 important to realise that despite having no clotting  
10 activity of factor VIII in their blood, they do not  
11 bleed each and every day."

12 So some advocacy for prophylactic treatment.  
13 And we can see that in the right-hand side column, if  
14 we just go a little further down the page, Soumik, to  
15 the last paragraph of the article. It's the last  
16 paragraph -- thank you. Right-hand side, it says:

17 "In summary, I think the medical profession  
18 need to provide time, need to seek to have some  
19 permanent staff available for chat sessions",  
20 et cetera, et cetera.

21 Then she says this:

22 "... to encourage patients with inhibitors, to  
23 meet and try to establish a lifestyle that suits them,  
24 to use prophylactic factor VIII in a wise fashion to  
25 help patients over stressful periods of time and to

1 So that's her recollection as to the numbers of  
2 home treated patients. It's not entirely clear where  
3 that figure derives from.

4 In terms of the approach to home treatment,  
5 we've seen reference to patients treating themselves  
6 prophylactically in some of the materials we've looked  
7 at, and that's also addressed by Dr Mayne in an  
8 article in 1979.

9 If we could go to HSOC0022869. If we go to --  
10 sir, this is -- yes, I should say -- a Bulletin,  
11 number 3 of 1979, so The Haemophilia Society magazine.

12 If we go to the second page, we look on the  
13 right-hand column "Annual General Meeting in  
14 Manchester". We can see there was a lecture given by  
15 Dr Mayne, and she then subsequently produced her  
16 recollection of what it was she set out, because the  
17 tape recording of the proceedings had failed.

18 If we look at the next page, in any event, the  
19 middle column, top half of the page, the third  
20 paragraph -- no, sorry, the second paragraph, she  
21 says -- beginning "To this end" -- she says this about  
22 prophylaxis:

23 "To this end I feel that prophylactic treatment  
24 with factor VIII has lot to offer a family to avoid  
25 these stressful situations developing. Certainly

1 operate as widespread a home treatment programme as is  
2 locally possible."

3 So it would appear Dr Mayne an enthusiastic  
4 advocate of home treatment, and that's clear from  
5 other materials, but also an advocate of a degree of  
6 prophylaxis in terms of the approach to home  
7 treatment.

8 We can take that down, thank you.

9 In terms of the particular arrangements for the  
10 supply of products, we saw an example of Dr Milne  
11 communicating directly with Mr Williams of Speywood  
12 about Koate and Hyate:C, and there is also  
13 correspondence which shows her in communication with  
14 BPL and with PFL arranging for concentrate for  
15 particular patients. So it appears to have been very  
16 much Dr Mayne's role to make the arrangements in the  
17 70s and in the early years of the 1980s for the  
18 procurement of the factor concentrates that she wished  
19 to use. There is then, in the first years of the  
20 1980s, the issue about supply from Scotland, and  
21 I just want to pick that up and show you various  
22 documents relating to it.

23 So as well as commercial concentrates,  
24 NHS concentrate was received from Scotland. And if we  
25 go to PRSE0003946, we can see at the Haemophilia

1 Centre Directors meeting of 30 September 1980,  
2 Dr Bridges was not there -- he's in the list of  
3 apologies -- but he was represented by Dr Mayne. If  
4 we go to page 7, please, Soumik, bottom half of the  
5 page, about ten lines up from the bottom, it says:

6 "Dr Mayne enquired whether any way could be  
7 found of fractionating plasma collected from Northern  
8 Ireland. Dr Walford [that's Dr Diana Walford from the  
9 Department of Health] said that this problem was being  
10 looked into."

11 So that's where we see Dr Mayne raising the  
12 question of fractionating Northern Irish plasma,  
13 because there was no facility in Northern Ireland for  
14 the plasma to be fractionated and for concentrates to  
15 be prepared, although Northern Ireland was able to  
16 produce its own cryoprecipitate.

17 We can then pick the picture up a few months  
18 later with CBLA0001294. This is a Department of  
19 Health internal document from February 1981 and it is  
20 a report for the Advisory Committee on the NBTS, the  
21 National Blood Transfusion Service.

22 The background is set out in the first  
23 paragraph:

24 "As Members know" --

25 Sorry, the heading is "Pro rata distribution of

93

1 That 'assessment' is based mainly upon the number of  
2 haemophiliacs treated within each Region in a given  
3 year ... This system is, in effect, weighted to take  
4 account of the spread of haemophiliacs throughout the  
5 country."

6 So that was the existing system. And then  
7 details are given in the next paragraph of the  
8 proposed change in system, "Pro rata distribution":

9 "BPL will calculate how many [international  
10 units] of Factor VIII are due to each [Regional Health  
11 Authority] based upon the quantity and quality of  
12 plasma supplied."

13 Then further detail is given in relation to  
14 that.

15 Then we see, over the page, a particular issue  
16 in relation to how this is going to impact upon  
17 Northern Ireland. So it's the bottom half of the  
18 page, "Other 'users'". So it's set out in the top  
19 half of the page how it's going to work for the  
20 average Regional Health Authority. And then there are  
21 certain specific categories set out: Channel Islands,  
22 Army, Catholic Children's Pilgrimage Trust, and then  
23 Northern Ireland:

24 "The Northern Ireland [Blood Transfusion  
25 Service] currently receives over 1,000 vials a year

95

1 blood products":

2 "As Members know, from 1 April 1981 it is  
3 intended to introduce a system of pro rata  
4 distribution of certain blood products to ensure that  
5 [Regional Health Authorities] receive such products in  
6 proportion to the quantity and quality of plasma sent  
7 to the Blood Products Laboratory (BPL) for  
8 fractionation. [Regional Health Authorities] have  
9 accepted the principle of pro rata distribution for  
10 Factor VIII, Factor IX and albumin containing products  
11 ... This paper puts forward for the Advisory  
12 Committee's consideration possible arrangements for  
13 the distribution of these products."

14 Then in paragraph 2 it explains the current  
15 position in relation to what BPL were producing:  
16 currently producing about 14 million international  
17 units of Factor VIII used in the treatment of  
18 haemophiliacs. The balance of demand is met by  
19 cryoprecipitate manufactured by Regional Transfusion  
20 Centres and by imported commercial products.

21 Paragraph 3 sets out the "Present distribution  
22 arrangements", so it says:

23 "In common with other BPL products, Factor VIII  
24 is distributed broadly on the basis of an assessment  
25 of regional requirements for patients' treatment.

94

1 from BPL."

2 So that will explain why we do see  
3 NHS Factor VIII concentrate appearing in the returns:

4 "However, the Service [that's the Northern  
5 Ireland Blood Transfusion Service] is unable as yet to  
6 supply [fresh frozen plasma] and under the pro rata  
7 system will not be entitled to Factor VIII. This has  
8 been discussed between the Service's Director and  
9 Dr Lane, Director of BPL, [Northern Ireland] BTS is  
10 expected to increase its production of cryoprecipitate  
11 to make up for the loss of Factor VIII supplies from  
12 BPL and, in the longer term, is exploring the  
13 advantages and disadvantages of transporting [fresh  
14 frozen plasma] to BPL or PFC at Edinburgh. ([The  
15 Northern Ireland Blood Transfusion Service's]  
16 difficulty lies both in freezing plasma and in keeping  
17 it frozen on a journey to Elstree or Edinburgh).

18 "Following discussions between officials of  
19 DHSS and the Department of Health and Social Services  
20 in [Northern] Ireland, it is suggested that the  
21 principle of pro rata be applied to [the Northern  
22 Ireland Blood Transfusion Service] in the same way as  
23 to [Regional Health Authorities]."

24 So we see there, sir, no difficulty, it would  
25 appear, in terms of production of cryoprecipitate, but

96

1 the change to the pro rata distribution system is  
2 going to have the effect of Northern Ireland no longer  
3 receiving anything from BPL.

4 If we go to the next page, we can see under the  
5 heading "Summary", paragraph 10, the committee's views  
6 were then being sought on a number of matters  
7 including at 10c4:

8 "Application of pro rata to [Northern]  
9 Ireland ..."

10 If we just go on two further pages, we just see  
11 a table which sets out what is said to be the current  
12 monthly allocation. And if we go down to Belfast,  
13 which is the -- we see the last two entries, Belfast  
14 and Jersey -- the current monthly allocation in terms  
15 of vials is said to be 90, and under the pro rata  
16 process it will be zero. So it will receive nothing  
17 in terms of BPL concentrate.

18 What was done to address that was an  
19 arrangement with Scotland. I want to look at  
20 a handful of documents in this regard but, first of  
21 all, if we go to a document that summarises the  
22 overall position, it's RHSC0000066\_024.

23 So this is just a later document which picks  
24 up -- it's called -- it's from 1989 and it's called  
25 "Blood Transfusion Service financial position on

97

1 Centre Director. All supplies of clotting agents  
2 whether obtained from PFCE and routed through the  
3 Northern Ireland Blood Transfusion Service, or  
4 obtained directly from commercial sources, eg  
5 Profilate, Hyate, Feiba, Autoplex, must be delivered  
6 directly to the Haemophilia Centre.

7 "Mr Carville, the Senior Chief MLSO in the  
8 Blood Bank ... under the direction of Dr Mayne, is  
9 responsible for the ordering and control of all  
10 clotting agent supplies."

11 So, again, very much decisions under the direct  
12 control of Dr Mayne. And that is, in fairness,  
13 absolutely what she says in her witness statement,  
14 that she was the person who was ordering the supplies.

15 So just to return then to the Scottish picture,  
16 if we go to CBLA0001287 --

17 **SIR BRIAN LANGSTAFF:** This document is February '89, is  
18 it?

19 **MS RICHARDS:** Yes, it's a later document. I've referred  
20 to it partly because it just gives a later perspective  
21 on what happened. It confirms the switch took place.

22 What's said there --

23 **SIR BRIAN LANGSTAFF:** I understood from what you have  
24 shown us earlier that from the end of 1984 all the  
25 ordering was done through the Blood Transfusion

99

1 baseline funding". If we go to the second page we can  
2 see -- under the heading "Blood Products", we can see  
3 reference there to blood products being received from  
4 the Protein Fractionation Centre in Edinburgh. And  
5 then it explains that:

6 "Prior to 1982 [so prior to the pro rata  
7 distribution scheme], most blood products provided  
8 through the Blood Transfusion Service were acquired  
9 from [BPL] at Elstree free of charge, but since 1982  
10 when the service was transferred to the PFCE [so  
11 that's Edinburgh], the Blood Transfusion Service has  
12 been required to pay for all products."

13 So we can see that what resulted, ultimately,  
14 was the Blood Transfusion Service in Northern Ireland  
15 receiving NHS product from Edinburgh rather than BPL,  
16 and in return supplying that to the haemophilia  
17 centre.

18 If we just look at the next page, again before  
19 I turn to some of the contemporaneous documents in  
20 relation to the Scottish arrangement, under the  
21 heading "Supplies to the Haemophilia Centre, Royal  
22 Victoria Hospital", what's said there is:

23 "All clotting agents (Factor VIII, Factor IX,  
24 et cetera) are managed exclusively in the Haemophilia  
25 Centre, Royal Victoria Hospital, under Dr Mayne, the

98

1 Service.

2 **MS RICHARDS:** Yes, that's what Dr Mayne had said in  
3 a document, but that doesn't appear to be what's said  
4 here.

5 **SIR BRIAN LANGSTAFF:** This is the pre -- end of '84  
6 position, if it isn't the current position.

7 **MS RICHARDS:** It appears to be being suggested that it's  
8 the current position in 1989. It certainly reflects  
9 everything we've seen about the pre-1984 position.

10 **SIR BRIAN LANGSTAFF:** Yes.

11 **MS RICHARDS:** I think to the extent that there's any lack  
12 of clarity or contradiction in the documents, it's  
13 probably for the period from '85 through to '88.

14 **SIR BRIAN LANGSTAFF:** Yes.

15 **MS RICHARDS:** So if we go then to CBLA0001287, you will  
16 recall we looked at the report to the Advisory  
17 Committee on the National Blood Transfusion Service  
18 about the switch to the pro rata system. And we can  
19 see this is the meeting of the Advisory Committee on  
20 23 February 1981. It has amongst its observers  
21 a Dr Lawson from the Department of Health and Social  
22 Services, Northern Ireland.

23 And then if we go to the second page, halfway  
24 down the page we can see a discussion beginning under  
25 the heading "Pro rata supply of blood products".

100

1 Obviously, we will come back to this, how it  
2 impacts upon Treloars, which is mentioned here, and  
3 more generally when we explore other aspects of the  
4 Inquiry's work. And if we go to the next page, we can  
5 see what was decided in terms of Northern Ireland.  
6 Paragraph 9d:

7 "On the question of 'other users', members  
8 agreed that ...

9 "d. the pro rata scheme should apply to  
10 Northern Ireland. Dr Lawson explained that the  
11 Northern Ireland [Blood Transfusion Service] intended  
12 to send plasma (both time-expired and fresh-frozen) to  
13 the Protein Fractionation Centre, Edinburgh. This had  
14 been agreed by the directors concerned."

15 So that's how the pro rata scheme is now  
16 intended to apply. Belfast will receive its  
17 NHS plasma from Scotland rather than from BPL.

18 If we go to SCGV0000104\_134, we can see  
19 a letter between Belfast and Scotland. It appears to  
20 be between the respective Health Departments of the  
21 two countries, 7 May 1981:

22 "Dear MacPherson ..."

23 This is someone in the Scottish Home and Health  
24 Department:

25 "Supply of blood products to Northern Ireland.

101

1 And then there's a reference also to receipt of  
2 anti-D product which Liberton is unable to provide.

3 Over the page, I don't need to go to the detail  
4 of it, but those are the figures suggested as to what  
5 the Northern Ireland Blood Transfusion Service hope to  
6 make available and what they hope to receive on  
7 a pro rata basis from Edinburgh.

8 So that's an arrangement that began in around  
9 1981/1982. There's a further letter which discusses  
10 the continuation of the arrangement in '84. That's  
11 NIBS0001721, and I'll make this, I think, the last  
12 document before we break. It's from a Dr Darragh of  
13 the Eastern Health and Social Services Board to  
14 Dr Mayne 25 May 1984, and it says in the first  
15 paragraph:

16 "We have recently been monitoring the success  
17 of the Blood Fractionation arrangements with the  
18 Scottish Health Services."

19 Just pausing there, May 1984, sir, we're not  
20 yet in the heat-treated product territory in terms of  
21 what was being received in Belfast.

22 "We have received advice that there is now  
23 a sufficiency of the NHS product to cover all current  
24 demand for Factor VIII."

25 Then it says:

103

1 "I understand you have been aware of  
2 preliminary discussions between the Director of the  
3 Protein Fractionation Centre in Edinburgh and  
4 Dr McClelland of the Northern Ireland Blood  
5 Transfusion Service about a transfer of the Northern  
6 Ireland source of supply for blood products from  
7 Elstree to Liberton. I have received official  
8 confirmation from our Eastern Health and Social  
9 Services Board, which has administrative  
10 responsibility for the Blood Transfusion Service in  
11 Northern Ireland, of its wish to pursue this proposal  
12 and I am therefore writing to seek your Department's  
13 agreement in principle."

14 He then refers to enclosing a note of the  
15 quantities of plasma they are aiming to provide, what  
16 they would like to receive. Then it says:

17 "Subject to agreement being reached, Northern  
18 Ireland should be in a position to send its plasma  
19 (both time-expired and fresh frozen) to Liberton by  
20 October 1981. Because of the 6-month period required  
21 to process the raw material, it will be March 1982  
22 before we would receive any finished products. In the  
23 meantime I am also writing to DHSS (London) seeking  
24 their agreement to the continuation of arrangements  
25 with Elstree to cover this interim period ..."

102

1 "Over the last few months it has become  
2 apparent that there may be a category of patients for  
3 whom the NHS product may not be satisfactory.

4 "You may recall that we embarked on the 'in  
5 house' production in response to a number of issues  
6 one of which was the major financial outlay on  
7 commercial products. At the time there was apparently  
8 a clearly defined National Policy endorsed by the  
9 profession to move towards self-sufficiency with the  
10 implicit assumption that the NHS product would be  
11 an equivalent therapeutic substitute. In reviewing  
12 the local scene we perceive that there are substantial  
13 numbers of people for whom the NHS product does not  
14 appear to be appropriate."

15 Quite why that is said to be the case is  
16 unclear.

17 "Since the policy to which we subscribe through  
18 the DHSS is to use 'in house' products and funding has  
19 been diverted to underwrite this arrangement, we will  
20 require to have substantial clinical evidence to  
21 obtain finance for the continued use of the commercial  
22 products."

23 Then the last paragraph on this page, he says:

24 "Will you please provide us with the names and  
25 clinical reasons why the NHS product is not

104

1 appropriate to those individuals who you envisage as  
2 likely to continue to need the commercial product."  
3 So it's a somewhat curious letter. We haven't  
4 traced a response to it from Dr Mayne, I think, but it  
5 confirms at least that the arrangement with Scotland  
6 was still continuing as at May 1984, and it appears to  
7 contemplate, for financial reasons, a desire to move  
8 away from the use of commercial concentrates towards  
9 a greater use of NHS products.  
10 I think that's probably all that we can glean  
11 from that document.

12 **SIR BRIAN LANGSTAFF:** It actually says that there's enough  
13 NHS product to cover everyone's needs.

14 **MS RICHARDS:** Yes, it does, yes. Whether that is relating  
15 solely to Scottish or a combination of Scottish and  
16 BPL product is unclear. Or unclear from this letter  
17 at least.

18 Sir, there are a small number of other  
19 documents to look at on the issue of the arrangements  
20 with Scotland but we can perhaps do that after lunch.

21 **SIR BRIAN LANGSTAFF:** We'll take a break until 2 o'clock.  
22 (1.03 pm)

(Luncheon Adjournment)

23 (2.00pm)

24 **MS RICHARDS:** Before I deal with the last couple of

105

1 and choice of product.  
2 **SIR BRIAN LANGSTAFF:** It was this change that I had in  
3 mind but you're right, it doesn't necessarily answer  
4 the questions.  
5 **MS RICHARDS:** So then just returning to the position in  
6 relation to the arrangements with Scotland, if we  
7 could go to LOTH000005\_071, so as well as the overall  
8 arrangement that we've seen, which was upon  
9 introduction to the pro rata distribution system  
10 Northern Ireland started to send plasma for  
11 fractionation in Edinburgh and receive the Edinburgh  
12 product in return, there's an exchange of  
13 correspondence which shows a time-limited other  
14 arrangement. This is a letter from Dr McClelland of  
15 the Edinburgh and South East Scotland Regional Blood  
16 Transfusion Service, to distinguish it from Northern  
17 Ireland, to Dr Ludlam. It says:  
18 "Peter Braynion just pointed out to me that we  
19 are continuing to receive substantial deliveries of  
20 PFC Factor VIII from Belfast. I was indeed aware that  
21 you had on one occasion made an exchange with  
22 [Dr Mayne] for some commercial Factor VIII which you  
23 had previously purchased but I did not know that the  
24 process was continuing.  
25 "So far as I know our stock level is low ...

107

1 documents relating to the arrangements with Scotland  
2 there's just one document I wanted to go to in  
3 response to a query you raised, which was about the  
4 question of whether purchasing responsibility  
5 transferred from Dr Mayne to the Blood Transfusion  
6 Service. I'm afraid it doesn't really answer the  
7 question but it does deal with the issue. It's  
8 BHCT0000501, and it's an Eastern Health and Social  
9 Services Board memo dated 25 October 1984. It says:  
10 "Supply of Blood Products.  
11 "It has been agreed that with effect from  
12 1st December 1984, all of the blood products as  
13 identified on the attached schedule must be obtained  
14 from the [Northern Ireland] Blood Transfusion Service  
15 and none should be purchased or obtained by a UMG  
16 directly. Local arrangements should be negotiated  
17 with Dr McClelland, Director, Blood Transfusion  
18 Service."

19 The difficulty is we don't have the schedule  
20 and we're not currently certain what a "UMG" is. But  
21 it appears there was some local change in arrangements  
22 from December 1984. It doesn't appear that Dr Mayne's  
23 role was thereby rendered redundant in any sense and  
24 she certainly appears to regard herself as being  
25 primarily the responsible person for treatment policy

106

1 indeed the total stock situation within the SNBTS is  
2 at present very healthy and I wonder if there is some  
3 specific reason why the exchanges with Belfast are  
4 still necessary and obviously I am concerned that  
5 there may be some difficulty in our local supply  
6 situation which I am not aware of."

7 Then if we go to Dr Ludlam's reply, it's  
8 LOTH000005\_065. It's a letter dated 11 January 1984  
9 from Dr Ludlam to Dr Brian McClelland:

10 "Thank you for your letter of 30th December,  
11 about exchanges of commercial factor VIII with  
12 Belfast. The exchange was agreed early in 1983  
13 because at that time SNBTS factor VIII was in very  
14 short supply. The first part of the exchange arrived  
15 shortly after the negotiations and at the time SNBTS  
16 material markedly improved. The material that has  
17 arrived recently just completes the exchange. As  
18 I understand it, we are now quits with Belfast."

19 So it appears that, as it were, on top of the  
20 overarching arrangement as between Northern Ireland  
21 and the PFC in Edinburgh for the supply of plasma for  
22 fractionation, there was agreed in 1983 between  
23 Dr Ludlam and Dr Mayne, directly, an arrangement  
24 whereby Dr Ludlam sent commercial Factor VIII to  
25 Dr Mayne and Dr Mayne sent back to Edinburgh PFC

108

1 Factor VIII. And the explanation for it is what we  
2 see set out there.

3 **SIR BRIAN LANGSTAFF:** It's not really an explanation of  
4 why it happened but I understand there may have been  
5 a shortage in Scotland, an anticipated shortage at any  
6 rate, that Professor Ludlam was keen to maintain all  
7 his patients so far as he could on locally donated  
8 product. That same could not be true of Northern  
9 Ireland because there had been a variety of products  
10 used; hence his saying, "Well, if you send me back  
11 some of mine, I'll give you some of my commercial."

12 **MS RICHARDS:** Yes. Whether that resulted in a further  
13 spread of different commercial concentrates being used  
14 for individual patients in Northern Ireland in 1983 is  
15 a matter of speculation but it could have been  
16 a consequence of that.

17 So one can see what Dr Ludlam had to gain from  
18 the arrangement, to put it colloquially. It's less  
19 clear what Dr Mayne might have had to gain from the  
20 arrangement because she was giving up NHS in favour of  
21 commercial.

22 **SIR BRIAN LANGSTAFF:** Yes, that was the year that quite  
23 a lot of Factor VIII, Armour Factor VIII, started to  
24 be used --

25 **MS RICHARDS:** It was, yes.

109

1 "Our calculations indicate that these  
2 quantities will provide approximately 1 month's supply  
3 for each region and will be despatched to Belfast [and  
4 then various Scottish Centres] by Red Star delivery on  
5 10 or 11 December."

6 Then the reference is there to what would be  
7 supplied to Edinburgh and Glasgow:

8 "Following this initial supply of heated  
9 product, plans are in hand to supply quantities of  
10 heated product to each RTC equivalent to twice the  
11 min/max stock level to take account of the need to  
12 replace domestic and blood bank stocks. This phase  
13 will commence in the latter half of the week beginning  
14 10 December and should be complete before Christmas,  
15 and should enable continuous supplies of heated  
16 product to be made available to patients after  
17 10 December."

18 Over the next page:

19 "In the New Year, PFC will arrange for  
20 non-heated product to be collected from RTCs and  
21 I would request you make arrangements for this  
22 material to be recalled as widely as possible in  
23 preparation for this replacement programme.  
24 Unfortunately, we have not achieved regional batch  
25 dedication for the initial deliveries although this

111

1 **SIR BRIAN LANGSTAFF:** -- in Belfast. I don't know if that  
2 was the product that was sent over or not.

3 **MS RICHARDS:** We don't know. At least not from the  
4 documentation we've seen so far.

5 **SIR BRIAN LANGSTAFF:** Yes.

6 **MS RICHARDS:** Just then completing the picture in relation  
7 to arrangements with Scotland and moving to the supply  
8 of heat-treated products, if we go to it should be  
9 PRSE0002675, I think. This is a letter  
10 6 December 1984. It's from Dr Perry and it's  
11 addressed to "Transfusion Directors" but it sets out  
12 what's going to be supplied in terms of heat-treated  
13 product. So it's headed "Heat treated Factor VIII":  
14 "I have learnt today that the first infusions  
15 of our dry heated [Factor VIII] were successful in  
16 Edinburgh although we are yet to receive the recovery  
17 and half life data on the one recipient patients. In  
18 the realistic anticipation that this data will be  
19 acceptable I have made arrangements for the first  
20 batches of [Factor VIII] to be despatched to RTCs  
21 [that's Regional Transfusion Centres] as follows."  
22 Then we can see there the reference to Belfast.  
23 So there's an anticipated supply of 661 vials of  
24 heat-treated Factor VIII from Edinburgh to Belfast.  
25 And then in the paragraph below he says:

110

1 will be achieved subsequently."

2 So that was the plan in December. We don't  
3 know the precise date upon which heat-treated Scottish  
4 product began to be available in Belfast but --

5 **SIR BRIAN LANGSTAFF:** That would have been the product  
6 which was heat-treated in anticipation that the  
7 treatment would remove any HIV -- HTLV-III  
8 infectivity, but it had made no expectations of  
9 reducing the hepatitis risk.

10 **MS RICHARDS:** That's right, sir, and you will recall that  
11 this was the subject of some questioning in relation  
12 to Professor Ludlam because of -- that was the product  
13 that was then used over the next period until  
14 a further product became available in Scotland and  
15 there was the question as to whether there should have  
16 been recourse to the BPL product.

17 **SIR BRIAN LANGSTAFF:** Yes, because the Scots were roughly  
18 18 months behind England in introducing a product  
19 which was thought likely to reduce, and shown  
20 ultimately to reduce, the risk of hepatitis.

21 **MS RICHARDS:** Yes. So it would seem from this that  
22 certainly in the early part of 1985 -- and you will  
23 recall Dr Mayne's completion of that survey for  
24 Professor Bloom reflects this -- at least by  
25 April 1985, the heat-treated Factor VIII concentrate

112

1 that Dr Mayne is using is the concentrate supplied by  
 2 Scotland. Whether that changed and she was able to  
 3 access any BPL heated product over the following  
 4 months or 18 months or so is unclear.  
 5 There is then a discussion, and I don't,  
 6 I think, need to go to all the documents, but there's  
 7 a discussion in correspondence about the PFC's  
 8 intended production of their later product, Z8, and  
 9 there's correspondence which contemplates that  
 10 Dr Mayne may be asked to assist with the assessment of  
 11 that in November 1986.  
 12 If we go to PRSE0000129, Soumik, and if we go  
 13 to -- it should be page 39 I think, the long document.  
 14 Yes, this is a letter, February 1988, from  
 15 Dr Mayne to Dr Perry at SNBTS, and it shows -- it  
 16 picks the picture up essentially from July 1987.  
 17 So she says in the second sentence:  
 18 "Treatment commenced ..."  
 19 That's the Z8 Factor VIII, which was dry heated  
 20 at 75 degrees for 72 hours, I think.  
 21 "Treatment commenced shortly after receipt of  
 22 Factor Z8 in July of last year. To date some  
 23 28 patients have been treated on many occasions with  
 24 7 batches. There's only been one adverse clinical  
 25 reaction ..."

113

1 which Dr Mayne wrote to Dr Ludlam. It says:  
 2 "Thank you both [I'm not sure who the both are]  
 3 for coming over to Belfast last week. I do think that  
 4 the meeting was very worthwhile.  
 5 "The allocation for Scottish Factor VIII to  
 6 Northern Ireland is 1.8 million units per annum.  
 7 After our discussions with [and she identifies three  
 8 people of whom the third is the MLSO we've seen  
 9 referred to elsewhere] I feel it would be appropriate  
 10 and possible, on a short term basis to allocate  
 11 approximately 1 million units of the Northern Ireland  
 12 allocation to the Lothian Health Board. In return the  
 13 Eastern Health Board here should receive the  
 14 equivalent number of Factor VIII units in the form of  
 15 Profilate, for use in our Regional Centre."  
 16 Then there's a suggested date. And then she  
 17 says:  
 18 "However, I feel that our situation should be  
 19 kept under close review by both of us, because since  
 20 we met I have learnt that the supplies of Profilate  
 21 are likely to be in shortfall by the end of this  
 22 calendar year. Furthermore complications may arise  
 23 for this product or indeed a safer product may become  
 24 available. Therefore it would be unwise to be  
 25 obtaining more than monthly supplies of Profilate."

115

1 Then there's details of that particular  
 2 clinical reaction which was someone in the Children's  
 3 Hospital developing "clinical jaundice and blood  
 4 results in keeping with non-A non-B hepatitis".  
 5 There are later letters -- I don't propose to  
 6 go into the detail of the individual patient's  
 7 position, but there are later letters which suggest  
 8 that that patient in fact may have had an older  
 9 generation product that hadn't been heat-treated to  
 10 the same degree, and those documents are referenced in  
 11 our note.  
 12 So by '87, it would seem, a number of patients  
 13 being treated with Z8, so the --  
 14 **SIR BRIAN LANGSTAFF:** From the middle of '87.  
 15 **MS RICHARDS:** By the middle of '87, yes, by the later  
 16 generation. Obviously, that 28 patients doesn't  
 17 represent all of the patients within the Belfast  
 18 centre.  
 19 There is a further exchange of correspondence  
 20 in '88 about another potential switch between NHS and  
 21 commercial product between Dr Mayne and  
 22 Professor Ludlam and, again, it may just be  
 23 instructive to look at that.  
 24 If we start with Dr Mayne's letter at  
 25 NIBS0001762, this is a letter dated 26 September 1988

114

1 And if we go over the page the letter  
 2 continues:  
 3 "I am happy for us to try this arrangement as  
 4 long as the treatment of the children here and the  
 5 small number of other patients is safeguarded. I have  
 6 discussed this with John Carville and in the meantime  
 7 we will run down our usage of NHS material and  
 8 gradually change the home treatment over to  
 9 Profilate."  
 10 Then she says this:  
 11 "It would be interesting to see the reactions  
 12 of the patients to this change over and to see if the  
 13 number of units consumed is reduced."  
 14 Then there's reference to there being sludge  
 15 left in some of the returned bottles which  
 16 arrived with the MLSO for disposal.  
 17 So the proposal is that, again, there will be  
 18 essentially a swap and some of the Scottish NHS  
 19 Factor VIII which would have been sent to Belfast will  
 20 be kept in Edinburgh, and in exchange Edinburgh will  
 21 provide Profilate to Dr Mayne.  
 22 There's one further letter in which this is  
 23 discussed again --  
 24 **SIR BRIAN LANGSTAFF:** There's also the implicit suggestion  
 25 there that the patients will not have been asked in

116

1 advance. It is going to be given to them and they  
2 wait to see what their reaction is.

3 **MS RICHARDS:** Yes, there doesn't appear to be any  
4 suggestion of an element of choice.

5 **SIR BRIAN LANGSTAFF:** No. There's an element of using the  
6 patients to an extent as guinea pigs. I don't mean in  
7 the sense of having a different treatment but in the  
8 sense of having a different product.

9 **MS RICHARDS:** Yes.  
10 There's a letter that was written  
11 September 1988. There's a letter November 1988 to  
12 Dr Mayne to Professor Cash on the same issue at  
13 NIBS0001767, where she says this:

14 "I understand from Dr Morris McClelland and  
15 Dr Chris Ludlam that you have been anxious to discuss  
16 the present somewhat ad hoc and interim arrangements  
17 regarding the exchange of NHS Factor VIII vis-a-vis  
18 Profilate. May I explain the situation to you as it  
19 has arisen.

20 "On September 5, 1988, at the Reference Centre  
21 Directors meeting in London, Chris Ludlam indicated to  
22 me that there would be a shortfall of NHS material in  
23 Scotland and that it would be necessary to top up  
24 needs with commercial factor VIII. The Alpha product,  
25 Profilate, was mentioned. In view of the widespread

117

1 to review it, eg its workability, et cetera, in  
2 January 1989. It was felt appropriate to try it out  
3 until the end of the financial year."

4 Over the page:  
5 "I'm sorry to learn from Dr McClelland that  
6 there may be difficulties in carrying this out.  
7 Morris has suggested to me that you would like  
8 a letter sent from the Eastern Health and Social  
9 Services Board here to the CSA in Scotland, making  
10 a formal request for the arrangements to be carried  
11 out. I am reluctant to do this as I feel it would  
12 appear that I was requesting commercial factor VIII in  
13 preference to NHS factor VIII."

14 Which is essentially exactly what was  
15 happening.

16 "That is not the case. The arrangements were  
17 made purely and solely to try and produce the best  
18 therapeutic benefit for the most patients. However,  
19 it must be said that one or two patients here have a  
20 strong preference for the Scottish material and they  
21 are balanced by one or two who are delighted to  
22 commercial material in the form of Profilate, rather  
23 than to receive any donations from Edinburgh.

24 "I look forward to having further discussions  
25 with you as soon as convenient."

119

1 discussions regarding alterations in immunological  
2 tolerance in multi-transfused patients, I made  
3 a suggestion to Chris. There exists in Scotland  
4 children and other patients who have only been exposed  
5 to the NHS donor population. They have never received  
6 commercial concentrate at any rate. In Northern  
7 Ireland up until 1985, all patients except children  
8 were exposed to commercial factor VIII: therefore  
9 I suggested to Chris that it might be worthwhile to  
10 consider an exchange basis to enable all patients who  
11 had never received other than NHS factor VIII to  
12 continue to do. I would be happy to let them have my  
13 allocation of NHS factor VIII, barring the needs for  
14 the children here and one or two patients who were in  
15 the same category as those in Scotland, namely never  
16 exposed to commercial material. During the past few  
17 years I have used Profilate for replacement therapy  
18 during surgery, et cetera, and was happy to make some  
19 arrangements which would be beneficial to the majority  
20 of patients in both situations, ie Northern Ireland  
21 and Scotland.

22 "Since September various discussions have taken  
23 place between other Centre Directors and I understood  
24 that there was no bar to this arrangement. It is not  
25 envisaged on a permanent basis and indeed, one seeks

118

1 So how that was resolved again is unclear, but  
2 that was, again, further arrangements proposed between  
3 Scotland and Edinburgh and Belfast for an exchange of  
4 Scottish NHS material which would be retained  
5 in Scotland and commercial material which would be  
6 used in Northern Ireland.

7 In terms, then, of other products that were  
8 used during the 1970s or first half of the 1980s,  
9 we've seen reference in the annual returns to the use  
10 of porcine Factor VIII, and the litigation report  
11 prepared by Dr Mayne for the HIV litigation addresses  
12 the use of porcine Factor VIII in more detail.

13 It's CBLA0000072\_024. And if we go to page 10,  
14 I think, Soumik -- yes.

15 So we can see in the first main paragraph she  
16 refers to animal Factor VIII concentrates, sets out  
17 a number of matters of the history in terms of their  
18 usage. If we go further down the page, she refers  
19 then, in 1981, to:

20 "... a new polyelectrolyte fractionation  
21 process [and we see that referred to in some of the  
22 documents as the 'PE process'] for the production of  
23 a pure porcine Factor VIII was developed."

24 She explains it was used to treat a patient  
25 with a high responding inhibitor in 1981.

120

1 And the reference there is Mayne et al, so  
2 used, I think, in Belfast.  
3 "Further extensive experience was reported by  
4 Kernoff et al ...

5 "The porcine material was found to be  
6 efficacious to a high degree in patients whose  
7 inhibitor was less reactive against porcine VIII than  
8 against human VIII. Despite suitability, treatment  
9 could not be continued indefinitely, due to the  
10 development of refractoriness or the occurrence of  
11 reactions. Many of the latter were mild, such as  
12 slight chills or the occasionally skin rash but as  
13 with other treatments, a few patients developed asthma  
14 attacks or anaphylaxis. However, some patients were  
15 and are able to use the porcine Factor VIII for home  
16 treatment. Its advantages are the lack of known viral  
17 transmission and its disadvantages are its limited  
18 suitability and the occurrence of side effects."

19 So that's Dr Mayne's views as expressed in her  
20 May 1990 report about porcine Factor VIII, and we saw  
21 its use from the annual returns, and there's a further  
22 Speywood document -- I don't propose to go to it but  
23 again the details are set out in our note -- which  
24 record that Belfast was Speywood's largest customer  
25 for porcine Factor VIII in 1983.

121

1 Then she sets out some perceived disadvantages.  
2 Says it's not advocated in older patients and so on.

3 Again, we've seen from the annual returns DDAVP  
4 is mentioned but comparatively infrequently. The  
5 annual returns don't suggest it was being used to  
6 a significant extent in Belfast.

7 She refers in the next paragraph to tranexamic  
8 acid. So if we can go further down the page. The  
9 paragraph beginning:

10 "... female patients with the von Willebrand  
11 syndrome ..."

12 Then she refers in the course of that paragraph  
13 to the use of tranexamic acid and suggests that that  
14 has a place in von Willebrand cases and in mild and  
15 moderately affected haemophiliacs as well,  
16 particularly in relation to dental care.

17 So that's the available evidence in relation to  
18 other blood products -- sorry, other treatments,  
19 non-blood products.

20 I should then just touch upon what Dr Mayne  
21 says in relation to self-sufficiency as a topic. We  
22 can pick that up, first of all, again in her  
23 litigation report. I think we're already on that  
24 document. It's CBLA0000072\_024. Yes, it's a long  
25 document, so let me just find the right page number.

123

1 It's also right to note that obviously it was  
2 being used predominantly for inhibitor patients,  
3 possibly solely for inhibitor patients, and Dr Mayne  
4 records elsewhere that Belfast had a relatively high  
5 number of patients with inhibitors. So that may  
6 reflect its fairly extensive usage within Belfast.

7 Sticking with this report, Dr Mayne then goes  
8 on to talk about other products. So she refers in the  
9 next paragraph to FEIBA from Immuno and Autoplex from  
10 Baxter, and she says:

11 "Many patients do respond to such treatment but  
12 it is not effective in all cases."

13 And again we've seen both of those products  
14 featuring on the annual returns.

15 Then in the next paragraph she refers to DDAVP,  
16 and she says, bottom of the page -- towards the bottom  
17 of the page:

18 "This agent has proven to be of value in  
19 treating patients with mild to moderate haemophilia or  
20 the von Willebrand syndrome. It is administered by  
21 slow intravenous injection and a fourfold rise in the  
22 level of Factor VIII can be expected above the  
23 starting basal level. Such response is sufficient to  
24 allow the performance of dental or minor surgery  
25 without recourse to plasma products."

122

1 I think it's probably page 20, Soumik. Go to  
2 the next page. Yes.

3 So under the heading, "The economics of  
4 self-sufficiency", Dr Mayne sets out, if you go  
5 further down the page, towards the end of the first  
6 long paragraph, in the last five or six lines of this  
7 paragraph she says:

8 "Sustaining self treatment was and is costly in  
9 terms of Factor concentrate purchase but hospital  
10 savings were and are substantial."

11 So she is suggesting an economic benefit to  
12 self-sufficiency. And says in the next paragraph,  
13 picking it up three lines down from the top:

14 "Thus the accrued savings from decreased  
15 hospitalisation, from non-payment of social services  
16 benefits for patients in gainful employment need to be  
17 balanced against the capital and revenue expenditure  
18 required to achieve self sufficiency status and the  
19 outlay for purchase of Factor concentrates."

20 Then, over the page, she talks about the stance  
21 of the UK Haemophilia Centre Directors at their annual  
22 general meetings towards the issue of  
23 self-sufficiency.

24 She says that at the earliest of their annual  
25 general meetings, 1969 onwards --

124

1 **SIR BRIAN LANGSTAFF:** Just pause there for a moment.  
 2 Just puzzling over the economics there, because  
 3 what she's referring to, if we go back a page, and  
 4 looking at the bottom, the study by Schimpf, this  
 5 requires a patient to be treated. The issue --  
 6 economic issue for self-sufficiency is whether the  
 7 costs of providing it within the nation state are less  
 8 than the overall costs of bringing it in, but there's  
 9 no question about not having treatment. In other  
 10 words, the money you save by having someone fully  
 11 working is saved anyway. It's not a choice between  
 12 commercial product or self-sufficient product, is it?  
 13 **MS RICHARDS:** No. I mean, I'm simply reading Dr Mayne's  
 14 words, sir --  
 15 **SIR BRIAN LANGSTAFF:** No, I know, I'm just commenting on  
 16 the logic because it just suddenly struck me. But  
 17 it's not really an argument.  
 18 **MS RICHARDS:** Yes.  
 19 **SIR BRIAN LANGSTAFF:** However, that's what she's putting  
 20 out here.  
 21 **MS RICHARDS:** It's the view she was expressing in 1990.  
 22 **SIR BRIAN LANGSTAFF:** Yes. Well, it's a viewpoint which,  
 23 at the moment, I'm struggling to see that it does  
 24 actually make a valid point. This part of it.  
 25 **MS RICHARDS:** Over the page she then sets out the

125

1 not be precise as on occasions Haemophiliacs were and  
 2 still are treated periodically outside the recognised  
 3 Haemophilia Centres, thus, with loss of data to the  
 4 records. However, they do illustrate the clearcut  
 5 trends of treatment."  
 6 And then she refers to various published  
 7 estimates from Biggs in 1978 onwards.  
 8 If we go to the next paragraph, she talks about  
 9 other -- so apart from estimation of need, which she's  
 10 identified as a problem:  
 11 "... other problems concerned the producers in  
 12 the plasma fractionation centres in Oxford, Elstree  
 13 and Scotland. They concerned source plasma in respect  
 14 of quality and quantity, the changing technology  
 15 necessary to improve the purity of product, the  
 16 availability of manufacturing facilities and necessary  
 17 organisational changes."  
 18 So in the next paragraph she talks about the  
 19 need to introduce modifications into blood transfusion  
 20 practice to increase quantity of plasma available.  
 21 Then if we go over the page, picking it up in  
 22 the second paragraph, she refers to the Haemophilia  
 23 Centre Directors during 1974 expressing further  
 24 anxiety regarding self-sufficiency, feeling the  
 25 Department of Health were slow to realise the full

127

1 perspective of Haemophilia Centre Directors in  
 2 relation to self-sufficiency. She talks about it  
 3 having been reflected on and discussed constantly at  
 4 UKHCDO annual general meetings. She says that:  
 5 "Self-sufficiency was and still is a desirable  
 6 goal but achievement is easier in theory than in  
 7 practice."  
 8 She says:  
 9 "Different problems affected treaters,  
 10 consumers and producers."  
 11 And then this:  
 12 "The treaters had difficulty in making accurate  
 13 forward estimates of the need. Treatment efficacy  
 14 caused consumer demands to ever multiply."  
 15 Then she explains the shift from responding to  
 16 emergency bleeding episodes through self-treatment  
 17 programmes, elective surgery and the like.  
 18 If we go to the bottom of the page, it refers  
 19 to the collection of statistics in Oxford and says in  
 20 the last few lines:  
 21 "The figures are not absolute, they do not  
 22 represent each and every unit of Factor VIII given as  
 23 treatment in any one year. Inevitably over the years  
 24 a minority of treatment centres were tardy in  
 25 submitting data and indeed the submitted figures may

126

1 implications of non-achievement of self-sufficiency.  
 2 Reference to concerns about the scaling up of  
 3 production.  
 4 Bottom of the page, she says:  
 5 "Towards the end of 1975 ..."  
 6 You will see there, sir, a paragraph number,  
 7 and there are various paragraph numbers referred to  
 8 throughout this report. They are references to one  
 9 version of the Statement of Claim in the HIV  
 10 litigation which she's commenting on. So she says:  
 11 "Towards the end of 1975 ... it was suggested  
 12 that Scotland could supply more Factor VIII to aid the  
 13 self-sufficiency programme. However, during prolonged  
 14 subsequent negotiations it transpired that shift  
 15 system of staffing would be necessary to render the  
 16 suggestion operational. Such arrangements were  
 17 unacceptable to trade union policies, then in  
 18 operation, thus causing further delays in a possible  
 19 field of improvement. Other highlighted difficulties  
 20 were in the collection, transport and delivery of  
 21 plasma to the plasma fractionation centre in  
 22 Edinburgh."  
 23 You see in brackets that's said to be based  
 24 upon personal recollections, ie her own recollections,  
 25 of discussions at the time.

128

1 Then in the next paragraph she deals with  
 2 financial input and says:  
 3 "If the organisational difficulties and plasma  
 4 supply problems were to be set aside, the fiscal  
 5 element in the achievement of self-sufficiency then  
 6 becomes the most pertinent problem. If the Department  
 7 of Health had provided further financial support at  
 8 an earlier time, would this have accrued significant  
 9 patient benefit? The reply is probably in the  
 10 affirmative."

11 Is her view. She then gives the example of the  
 12 Netherlands and the overall HIV infection rates there,  
 13 and notes that 75 per cent of the blood product used  
 14 there was obtained from domestic volunteer donors.

15 "In respect of the numbers of Haemophiliacs  
 16 needing treatment in the [UK], could scaling up of  
 17 production, et cetera have been achieved sufficiently  
 18 rapidly to achieve a similar result?"

19 Then her answer is this:

20 "Instinctively the treaters of the Haemophiliac  
 21 patients would feel it to be likely but it is by no  
 22 means certain."

23 So whether feeling it to be likely is to be  
 24 equated with likely as distinct from certain is not  
 25 entirely clear from this.

129

1 problems of haemophilia, they seemed to be deployed  
 2 elsewhere."

3 Then if we go towards the bottom of the page,  
 4 she says at paragraph 96.3:

5 "Supply of factor concentrates became the issue  
 6 once they [were] commercially available."

7 And then she says this -- and again, sir,  
 8 whether this is consistent with what the other  
 9 documentary evidence suggests is a matter for you, but  
 10 she says in this statement:

11 "In order to meet the Centre's need for  
 12 Factor VIII I endeavoured to procure as much NHS  
 13 concentrate as possible. There were three sources of  
 14 NHS concentrate -- BPL at Elstree, Oxford Fraction  
 15 Centre, and SNBTS Edinburgh."

16 And then she refers in the next paragraph to  
 17 the arrangement put in place with Edinburgh.

18 "In 1982 it was arranged that plasma from  
 19 [Northern Ireland] donors be sent to Edinburgh SNBTS.  
 20 An appropriate reciprocal amount of NHS concentrate  
 21 would be returned to Belfast. Doing the best I can to  
 22 recall, initially the NHS supply of concentrate was in  
 23 the order of 10 per cent of the amount used. Over  
 24 time this increased significantly, but I am unable to  
 25 be precise. It is true to state that Northern Ireland

131

1 And then she says it's recognised that the  
 2 supply of volunteer donors is not inexhaustible.  
 3 So those were Dr Mayne's observations in what  
 4 was obviously a report, an expert report, prepared at  
 5 the request of the Department of Health in the HIV  
 6 litigation.

7 In terms of her more recent reflections in her  
 8 witness statement, if we could turn to WITN0736009.

9 If we could go to I think it's page 59, Soumik.  
 10 Yes.

11 So she was asked further questions about her  
 12 views on self-sufficiency, in particular in light of  
 13 what she'd said in the HIV litigation report. And at  
 14 the top of the page you will see she says:

15 "In the early to mid-1970s discussion rotated  
 16 around the financial and practical difficulties in  
 17 upgrading the facilities at Elstree and at Oxford but  
 18 I do not remember precise details."

19 Then she says:

20 "From and around this time self-sufficiency was  
 21 a constant item on the agenda. However, it seemed to  
 22 me that haemophilia generally and self-sufficiency in  
 23 particular was a low priority for Government. As soon  
 24 as the representative from the Department of Health  
 25 became knowledgeable and was sympathetic towards the

130

1 never became self-sufficient in NHS concentrate. The  
 2 aforesaid arrangements were put in place as it was  
 3 unrealistic to establish a plasma fractionation unit  
 4 in Northern Ireland."

5 She then refers in the next paragraph to two  
 6 documents, both of which we've looked at in the course  
 7 of the morning.

8 Then if we go to page 65 and we pick it up in  
 9 paragraph 104.1, she says:

10 "Northern Ireland was self-sufficient in the  
 11 supply of cryoprecipitate at all times. However,  
 12 supplies of NHS concentrate were never sufficient to  
 13 meet demand. We received limited quantities of  
 14 concentrate from Elstree and Oxford, although this was  
 15 largely on the basis of the good relationship I had  
 16 with Dr Lane and Drs Bidwell and Grant respectively.  
 17 From 1982, Northern Ireland had an arrangement with  
 18 SNBTS for the supply of NHS concentrate from PFC. The  
 19 amount of NHS from PFC increased in the following  
 20 years. I am unable to say at this time what  
 21 proportion of concentrate used in the Belfast Centre  
 22 was NHS concentrate. The remainder was from  
 23 commercial concentrates. I would add that I believe  
 24 the NHS suppliers did an excellent job with the  
 25 limited resources they had."

132

1 Then she was asked in the next question whether  
2 she thought a significant contributory factor was  
3 a failure to provide accurate and timely estimates of  
4 future demand. And of course that was one of the very  
5 points she had made in the HIV litigation report.  
6 However, her response in this statement is to say:  
7 "I disagree with this statement. I think it is  
8 difficult for those not involved at the time to  
9 appreciate fully the monumental task of providing  
10 estimates. The difficulty of doing so and keeping  
11 your own clinical work going was great. I do not  
12 believe that I, or other clinicians, could have done  
13 more. I consider the estimates were as good as they  
14 could be given the variables that inevitably arise in  
15 the treatment of haemophilia."

16 So those are some of Dr Mayne's reflections in  
17 1990 and in 2021 on issues relating to  
18 self-sufficiency both generally and as they more  
19 directly pertain to Northern Ireland.

20 Sir, we have in our written note also set out  
21 various matters relating to usage of high purity  
22 products in the late 80s and early 90s, and then the  
23 introduction of recombinant. I'm not proposing to  
24 deal with those now orally but we have all the  
25 references I think that are relevant set out in our

133

1 in the 1970s. I would have thought that I would have  
2 been aware of the risk of [non-A, non-B] hepatitis  
3 really from the mid-1980s onwards."

4 Sir, whether that's right or not would be  
5 a matter for your judgment but it seems that that may  
6 be likely to be a failure of recollection, given  
7 everything else we know about knowledge of hepatitis  
8 in the course of the 1970s.

9 In the next paragraph he says his understanding  
10 was that:

11 "Commercial products carried a greater risk [of  
12 infection] because they were sourced from multiple  
13 donors, including higher risk groups such as drug  
14 addicts and others."

15 So that's Professor Bridges in his statement.

16 Sorry, I should perhaps just also refer -- I think  
17 it's probably the bottom of page 11, Soumik.  
18 My pagination's gone awry. Yes, bottom of the page.

19 He was asked about what information was  
20 provided to patients. He says -- about risks of  
21 infection.

22 He says:

23 "I was not involved providing information of  
24 this nature to patients. The risk of hepatitis was  
25 not widely known during the time I was treating

135

1 written note.

2 The position in terms of recombinant appears to  
3 be, in terms of the Dr Mayne era, that by  
4 February 1997 children and/or previously untreated  
5 patients in Northern Ireland were receiving  
6 recombinant.

7 The more up-to-date position, in the years that  
8 followed Dr Mayne's retirement, are dealt with in the  
9 statement of Dr Julia Anderson and can be picked up  
10 with Dr Benson later this week.

11 I'm therefore going to turn now, sir, to the  
12 knowledge of risk of viral infection in  
13 Northern Ireland, and in particular on the part of  
14 Dr Mayne and others concerned with the haemophilia  
15 centre, both in relation to hepatitis and HIV, and I'm  
16 going to deal with those separately and start with the  
17 issue of hepatitis.

18 If we begin with what Professor Bridges says in  
19 his statement about his perspective, it's at  
20 WITN4569001, and he says, if we go to -- I think it's  
21 page 7. He says at the top of the page:

22 "I became aware of the risks of hepatitis  
23 associated with the use of blood and blood products  
24 but I am not sure of the exact time. I do not recall  
25 being aware of the risks of [non-A, non-B] hepatitis

134

1 children with cryoprecipitate [that's the 1960s and  
2 1970s, up to 1979] and therefore there was no  
3 discussion with parents about risks."

4 So that is Professor Bridges' current  
5 recollection. If we go to PRSE0002268, you will see  
6 these are the minutes of a meeting of Haemophilia  
7 Centre Directors in January 1977. If we just go  
8 a little further down the list of attendees, we can  
9 see that Dr Bridges was there, representing Royal  
10 Victoria Hospital Belfast. And if we go over the  
11 page, we will see, five names up from the bottom --  
12 no, next page, sorry -- that Dr Mayne was also present  
13 at this meeting.

14 Then if we go to page -- probably page 10  
15 electronically, Soumik. Yes.

16 We can see the bottom of the page:

17 "Study of Hepatitis in Haemophilic Patients  
18 (Dr Craske):

19 "Dr Craske presented a written report to the  
20 meeting and outlined the findings detailed therein.  
21 371 patients receiving Hemofil had been followed up.  
22 Only 1 death was possibly attributable to Hepatitis B.  
23 Dr Craske suggested a special study of patients with  
24 factor VIII antibodies who may receive large doses of  
25 concentrates. Dr Craske said he would like to

136

1 continue with his study over the next two years.  
 2 'This continued study would include a follow up of  
 3 patients who had had Hemofil associated hepatitis to  
 4 study the incidence of chronic sequelae, and  
 5 a comparison of jaundice associated with NHS  
 6 Factor VIII and commercial products'."

7 Then there's a discussion that then continues  
 8 about difficulties of identifying causal agents and  
 9 distinguishing between hepatitis B and non-B  
 10 hepatitis.

11 So we can see, whatever Professor Bridges'  
 12 recollection now, and obviously he is being asked  
 13 about events a number of years following his  
 14 retirement, this is just one example of a meeting at  
 15 which he was present at which there was an active  
 16 discussion about the instance of hepatitis as a result  
 17 of concentrate usage.

18 Turning then to Dr Mayne and Professor Nelson,  
 19 indeed in their attendance at meetings, I'm going to  
 20 spend a little time, sir, going through the various  
 21 meetings that occurred throughout the 1970s to pick up  
 22 on various discussions about hepatitis to see what one  
 23 could realistically and reasonably expect those  
 24 clinicians working at the Belfast haemophilia centre  
 25 to have known and understood.

137

1 Then there's a reference to Dr Maycock  
 2 explaining that donor blood would in due course be  
 3 screened for Australia antigen but in the meantime the  
 4 possibility of infection remained.

5 So there's one early discussion which Dr Mayne  
 6 would have been party to, early 1971, picking up on  
 7 the risks in relation to hepatitis B.

8 We can see if we look at just some bits and  
 9 pieces of correspondence, again issues related to  
 10 hepatitis B being raised in relation to Belfast  
 11 patients. So if we go to BHCT0000768, this is  
 12 a letter from Dr Mayne to the matron at the Royal  
 13 Belfast Hospital for Sick Children. It's dated  
 14 12 January 1973 and it's in respect of a particular  
 15 patient. And we see from the first paragraph it is  
 16 someone who commenced nursing studies during  
 17 August/September 1972 at the Children's Hospital:

18 "You may remember that he developed jaundice  
 19 shortly after commencing his preliminary training.  
 20 This proved to be due to the Australia antigen he  
 21 probably became infected during the time Intravenous  
 22 Factor VIII concentrate was given to him in May 1972,  
 23 to cover his dental extractions. The hepatitis was of  
 24 a mild nature but the liver enzymes remained abnormal  
 25 for many months. This in itself was not alarming, but

139

1 We can start with HCDO0001014.

2 So this takes us all the way back to April of  
 3 1971 and we can see Dr Mayne in attendance. She's the  
 4 fourth person there listed. It's a meeting of the  
 5 Haemophilia Centre Directors held in Oxford.

6 If we go over the page, we can see halfway down  
 7 the page Dr Biggs is giving a short summary of  
 8 a report on the incidence of jaundice and inhibitors  
 9 in haemophilic and Christmas disease patients treated  
 10 during 1969, and then there are various actions set  
 11 out, including requests for directors to send figures  
 12 about Australia antigen to her.

13 If we look towards the bottom of the page  
 14 there's a proposal for publication of the report.  
 15 Then, over the top of the next page, records to be  
 16 kept and sent to Oxford, including records of those  
 17 who develop jaundice.

18 Then if we go towards the bottom of this page  
 19 there's a discussion under the heading "Hepatitis and  
 20 Australia antigen":

21 "The discussion centred on the incidence of  
 22 Australia antigen ... and antibody in the haemophilic  
 23 population and the precautions which should be taken  
 24 to prevent the spread the infection in the wards and  
 25 among laboratory staff handling blood samples."

138

1 unfortunately his serum has remained positive for the  
 2 [Australia] antigen, which means that he is  
 3 a potential hazard as a source of infection to other  
 4 people."

5 We see from the next paragraph Professor Nelson  
 6 and Dr Mayne are recorded as interviewing him and  
 7 advising him it would be inadvisable to continue  
 8 nursing because of the risk of him infecting seriously  
 9 ill or immuno-suppressed patients.

10 So there's hepatitis B as a result of  
 11 Factor VIII concentrates in May of 1972 being  
 12 considered by Dr Mayne and Professor Nelson.

13 There's a further letter at BHCT0000757. This  
 14 is 27 March 1975. If we to the next page -- sorry,  
 15 the document is in reverse order again.

16 So we can see the date, 27 March 1975, and it's  
 17 a letter from Dr Mayne to -- it's probably the GP:

18 "The above patient, who suffers from severe  
 19 haemophilia, whose blood contains Australia antigen  
 20 and who has an inhibitor to Factor VIII, was admitted  
 21 to the Haematology Unit on 8th February 1975 ..."

22 And reference there to a bleed.

23 And then in the next paragraph:

24 "During this admission, his liver function was  
 25 assessed to try and discover the damage being caused

140

1 by the patient's infective hepatitis."  
 2 Then the liver results are there set out. I'm  
 3 not going to go to the detail of them but we can see  
 4 there, again, hepatitis B and its effect upon liver  
 5 function in the active contemplation of Dr Mayne.  
 6 If we then look at various other UKHCDO  
 7 discussions in the course of the 1970s, we start with  
 8 HCDO0001015. We can see the minutes of Haemophilia  
 9 Centre Directors meeting 27 October 1972. The list of  
 10 attendees, we can see the line currently at the bottom  
 11 of the screen includes Professor Nelson.  
 12 If we go over the page we can see in the bottom  
 13 half of the page there's further discussion about  
 14 Dr Biggs' survey and the collation of data about the  
 15 incidence of jaundice. Then if we go two pages  
 16 further on, we see a discussion about -- report on the  
 17 progress with a survey of Australia antigen in house  
 18 contacts and relatives of haemophiliacs. So that's  
 19 a particular study being undertaken by Dr Ingram.  
 20 There is also a reference here -- I don't know  
 21 if I've got a note of it -- about laboratory  
 22 precautions to be taken to protect staff. I'll come  
 23 back to that if I can find it. I think it's in the  
 24 course of this meeting that it's discussed. If not,  
 25 it may be in one of the later ones.

1 absence were received from Professor Nelson, but  
 2 presumably the minutes would have been circulated at  
 3 some stage. Albeit I should in fairness -- if we go  
 4 to the very top of the page -- point out you see the  
 5 words "Revised July 1975" at the top of the page, and  
 6 there is some evidence to suggest that minutes were  
 7 frequently -- sorry, not infrequently sent out some  
 8 months after the meeting.  
 9 So this may not have come to Professor Nelson's  
 10 or Dr Mayne's attention speedily but you may wish to  
 11 consider whether you infer that the minutes would have  
 12 come to their attention at some point.  
 13 If we go to page 4, bottom half of the page  
 14 sees Dr Biggs presenting results now for 1973 in the  
 15 study of jaundice. And again, top of the next page,  
 16 Dr Biggs urging directors to make returns of the data.  
 17 Then we see this: "Report on Jaundice following  
 18 treatment with commercial Factor VIII", and there's  
 19 a report by Dr Craske and this is of the Bournemouth  
 20 outbreak:  
 21 "Dr J Craske of the Public Health Laboratory,  
 22 Poole General Hospital, made a report on an epidemic  
 23 of Hepatitis A and B in the haemophilic patients in  
 24 Bournemouth who had received one particular batch of  
 25 commercial factor VIII."

1 So that's -- again, we see hepatitis  
 2 essentially is an issue on the agenda at almost every  
 3 UKHCDO meeting in the course of the 1970s. So that's  
 4 1972. We can go next to January 1974. That's  
 5 CBLA0000187.  
 6 So we looked at this meeting this morning for  
 7 different purposes. It's the joint meeting of  
 8 Haemophilia Centre Directors and Blood Transfusion  
 9 Directors, 31 January 1974.  
 10 If we go over the page we can see the second  
 11 name listed is Dr Mayne, there recorded as  
 12 representing Professor Nelson, Belfast Haemophilia  
 13 Centre. And we can see again, if we look at the next  
 14 page, further discussion, top half of the page, about  
 15 the collection of data in relation to jaundice, and  
 16 Dr Biggs urging directors to return that data to  
 17 Oxford. And in the second half of the page is  
 18 a report on the progress of the survey of Australia  
 19 antigen in the household contacts of haemophiliacs.  
 20 We can then pick the UKHCDO meeting up towards  
 21 the end of 1974, at HCDO0001017. Sorry, HCDO0001017.  
 22 So this is the meeting of Haemophilia Centre  
 23 Directors in Oxford on 1 November 1974. Now it's  
 24 right to note that nobody from Belfast was in  
 25 attendance physically at that meeting. Apologies for

1 Then there's a reference to some patients  
 2 having hepatitis A, some hepatitis B. Then the next  
 3 paragraph says:  
 4 "Dr Rizza said that since January 1974 there  
 5 had been 11 episodes of hepatitis in Oxford patients,  
 6 9 of these patients had received commercial  
 7 concentrates but all of them also had NHS concentrate  
 8 and it was not easy to identify the material which had  
 9 caused the jaundice. Neither was it easy to determine  
 10 the incubation periods."  
 11 Then there's a discussion about the problems  
 12 arising from the use of therapeutic materials which  
 13 might be contaminated with various hepatitis viruses.  
 14 And I'm not going to go through all of it, but if we  
 15 go over the page we can see the discussion continuing,  
 16 and about ten lines down from the top we see Dr Biggs  
 17 saying:  
 18 "... it was not yet proved that the commercial  
 19 factor VIII was much more dangerous from the point of  
 20 view of causing hepatitis than other preparations and  
 21 that she hoped that this material would not get  
 22 an unnecessarily bad name. It was in fact clinically  
 23 invaluable while the NHS supply was so limited.  
 24 Dr Craske agreed with this but said that he felt that  
 25 a wholly NHS concentrate was likely to be safer when

1 that was available."  
 2 And then there's reference to Dr Craske  
 3 undertaking to draw up a plan to study the incidence  
 4 of various types of hepatitis at different centres.  
 5 In fact, I found the reference to the  
 6 laboratory staff in this document.  
 7 So there's a discussion at the bottom of the  
 8 page about the survey of Australia antigen in  
 9 household contacts of haemophilic patients.  
 10 If we go to the next page, picking it up four  
 11 lines down we see a reference to:  
 12 "Dr Waiter [that's the DHSS official attending  
 13 the meeting] said that the DHSS felt that in  
 14 laboratories specimens that were likely to be antigen  
 15 positive should be identified and staff made aware of  
 16 the risks. This topic had been raised by Professor  
 17 Nelson who was unable to be present at the meeting."  
 18 So it was a particular issue that  
 19 Professor Nelson from Belfast had raised in relation  
 20 to the risk of staff becoming infected with  
 21 hepatitis B.  
 22 If we then go to OXUH0003735, we can see these  
 23 are the minutes of a meeting of Haemophilia Centre  
 24 Directors on 18 September 1975, and if we look at the  
 25 list of attendees, if we go a little further down, we

145

1 then continues.  
 2 If we go to page 9, we then see half way down  
 3 the page a heading, "The proposed pilot study of  
 4 hepatitis in haemophilic patients":  
 5 "Dr Craske said that he hoped to continue his  
 6 study of hepatitis in patients who had received  
 7 Hemofil."  
 8 Just pausing there. Of course, as we've seen,  
 9 Hemofil was a main product in use in Belfast, so one  
 10 might expect that issues about hepatitis in patients  
 11 receiving Hemofil would be a particular interest to  
 12 the Belfast clinicians.  
 13 There's reference then to Dr Kirk introducing  
 14 a paper on a proposal to study the incidence of  
 15 hepatitis in haemophilia patients, and we see details  
 16 there set out. It's based at Treloars, Newcastle and  
 17 Oxford.  
 18 Then over the page, three lines down it says:  
 19 "There was some discussion about the collection  
 20 of samples for LFT and virus testing. It was felt it  
 21 was important to arrange for as many tests as possible  
 22 but it was also felt that frequent testing of  
 23 patients, particularly those on home therapy, could be  
 24 difficult. Therapeutic material should be saved for  
 25 virus testing in case new types of test were

147

1 see Dr Bridges present, representing Belfast.  
 2 If we then go to page 4, we see the heading  
 3 there, "Progress of the Directors study of Jaundice  
 4 and Factor VIII Antibodies". There's presentation of  
 5 a paper by Dr Biggs looking at statistics from 1969 to  
 6 1974, and then the next paragraph refers to there  
 7 being a full discussion about the incidence of  
 8 hepatitis and the problem of anicteric cases:  
 9 "Professor Stewart thought that the cases of  
 10 hepatitis should be more precisely defined according  
 11 to the criteria on which the diagnosis was made. It  
 12 was felt that future statistics should include LFT  
 13 [Liver Function Test] results ... though others felt  
 14 that LFT results were often difficult to interpret ...  
 15 and not all Centres carry out routine LFTs."  
 16 Then if we go just a few lines further down we  
 17 can see, six lines up from the bottom of the page,  
 18 a discussion about pool sizes. The influence on the  
 19 pool size of material used for fractionation was  
 20 discussed. Professor Ingram said that NHS Factor VIII  
 21 was derived from pools of 500 to 750 donations whereas  
 22 the commercial Factor VIII was often derived from  
 23 pools of 2,000 to 6,000 litres of plasma and that the  
 24 probability of including an infected donation was  
 25 greater with commercial Factor VIII. The discussion

146

1 developed."  
 2 So that's the 1975 discussions.  
 3 If we then just look at CBLA0000312. So this  
 4 is the paper that was described as being circulated at  
 5 that meeting. So again, a paper that would have come  
 6 to the attention of Belfast clinicians on this  
 7 occasion through Dr Bridges' attendance at the  
 8 meeting. Then I won't go through the detail of it,  
 9 but we can see it's the protocol for the prospective  
 10 study, and it says this in the introduction:  
 11 "The transfusion of blood or its derivatives  
 12 has been linked with the transmission of viral  
 13 hepatitis for many years."  
 14 And then it talks about the discovery of the  
 15 Australia antigen and matters set out in relation to  
 16 that. Then it says, just above paragraphs (a), (b)  
 17 and (c):  
 18 "This failure to prevent post transmission  
 19 hepatitis may be explained by the following  
 20 hypotheses:  
 21 "(a) That correct methods of detecting  
 22 [Australia antigen] are still not sensitive enough.  
 23 "(b) That other known viral agents are  
 24 responsible ..."  
 25 Then:

148

1 (c) That other, as yet unknown viruses, cause  
 2 a significant amount of post transfusion hepatitis  
 3 which is supported by the recent work of Feinstone et  
 4 al."  
 5 **SIR BRIAN LANGSTAFF:** That publication was in the NEJM,  
 6 New England Journal of Medicine, I think, which, from  
 7 all the evidence we've heard, is one of the most  
 8 commonly read reports by clinicians other than the BMJ  
 9 and The Lancet.  
 10 **MS RICHARDS:** Yes. It was in the New England Journal of  
 11 Medicine published in 1975.  
 12 **SIR BRIAN LANGSTAFF:** Yes.  
 13 **MS RICHARDS:** As we'll see, there's also a reference in  
 14 this paper to the Prince publication in a perhaps  
 15 lesser well known journal, Transfusion and Immunology  
 16 in 1975, but summarised and referred to in this  
 17 document.  
 18 We'll see that the next paragraph then talks  
 19 about the particular issue of -- risk issues  
 20 associated with large pool factor concentrates.  
 21 Picking it up halfway down that paragraph, it says:  
 22 "However, treatment with factor VIII  
 23 concentrates does expose the patient to a much larger  
 24 risk of contracting transfusion hepatitis since the  
 25 fractionated product is processed from donor pools.

149

1 details about what the study will entail, but the  
 2 evidence clearly shows that this was circulated at  
 3 that September 1975 meeting.  
 4 If we then go to 1977.  
 5 PRSE0001002. Sir, these are the minutes of the  
 6 meeting of the Haemophilia Centre Directors,  
 7 24 October 1977. If we go to page 3 we will see from  
 8 the list of attendees, bottom half of the page,  
 9 left-hand column, that we have Professor Nelson from  
 10 Belfast. The apologies tell us that Dr Mayne was  
 11 invited but gave her apologies for her absence.  
 12 And then there's if we go to -- sorry, Soumik,  
 13 it's page 7, I think.  
 14 Bottom of the page, "Hepatitis Study", we see  
 15 reference there to Dr Kirk presenting a report on  
 16 behalf of Dr Craske. So this is now a report in  
 17 relation to the progress of the study.  
 18 And if we go two pages -- I think, Soumik, it's  
 19 going to be electronic page 19. It's page 10 using  
 20 the actual page numbers but we appear to have lots of  
 21 blank pages in. That's it.  
 22 Under the heading, halfway down the page,  
 23 "Hepatitis Working Party", we can see Dr Craske  
 24 presenting -- sorry, Dr Kirk presenting a report on  
 25 behalf of Dr Craske, a suggestion about information

151

1 Furthermore, commercial factor VIII concentrates are  
 2 made from very large pools of some 2,000-6,000 litres  
 3 of plasma from paid donors. An outbreak of both  
 4 non-'B' hepatitis and 'B' hepatitis associated with  
 5 concentrates of this type has recently been reported  
 6 by Craske et al."  
 7 That's a reference to the 1975 publication in  
 8 The Lancet of Dr Craske's write-up of his observations  
 9 in relation to Bournemouth, and it's the article  
 10 entitled "An outbreak of hepatitis associated with  
 11 intravenous injection of Factor VIII concentrate".  
 12 So the risk there, both in terms of hepatitis B  
 13 and non-B hepatitis, also known as non-A, non-B  
 14 hepatitis, clearly being articulated here.  
 15 Then the next paragraph says:  
 16 "It has been suggested by Prince ..."  
 17 And that's the 1975 publication in Transfusion  
 18 and Immunology.  
 19 "... that recipients of all commercial blood  
 20 have a ten-fold higher risk of developing non-'B' post  
 21 transfusion hepatitis [so non-A, non-B] than  
 22 recipients of all volunteer donor blood."  
 23 And that's then the reason that's given for  
 24 conducting this prospective study of hepatitis.  
 25 The rest of the paper then goes on to provide

150

1 being collected regarding patients who are hepatitis B  
 2 carriers and some directors expressing concern about  
 3 that.  
 4 Then the next paragraph:  
 5 "There then followed a discussion of the  
 6 advisability of liver biopsy in haemophiliacs. The  
 7 consensus was that each case must be considered  
 8 individually and in particular that the Hepatitis  
 9 Working Party should be informed of any such  
 10 patients."  
 11 Of course, the very fact of there being even  
 12 a discussion of liver biopsies in haemophiliacs would  
 13 tend to suggest that the risks of hepatitis and the  
 14 need to examine whether and to what extent there were  
 15 chronic consequences from hepatitis was something that  
 16 was taken seriously and regarded as an important issue  
 17 for discussion.  
 18 So that's the 1977 meeting. It's right to note  
 19 that in the course of 1977 and 1978 the Hepatitis  
 20 Working Party began to meet on a very regular basis.  
 21 Now, nobody from Belfast was a member of the Hepatitis  
 22 Working Party but, again, if we trace through each of  
 23 the sets of minutes, we see regular reports being made  
 24 by someone on behalf of the Hepatitis Working Party,  
 25 usually Dr Craske -- not always, as we see here it was

152

1 Dr Kirk -- updating Haemophilia Centre Directors on  
2 the work of the Hepatitis Working Party.

3 We can see if we go to CBLA0000681\_009, it  
4 seems likely from various documents, including the  
5 date, that this was the report that was being  
6 discussed in that 1977 meeting. It's described as  
7 "Haemophilia Directors Hepatitis Working Party,  
8 Hepatitis Associated Commercial Factor VIII 1976", but  
9 the report's actually dated 22 September 1977, and  
10 you'll see it's referred to as appendix C, and it was  
11 appendix C that is referred to in the minutes.

12 We will see again it updates the Haemophilia  
13 Centre Directors, so that would include the Belfast  
14 representatives, about the progress of the study of  
15 Hemofil, and we can see from the very opening  
16 paragraph:

17 "As a continuation of the study of Hemofil  
18 begun in 1974, it was decided to study the incidence  
19 of hepatitis after transfusions of Kryobulin in 1976  
20 and to compare this with that due to Hemofil."

21 So the two commercial products in use in  
22 Belfast are here the focus of this study.

23 If we look at the results:

24 "Returns were received from 24 Haemophilia  
25 Centres."

153

1 continue these studies with the object of answering  
2 the following questions."

3 The first is about the effects of the  
4 hepatitis B screening but the second is the number of  
5 types and incidence of non-B hepatitis. And then the  
6 third is the incidence of sequelae after acute  
7 hepatitis, so looking at chronicity, effectively, and  
8 chronic effects.

9 Then detail is given of further projects  
10 proposed.

11 So that's a paper which the documents would  
12 tend to suggest would have been shared, was shared  
13 with the Haemophilia Centre Directors, at least those  
14 attending that meeting which, in relation to that  
15 meeting, included Professor Nelson.

16 Sir, I've still got a number of further  
17 documents to look at in relation to issues of  
18 hepatitis and knowledge of risk, so perhaps this is  
19 a useful moment to take a break.

20 **SIR BRIAN LANGSTAFF:** Yes, let's do that and come back at  
21 quarter to 4.

22 **(3.14 pm)**

**(A short break)**

24 **(3.45 pm)**

25 **MS RICHARDS:** Picking up the picture now in 1978, sir,

155

1 I'm afraid we've no way of knowing if that  
2 included Belfast.

3 "There was epidemiological evidence that 2/6  
4 batches of Hemofil and 2/16 batches of Kryobulin  
5 contained hepatitis B virus. Similarly 4/6 batches of  
6 Hemofil and [I think that's 3/17 but it could be 5/17]  
7 batches of Kryobulin were associated with cases of  
8 Non-B hepatitis."

9 Then it refers to information about patients.  
10 Under the heading "Hepatitis B" a little further down  
11 the page it refers to two cases of hepatitis B  
12 occurring in patients previously known to have had  
13 transfusions of Hemofil.

14 Then over the page we see the heading "Non-B  
15 hepatitis", so non-A, non-B:

16 "Cases of Hemofil associated Non-B hepatitis  
17 have continued to occur, all in patients receiving  
18 Hemofil for the first time."

19 And that is then discussed further.

20 Then there's reference, you will see the  
21 heading further down, "Multiple attacks of hepatitis",  
22 so reference to patients having more than one attack  
23 of hepatitis. Then if we go to the next page, under  
24 the heading "Conclusions", it's said:

25 "These results indicate it is essential to

154

1 Dr Mayne was present at the Haemophilia Centre  
2 Directors meeting of 13 November 1978. I'm not going  
3 to put it up on screen because the minutes only tell  
4 us that Dr Craske presented a Hepatitis Working Party  
5 report but we don't have the report itself. But we  
6 can see that hepatitis was still very much under  
7 active consideration and on the Haemophilia Centre  
8 Directors' agenda.

9 If we then turn to CBLA0001028, please. These  
10 are the minutes of the Haemophilia Centre Directors  
11 meeting in November of 1979. Now, there is no-one  
12 physically in attendance from Belfast, Dr Mayne sent  
13 her apologies, but again you may wish to consider,  
14 sir, inferring the minutes would have been circulated  
15 and considered in due course.

16 If we go in these minutes to page 18, we can  
17 see there the heading "Hepatitis Working Party". We  
18 see Dr Craske presenting his report. There's  
19 reference to some corrections being required to  
20 a table and that any directors who wished to have the  
21 corrected version of the table should write to him.

22 Then:

23 "Dr Craske said that the Working Party had  
24 drawn up a new form, Form C3, which they would like  
25 Directors to complete for patients who had chronic

156

1 hepatitis. The Working Party felt that it was  
2 important for the incidence of chronic hepatitis in  
3 haemophilic patients to be assessed. There was much  
4 discussion regarding the incidence of chronic  
5 hepatitis in haemophilic patients, the possible value  
6 of liver biopsies and the type of information which  
7 Directors would be willing to give to the Working  
8 Party."

9 Then there's a discussion further down the page  
10 about attack rates. Then, top of the next page,  
11 picking it up four lines down:

12 "It was agreed that the Working Party would  
13 produce a new two-part form on which Haemophilia  
14 Centre Directors could report cases of chronic  
15 hepatitis."

16 So again we see the question of the incidence,  
17 nature and extent of chronic hepatitis being one of  
18 the central issues under consideration by the  
19 Haemophilia Centre Directors.

20 If we then turn to HCDO0000406, this is the  
21 Reference Centre Director meeting 22 September 1980.  
22 If we go a little further down, we can see it says in  
23 paragraph 1:

24 "Professor Bloom welcomed Dr Elizabeth Mayne  
25 who was attending a Reference Centre Directors meeting

157

1 last paragraph:

2 "Dr Craske said that there had been a poor  
3 response from Directors to the request for information  
4 about patients thought to have developed chronic  
5 hepatitis and he said that he proposed to ask the  
6 Directors at the annual meeting in Glasgow to send in  
7 as soon as possible information about all patients who  
8 had shown abnormal LFTs for six months or more.  
9 Dr Craske said he was awaiting the results of the  
10 biopsy studies which were currently being undertaken  
11 in Sheffield and at the Royal Free Hospital."

12 This is obviously two years further on from the  
13 publication of Professor Preston's first set of biopsy  
14 studies in 1978.

15 "There were also further studies underway in  
16 Oxford particularly with regard to patients who had  
17 received only Oxford Factor VIII concentrate.  
18 Manchester ... setting up similar studies. Dr Kernoff  
19 said that the biopsy studies in Sheffield and the  
20 Royal Free were getting underway ... About forty  
21 patients ... studied so far. Professor Sheuer would  
22 give a preliminary report on the findings at the  
23 Glasgow meeting."

24 Of course, sir, we know the Glasgow symposium  
25 took place in September 1980. We've looked at that

159

1 for the first time as Director for the Northern  
2 Ireland Haemophilia Reference Centre."

3 So this is her first attendance as a Reference  
4 Centre Director.

5 If we then go to page 5 we can see that the  
6 Reference Centre Directors discuss reports from the  
7 Working Party chairman, and they start with the  
8 Hepatitis Working Party.

9 "Dr Craske presented tables outlining the  
10 results which the Working Party had obtained over the  
11 last year."

12 And then there's a discussion about pool sizes,  
13 relative pool sizes at Elstree and Oxford, and he  
14 thought that was relevant:

15 "The plasma pools obtained from each batch of  
16 Elstree material was made from approximately 3,500  
17 donors whereas the Oxford material was made from  
18 plasma pools from approximately 500 donors."

19 Dr Craske refers to a proposal to apply to the  
20 Department of Health for a grant to undertake  
21 a prospective study in Oxford regarding mildly  
22 affected patients and patients who were receiving  
23 concentrates.

24 Then if we go a little further down, so we see  
25 the rest of the page, we can see four lines into the

158

1 with other witnesses.

2 Then reference is made by -- sorry:

3 "Dr Preston gave some details of the results  
4 ... found in Sheffield. Dr Craske said in America it  
5 was found that approximately 5 per cent of their donor  
6 population were carriers of Non-A and Non-B virus. No  
7 sensitive test to detect this virus was likely to be  
8 available for a year or two. There were therefore  
9 problems in interpreting the Non-A and Non-B  
10 hepatitis ... The patients who were thought to have  
11 suffered from Non-A and Non-B hepatitis had very mild  
12 clinical symptoms."

13 That's presumably in the acute stage, although  
14 it's not entirely clear.

15 So that's the discussion of Dr Mayne's first  
16 Reference Centre Directors' meeting in relation to  
17 hepatitis.

18 Then if we just pick it up, last of all in  
19 terms of the sequence of UKHCDO meetings, in 1981, if  
20 we go to LOTH0000012\_122, this is a meeting of the  
21 Reference Centre Directors, September 1981. Dr Mayne  
22 was present.

23 If we go to page 7, under the heading  
24 "Hepatitis Working Party", bottom of the page, we can  
25 see:

160

1 "Dr Craske presented the results of the Working  
2 Party's activities during the last three years. The  
3 cases of hepatitis reported by Haemophilia Centre  
4 Directors, had been mild in most instances and no  
5 acute case in recent years had resulted in death."

6 So that's dealing with acute cases. Then he  
7 goes on to consider chronic:

8 "Several questions were still to be answered  
9 regarding hepatitis in haemophiliacs. One was whether  
10 acute attacks of hepatitis in haemophiliacs would  
11 result in chronic liver problems in a few years'  
12 time."

13 Then there's reference to the studies in  
14 relation to Kryobulin and Hemofil. And then over the  
15 page, I'm not going to go through it detail, but  
16 there's a discussion about the so-called reduced  
17 hepatitis or hepatitis-free products that then takes  
18 place and is recorded on that page.

19 Then finally, for present purposes,  
20 CBLA0001466. This is a report for the Haemophilia  
21 Centre Directors meeting on 9 October 1981. It's  
22 Dr Craske's report. If we go over the page, it's  
23 a report of the Hepatitis Working Party, and if we  
24 just look by way of example -- so there's reference to  
25 the studies in the first section under the heading

161

1 through some of the materials and discussions being  
2 considered by the Hepatitis Working Party.

3 In fact, there was one report I should also  
4 have gone to which I omitted. It's a report from 1979  
5 of the Hepatitis Working Party, HCDO0000135\_023.

6 So we'll see in the first paragraph it refers  
7 to the working party having held three meetings during  
8 the year:

9 "Most of the business consisted of the  
10 organisation of projects related to the hepatitis  
11 surveillance programme and to the study of chronic  
12 liver disease in patients at the Oxford Haemophilia  
13 Centre."

14 If we go to page 5, under the heading  
15 "Mortality":

16 "No further fatalities directly due to acute  
17 hepatitis have been reported. One patient had acute  
18 [non-A, non-B] hepatitis followed by persistent raised  
19 enzyme levels in 1978. He died of a retroperitoneal  
20 haemorrhage, post mortem was refused but it is  
21 possible that his hepatitis indirectly contributed to  
22 his death.

23 "A further patient at Oxford who died of causes  
24 unrelated to liver disease was found on post mortem to  
25 have portal cirrhosis ..."

163

1 "Hepatitis Surveillance" and then under the heading  
2 "Complications":

3 "The question of the significance of chronic  
4 hepatitis observed by several groups of workers in  
5 liver biopsies of patients with chronically elevated  
6 transaminases is still unanswered. Current  
7 investigations are attempting to relate the results in  
8 different groups of patients to their transfusion  
9 history, and there is strong evidence that different  
10 types of non-A, non-B hepatitis are related to  
11 different products ... Most patients in this group are  
12 still entirely symptomless. The natural history of  
13 the disease in non-haemophiliacs is still not known,  
14 though there is some evidence to suggest that some  
15 patients with liver biopsy appearances of chronic  
16 active hepatitis have a better prognosis than patients  
17 with similar histology on liver biopsy whose liver  
18 disease is considered to be of non-viral origin.  
19 There have been no further deaths directly or  
20 indirectly attributed to liver disease in the past  
21 year."

22 Then there's a discussion of the incidence of  
23 hepatitis due to commercial versus NHS associated  
24 hepatitis.

25 That's a bit of a whistle-stop tour, sir,

162

1 It's recorded there hepatitis B antigen  
2 negative:

3 "We will be interested in any further cases  
4 where specimens of post mortem liver can be obtained  
5 from haemophiliacs, to collect further evidence of the  
6 prevalence of chronic liver disease. The preliminary  
7 results of the patients at Oxford so far studied for  
8 evidence of chronic liver disease are given in  
9 Appendix I ... 70 out of 174 patients ... had  
10 persistent transaminitis but only [that's the word  
11 used] 20 of these so far have been found to have  
12 clinical evidence suggestive of chronic liver  
13 disease."

14 If we omit the word "only", we can see 20 out  
15 of 174 patients --

16 **SIR BRIAN LANGSTAFF:** That's 30 per cent.

17 **MS RICHARDS:** Yes, found to have clinical evidence  
18 suggestive of chronic liver disease.

19 There are more detailed discussions about  
20 various studies and non-A, non-B hepatitis in this  
21 document, which, again, were circulated for the  
22 purposes of I think the November 1979 meeting of  
23 Haemophilia Centre Directors.

24 We can see then the consideration being given  
25 at the Haemophilia Centre Directors' annual meetings

164

1 to issues relating to hepatitis. If we turn to  
2 material authored by Dr Mayne herself and we start  
3 with her HIV litigation report, CBLA0000072\_024, and  
4 if we go to page 14, this is a section of Dr Mayne's  
5 litigation report headed "Hepatitis and/or other viral  
6 infections". It's detailed, and I won't go through  
7 all of it but, if we can pick it up at the bottom of  
8 this page, she says:

9 "Transfusion associated hepatitis was  
10 recognised with increasing frequency following the  
11 introduction of plasma and plasma derived products for  
12 the treatment of Haemophilia."

13 Then I'll skip over the next sentence which  
14 relates to a paragraph in the Statement of Claim:

15 "The Haemophilia physicians of the United  
16 Kingdom addressed the problem constantly during the  
17 early years of treatment, from 1967 onwards and they  
18 continue to do so today."

19 If we go to the next page, she then sets out  
20 certain thoughts as regards the risk of hepatitis from  
21 cryoprecipitate, and says, picking it up four lines  
22 down:

23 "Previously the latter [that's cryoprecipitate]  
24 in paragraph 16(b) [again that's a reference to the  
25 Statement of Claim] is stated to have far smaller

165

1 that's the Bournemouth outbreak, I think:

2 "... caused by 3 out of 4 batches of American  
3 origin Commercial Factor VIII concentrate ... 4 cases  
4 of Hepatitis B and 7 cases of short incubation or  
5 non A non B hepatitis. Two patients developed both  
6 forms of the disease. A total of 9 out of 18 patients  
7 became ill -- a 50 per cent attack rate. It was  
8 concluded that commercial concentrate should be  
9 reserved for the treatment of life-threatening bleeds  
10 or for covering major surgery."

11 So Dr Mayne is here setting out these various  
12 reports. There's no suggestion in this document that  
13 Dr Mayne is asserting that this is material that would  
14 be unfamiliar to haemophilia clinicians. She doesn't  
15 provide her own observation on the Craske  
16 recommendation of limiting commercial concentrate to  
17 major surgery or life-threatening bleeds.

18 If we go over the page, in the first main  
19 paragraph she says:

20 "The possible significance of asymptomatic  
21 hepatitis became apparent by 1978 when structural  
22 abnormalities of the liver were described in  
23 patients."

24 The reference there, at footnote 27, is to  
25 an article in the New England Journal of Medicine in

167

1 risks of viral transmission, being prepared from  
2 single or small volume of donors. Relatively speaking  
3 the statement is accurate ..."

4 So she appears to be accepting it has far  
5 smaller risks of viral transmission but then she  
6 observes:

7 "... it was the occurrence of cases of jaundice  
8 in just such treated patients that formed part of the  
9 first [UK] Survey of Hepatitis ..."

10 And then she provides further detail in  
11 relation to that.

12 Then if we go over the page, we see she refers,  
13 about five lines down in that first paragraph, to work  
14 by Mannucci in 1975 and Levine in 1977 describing:

15 "... a high prevalence of abnormal liver  
16 function tests amongst multi-transfused haemophiliacs,  
17 but the significance of their findings could not be  
18 determined at that time. The patients were clinically  
19 well."

20 There's then a discussion about hepatitis B and  
21 the introduction of donor testing in the early 1970s.

22 So if we then go on to the next page, please,  
23 and pick it up in the bottom half of the page,  
24 Dr Mayne then refers to Dr Craske's 1975 documentation  
25 of an outbreak of hepatitis in the United Kingdom, so

166

1 1978 by Spero, Lewis and others called "Asymptomatic  
2 Structural Liver Disease in Haemophilia". She says:

3 "There was histological evidence of chronic  
4 active hepatitis and cirrhosis. The findings were  
5 thought to be related to the multi-transfused nature  
6 of the patients and also the possible effects of the  
7 persistence of virus within the liver cells."

8 Et cetera.

9 Then she refers to similar histological  
10 abnormalities being described in haemophiliacs with  
11 evidence of non-A, non-B hepatitis by Aledort, 1985,  
12 and Hay, 1985, and she refers to Dr Preston's work  
13 in 1988. I'm just going to check that that's right.

14 Yes. Sir, that is an article published in  
15 1988, but of course we have also Dr Preston's 1978  
16 work.

17 Then she says in the bottom half of that page:

18 "The exposure risk for non A non B hepatitis  
19 was difficult to determine as prior to 1989 there was  
20 no marker test available for its detection. The  
21 diagnosis was established on exclusion of other  
22 infection and by abnormalities of liver function  
23 tests."

24 So she appears there to be suggesting you could  
25 still make a diagnosis of non-A, non-B hepatitis by

168

1 reference of excluding other causes and looking at  
 2 liver function test results. Then she refers to in  
 3 1984 a finding about non-A, non-B hepatitis, and says  
 4 it was "difficult to ascertain the true risk of  
 5 infection from non A non B hepatitis".

6 Then if we go over the next page, she says in  
 7 the second line:  
 8 "It would seem ... that haemophiliacs in the UK  
 9 being exposed to both home produced and commercial  
 10 Factor VIII would have a high infection rate. This  
 11 has been found to be the case ..."

12 Then she refers to the Fletcher paper, 1983.  
 13 There's then a discussion, bottom half of this  
 14 page, about the incidence of hepatitis B infection  
 15 decreasing. Then halfway through that paragraph she  
 16 says:

17 "The awareness of the long term risks of non A  
 18 non B infection evolved gradually. It is evident that  
 19 all products were implicated to some degree regardless  
 20 of plasma source."

21 Over the page she then says this:  
 22 "At all times the risk benefit ratio of  
 23 treatment versus non-treatment [so that's the choice  
 24 that's posited as opposed to treatment with  
 25 concentrates versus treatment with cryoprecipitate or

1 they were at special risk of hepatitis, also for  
 2 mildly affected patients, children and those suffering  
 3 from the von Willebrand syndrome. A policy adopted by  
 4 many and recommended by the UK Haemophilia  
 5 Directors ..."

6 And then she makes reference to some matters  
 7 which I don't think make particular sense unless we  
 8 compared them against the Statement of Claim in the  
 9 HIV litigation.

10 So you'll see there, sir, assertions that the  
 11 majority of patients were of the opinion that they  
 12 weren't put off using concentrates. The evidence from  
 13 that -- well, no evidence is given other than  
 14 a reference to one patient in the World in Action  
 15 programme.

16 You will know, sir, from the evidence you have  
 17 heard and read from patients and their families that  
 18 the thrust of that evidence is that patients were not  
 19 routinely informed of hepatitis risks posed by blood  
 20 products prior to their use and, if that's right,  
 21 weren't then given the ability to make an informed  
 22 choice. Obviously those are matters of fact that you  
 23 will have to consider and resolve.

24 There's one further document authored by  
 25 Dr Mayne before I look at what she says in her

1 lots of treatment versus modest amounts of treatment  
 2 or any other alternatives] had to be applied to  
 3 patient care."

4 Then this:  
 5 "The patients themselves became aware of the  
 6 risks of hepatitis during the mid-1970s."

7 The evidence she puts forward to that is the  
 8 World in Action documentary:

9 "In particular, after the 1975 outbreak in the  
 10 [UK] a World in Action television programme dealt with  
 11 the problem in detail. During the course of the  
 12 screening, one patient was asked if he had been 'put  
 13 off' using his Factor VIII concentrate. He replied  
 14 that he had used it again immediately he developed  
 15 a painful bleed into an elbow joint."

16 Then she asserts this:  
 17 "The majority of patients were of the same  
 18 opinion -- freedom from pain was of paramount  
 19 importance to them. Craske recommended a return to  
 20 the use of cryoprecipitate for routine treatment  
 21 [that's his 1975 Lancet article], but by that time  
 22 a majority of patients were well established in self  
 23 injection programmes. Unfortunately it was  
 24 impractical for home treatment. It was practical for  
 25 the treatment of patients not previously treated as

1 statements to the Inquiry. It's at WITN0736011. It's  
 2 not dated but it is, we understand, authored by  
 3 Dr Mayne. She says under the heading "Historical":

4 "The occurrence of jaundice after introduction  
 5 of human plasma into the body was first noted well  
 6 over 100 years ago in German shipyard workers ...  
 7 vaccinated with a human lymph-derived vaccine and  
 8 later further described during the Second World War in  
 9 British soldiers inoculated using multi-shared  
 10 syringes. In 1943, Beeson reviewed this information  
 11 and described other patients suffering what was then  
 12 called 'homologous serum jaundice'. This condition  
 13 was further reviewed by Spurling et al in 1964, who  
 14 recognised the increased risk of pooling blood plasma  
 15 for infusions into patients."

16 Then there's a short discussion of hepatitis A.  
 17 Then we see hepatitis B. She says:

18 "This form of hepatitis is the one described as  
 19 homologous serum jaundice by Beeson and it has a long  
 20 incubation period of up to six months and is termed  
 21 hepatitis B ..."

22 Then there's reference to the discovery of the  
 23 Australia antigen and the introduction of tests.

24 And we can see in the last sentence on that  
 25 page:

1 "In the early 1970s it was appreciated that the  
2 prevalence of hepatitis B was increased both in drug  
3 addicts and in prison inmates."

4 Then if we go over the page, we can see the  
5 heading "Non-A non-B Hepatitis", and it says this:

6 "In 1974, Prince et al first noted a large  
7 proportion of post-transfusion hepatitis patients did  
8 not have any evidence of the B hepatitis virus. They  
9 postulated that there could be other  
10 transfusion-transmitted hepatitis virus(es) Type C.  
11 In 1974 Alter and colleagues confirmed these findings  
12 and from then on the term 'non-A non-B hepatitis' was  
13 used."

14 **SIR BRIAN LANGSTAFF:** Just a question there on the basic  
15 facts of that. In the Nobel prize citation, Alter was  
16 one of the laureates, was he not?

17 **MS RICHARDS:** I can't remember, I'm afraid, I'm ashamed to  
18 say, sir.

19 **SIR BRIAN LANGSTAFF:** Well, I have a feeling that the  
20 citation talks about 1972 as being the first bit of  
21 research, but that can be checked.

22 **MS RICHARDS:** That can be checked, yes.

23 The Prince and Alter reports are part of the  
24 material that we've looked at on a number of  
25 occasions.

173

1 "... of its effects was not appreciated,  
2 elaborated and investigated until the mid to  
3 late 1980s."

4 Then she deals with the isolation of  
5 hepatitis C itself and its naming of such and the  
6 development of tests.

7 We can, I think, skip over what's said about  
8 hepatitis D. If we go to the next page, it says:

9 "Transfusion associated hepatitis was  
10 recognised with increasing frequency following the use  
11 of FFP and plasma derived concentrates, produced for  
12 the treatment of all types of haemophilia. The  
13 haemophilia physicians of the [UK] constantly  
14 addressed the problem from 1967 onwards, culminating  
15 in the establishment of the United Kingdom Haemophilia  
16 Directors Hepatitis Working Party. It was instituted  
17 in 1977 under the chairmanship of the virologist,  
18 Dr John Craske."

19 She then talks, in the next paragraph, in the  
20 early 1970s about hepatitis B infection giving rise to  
21 the greatest concern.

22 Then if we go into the next paragraph, we can  
23 see, picking up in the third line, there's reference  
24 to Mannucci's work in 1975. Then if we go to the next  
25 paragraph, reference to the 1979 Hepatitis Working

175

1 **SIR BRIAN LANGSTAFF:** Yes.

2 **MS RICHARDS:** And, of course, they contain expressions of  
3 view as to the potential serious nature of -- or  
4 chronic nature of non-A, non-B hepatitis.

5 Then this article or report continues:

6 "There appeared to be several types of non-A  
7 non-B hepatitis; the type which has a short incubation  
8 period ... and some which have a longer incubation  
9 period ... the clinical picture of non-A non-B  
10 hepatitis compared to hepatitis B tends to be mild.  
11 Very [infrequently] the infection is" --

12 **SIR BRIAN LANGSTAFF:** "Very frequently".

13 **MS RICHARDS:** Yes, sorry.

14 "... very frequently the infection is totally  
15 symptomless and may only be detected by blood tests of  
16 liver function. The most usual test is of a substance  
17 known as transaminase. A persistently raised  
18 transaminase known as ALT, used to be presumptive  
19 evidence of hepatitis in multi-transfused patients."

20 Then she says this:

21 "The risk that non-A non-B hepatitis could  
22 progress to chronic hepatitis was known in 1977 but  
23 the full significance ..."

24 And perhaps the word "full" in itself is of  
25 significance:

174

1 Party report. So these are, in terms of the UKHCDO,  
2 some of the materials that I've just shown you, sir,  
3 and it would appear to confirm that this was material  
4 known to and available to Dr Mayne at the time.

5 So she refers to the report of 1979 with an  
6 increase in the proportion of non-A, non-B hepatitis  
7 reported in patients with mild coagulation defects  
8 receiving concentrate for the first time. Then she  
9 refers to the Hepatitis Working Party's report for  
10 '82/'83.

11 Then, if we go over the page, she quotes from  
12 a paragraph entitled "Prospective studies of hepatitis  
13 in infrequently treated haemophiliacs". I won't read  
14 out the quote but if we go to the paragraph beginning:

15 "The report confirmed that patients remained at  
16 risk from developing non-A non-B and from hepatitis B  
17 infection, the latter despite donor selection and the  
18 patients were being infected regardless of the source  
19 of their replacement treatment."

20 There's then a discussion about hepatitis B  
21 vaccination and then she goes on to consider the  
22 impact of the AIDS epidemic. I'll be coming to look  
23 at AIDS tomorrow.

24 But if we go to the next page, the final  
25 paragraph, she says this about Northern Ireland:

176

1 "It was estimated in the Northern Ireland  
2 Haemophilia Centre that 112 patients had been exposed  
3 to the possibility of virus infections following  
4 receipt of replacement treatment."

5 She then gives the number in relation to those  
6 who developed HIV, 16, which I'll come back to  
7 tomorrow.

8 "Seventy-six of the 112 developed hepatitis,  
9 an incidence of 72 per cent. In some Centres in the  
10 United Kingdom, the incidence was as high as  
11 95 per cent. The rationale for these figures being  
12 slightly better than in other Centres in the UK was  
13 because it was a policy within the Centre that  
14 patients, as far as possible and practicable, should  
15 receive only product from one source."

16 Then she gives here her rationale for that:

17 "This was because it had become realised that  
18 using concentrate prepared from many different, large  
19 pools of plasma were likely to be more infective. The  
20 rationale was sound but the results were only  
21 partially effective."

22 So it is said there, it would appear, that the  
23 underlying treatment policy in relation to trying to  
24 use one source of product was on safety grounds, in  
25 terms of risks of viral transmission.

177

1 onwards was because of concerns about adverse effects  
2 of treatment.

3 Then in this statement, if we go to the last  
4 page, picking it up in paragraph 13, second line, she  
5 says:

6 "... I had observed these abnormal liver  
7 function tests for so long without there being any  
8 apparent clinical ill effects, that I think I could  
9 have been lulled into a false sense of security. I am  
10 not at all sure."

11 That would appear to suggest, in any event,  
12 that Dr Mayne was observing over a prolonged period of  
13 time in her patients abnormal liver function test  
14 results.

15 **SIR BRIAN LANGSTAFF:** But this is talking about 1995.

16 **MS RICHARDS:** It is, but I think she is probably making  
17 a more general observation. But yes, absolutely. She  
18 is there suggesting that in 1995 the significance of  
19 hepatitis C, as it was then known and had been known  
20 for several years, was not fully appreciated by her.

21 **SIR BRIAN LANGSTAFF:** She is responding to a comment that  
22 she didn't spell out some of the serious consequences  
23 to the witness, and she's saying, "I didn't do that  
24 because I didn't realise there were any."

25 **MS RICHARDS:** Yes.

179

1 Obviously, it will be a matter for you, sir, to  
2 consider all the material and consider whether you  
3 accept that that was the reason.

4 I want to come, finally, then, in relation to  
5 knowledge of risk of hepatitis -- we'll look in more  
6 detail tomorrow at some of the information that was  
7 then given and the way in which testing was undertaken  
8 and so on, but on knowledge of risk to what Dr Mayne  
9 says in her witness statements.

10 So if we can start with WITN0736007, this is  
11 a statement made in response to made by Dr Mayne in  
12 response to the evidence of patients or relatives who  
13 had given evidence to the Inquiry. If we just look at  
14 a couple of passages, bottom of this page, Dr Mayne  
15 says this in paragraph 2:

16 "During the 1970s, both [that's the two  
17 patients she's talking about] were commenced on Home  
18 Treatment. In accordance with the Centre's practice,  
19 at review appointments bloods were taken to test for  
20 anaemia and the presence of an inhibitor. Liver  
21 function tests were also performed because of my  
22 apprehension about the adverse effect of prolonged IV  
23 treatment."

24 So she says there in terms: the reason for  
25 undertaking liver function tests from the 1970s

178

1 **SIR BRIAN LANGSTAFF:** I'm --

2 **MS RICHARDS:** Paraphrasing but, yes.

3 **SIR BRIAN LANGSTAFF:** -- paraphrasing.

4 **MS RICHARDS:** Yes. I'll deal with the question of what  
5 information was and wasn't given to patients in  
6 a little more detail tomorrow, but you are absolutely  
7 right, sir, that is in effect what's being said here.  
8 But we also see apparent observation of abnormal liver  
9 function tests over prolonged periods of time.

10 Then if we go to WITN0736001, this again is  
11 a statement in response to criticisms by -- or  
12 evidence given by former patients. And if we go,  
13 please, to page 11, and we look at paragraph 5.2, this  
14 is looking at an earlier period, 1976, and she says in  
15 the second sentence:

16 "At that time, treatment was considered to be  
17 both effective and safe."

18 Again, the consistency of that statement with  
19 everything else that we've looked at about hepatitis  
20 risks will be a matter for you to consider, sir.

21 There were few facts available --

22 **SIR BRIAN LANGSTAFF:** That was the same time as she was  
23 saying that those people who had watched the programme  
24 in 1975 recalling the risks, they knew all about the  
25 risks.

180

1 **MS RICHARDS:** Yes, and were then taking an informed  
2 decision to carry on with their treatment. Yes, that  
3 is what she said in the report that we looked at.  
4 **SIR BRIAN LANGSTAFF:** Yes. Somehow I have to reconcile  
5 those two rather different views.  
6 **MS RICHARDS:** Yes, that is a task for you, sir.  
7 Then we see in the third line:  
8 "There were few facts available regarding viral  
9 infections at this time, apart from the historical and  
10 rare transmission of Hepatitis B."  
11 Then she refers to abnormal liver function  
12 tests being under constant consideration by the  
13 Hepatitis Working Party. Hepatitis C not a recognised  
14 entity at this time. Well, that, as a matter of fact,  
15 is obviously correct.  
16 Then this:  
17 "Risks of viral infection were discussed at the  
18 hospital clinic and at the annual patient meetings  
19 held in Craigavon Area Hospital each November."  
20 Those meetings I think are referenced by  
21 Dr Mayne in one of her other statements as well.  
22 Again, the evidence you have heard from individuals  
23 has been to the effect, in the vast majority of cases,  
24 that information about risks of non-A, non-B hepatitis  
25 was not shared with them, and so that will be an issue

181

1 So, again, maybe a tension between saying "As  
2 late as 1991 no-one really knew what to expect", and  
3 at the same time the broader point made in the  
4 HIV litigation report that the risks were well known  
5 to patients.  
6 Then finally for today I think, or at least in  
7 terms of the witness statements, WITN0736009.  
8 If we go to page 20, bottom half of the page,  
9 Dr Mayne says this in paragraph 22.1:  
10 "The possible transmission of viral hepatitis  
11 through blood transfusion, plasma infusion or the  
12 infusion of plasma derived products has been well  
13 known for a long time. I first learned of it as  
14 an undergraduate in the 1950s."  
15 Then there's reference to what was required for  
16 the MRCPATH and haematology and the requirement to  
17 spend time within the Blood Transfusion Service.  
18 She says:  
19 "During this time, in my case the topic of  
20 transmission induced infection was dealt with in  
21 detail."  
22 Then she refers also to there being post  
23 graduate courses and informal discussions with NIBTS  
24 and virologist colleagues.  
25 If we go further down the page:

183

1 that you will need to consider.  
2 Then just dealing still with this --  
3 **SIR BRIAN LANGSTAFF:** I don't quite see how the risks of  
4 viral infection could exist for the purposes of  
5 discussing it at the hospital clinic and at the annual  
6 patient meetings in Craigavon each November with the  
7 facts that in 1976 it was thought safe --  
8 **MS RICHARDS:** And there being --  
9 **SIR BRIAN LANGSTAFF:** -- deciding a very different period  
10 of time.  
11 **MS RICHARDS:** Yes. Yes, on the one hand: it's safe, few  
12 facts available. On the other: risks were discussed  
13 with patients. There is undoubtedly a tension between  
14 those two.  
15 If we go two pages further on in this  
16 statement, paragraph 6.2, Dr Mayne says this, picking  
17 it up towards the end of the first line:  
18 "... up until the Hepatitis C virus was  
19 identified in 1991 no one really knew what to expect.  
20 Gradually information evolved, different subtypes were  
21 identified and clinical symptoms of fatigue were more  
22 marked in some than others. Always I had an ominous  
23 feeling about the virus ..."  
24 And then she refers to a haemophilia weekend  
25 arranged in 1995.

182

1 "Between the late-1970s and the mid-1980s,  
2 there was increasing evidence that [non-A, non-B]  
3 hepatitis was not as benign as had been thought but  
4 could progress from chronic persistent hepatitis to  
5 cirrhosis. It is important to stress that it was  
6 an evolving picture."  
7 Then if we go a little further down the page to  
8 paragraph 24.1, she says:  
9 "I was aware that there was a higher prevalence  
10 of [non-A, non-B] infection associated with commercial  
11 concentrate compared to NHS concentrate but the latter  
12 also presented a significant risk of viral infection.  
13 An important factor in transmission is the potential  
14 size of the donor population in each category."  
15 Then, over the page, she says, in  
16 paragraph 26.1:  
17 "By 1972 my knowledge of the viral transmission  
18 of Hepatitis B and [non-A, non-B hepatitis] was  
19 incomplete as it was with all my colleagues.  
20 "Hepatitis B transmission remained a constant  
21 risk. Thankfully, in reality, in the haemophiliacs in  
22 Northern Ireland it was almost non-existent. To the  
23 best of my recollection only two sub-clinical cases  
24 were ever detected in Centre patients. However, it  
25 was necessary to maintain vigilant testing."

184

1 Then she refers to an article in the Ulster  
2 Medical Journal, which I'll go to in a moment, and  
3 says that that conflicts with her recollection.  
4 Then in 26.4 she says:  
5 "In respect of [non-A, non-B], the situation  
6 remained perplexing for almost twenty years. This was  
7 evidenced by the persistence of abnormal liver  
8 function in treated patients. Although one knew there  
9 was ongoing virological research on a worldwide basis,  
10 the lack of identification of a causative agent was  
11 a constant worry. Not all colleagues expressed  
12 an equal degree of concern. It was suggested that  
13 I stop testing if it was so upsetting. I took the  
14 opposite view and continued."  
15 Then she says in the next paragraph:  
16 "Gradually, knowledge progressed, liver  
17 histology was identified and in 1991 Hepatitis C was  
18 identified. It has proved to be a complex and deadly  
19 virus, possibly in keeping with its long prodromal  
20 phase."  
21 **SIR BRIAN LANGSTAFF:** Just focusing on those last few  
22 words, starting "possibly", this is a suggestion that  
23 where an infection has a very long period before  
24 symptoms are manifested, they're all the worse because  
25 of it?

185

1 article on hepatitis B incidence that she refers to in  
2 her witness statement, WITN3082021. It's an article  
3 headed "Hepatitis B virus infection in Northern  
4 Ireland 1970-1987". And I can pick it up in the  
5 "Summary":  
6 "In the 18 years between 1970 and 1987,  
7 504 patients were found to have hepatitis B surface  
8 antigen ... in their blood. Acute hepatitis was  
9 present in 184 patients and six died ... The annual  
10 incidence of acute hepatitis B virus infection in  
11 Northern Ireland was about one quarter that of England  
12 and Wales."  
13 Then if we go to the bottom of the page, we can  
14 see under the heading "Patients, materials and  
15 methods", that:  
16 "Testing for hepatitis B surface antigen began  
17 in the Regional Virus Laboratory in 1970 in blood  
18 donors required for the Renal Unit, Belfast City  
19 Hospital."  
20 Further information is then given about the  
21 testing process.  
22 If we go to the third page, we can see a table,  
23 "Categories of patients infected with hepatitis B  
24 virus".  
25 The second category is "Haemophiliacs", and we

187

1 **MS RICHARDS:** Yes.  
2 **SIR BRIAN LANGSTAFF:** Yes.  
3 **MS RICHARDS:** Just top of the next page, the report that  
4 we looked at a few minutes ago about hepatitis, you'll  
5 see what it is in paragraph 26.6, an extract from  
6 a medico-legal report that Dr Mayne wrote in 2000 or  
7 2001. So that's the document we looked at a moment  
8 ago.  
9 **SIR BRIAN LANGSTAFF:** That was the report for the HIV  
10 litigation, wasn't it?  
11 **MS RICHARDS:** No. There's the long report in italic text  
12 which is the HIV litigation report, but we looked  
13 a few minutes ago also at WITN0736011.  
14 **SIR BRIAN LANGSTAFF:** Ah, yes. That's the one you say was  
15 undated?  
16 **MS RICHARDS:** Yes. So that's that document.  
17 **SIR BRIAN LANGSTAFF:** That's that one.  
18 **MS RICHARDS:** That's been produced to the Inquiry by  
19 Dr Mayne, and she tells us in her witness statement  
20 it's an extract from a medico-legal report she wrote  
21 in 2000/2001, so it confirms authorship and gives us  
22 data or information about when it was produced.  
23 There are then just, I think before finishing  
24 today, two further documents on the issue of  
25 hepatitis. The first is the Ulster Medical Journal

186

1 can see there 11, that's the number with acute  
2 hepatitis. Deaths in brackets, so 1 fatality. And  
3 then there's also 8 who had received multiple  
4 transfusions, that would be non-haemophiliac  
5 transfusions.  
6 Then we go to the next page, halfway down  
7 there's a heading "Blood and blood products  
8 transmission", and we see the information relating to  
9 haemophiliacs:  
10 "Acute infections occurred in 11 patients  
11 between 1972 and 1982 after receiving blood  
12 transfusions, cryoprecipitate or factor VIII, and one  
13 patient died aged 51 years."  
14 Then there's reference to multiple  
15 transfusions:  
16 "Acute infections took place between 1970 and  
17 1980 in eight patients who had received multiple  
18 transfusions after surgery."  
19 So I think that's all one needs to look at in  
20 that article.  
21 Then finally WITN0198002, please. This is  
22 a letter from Dr Mayne in March 1984. If we look at  
23 the text of the letter, it provides information about  
24 a mildly affected haemophiliac, and we can see in the  
25 second paragraph Dr Mayne saying this:

188

1            "... a mild haemophilic of this type should be  
2 treated with cryoprecipitate or NHS factor VIII and  
3 not commercial freeze-dried factor VIII concentrates.  
4 This precaution is to avoid the development of non A  
5 non B hepatitis in mildly affected patients."

6            So a clear understanding of the risk of non-A,  
7 non-B being articulated in this letter in 1984.

8            Sir, those are the documents that throw some  
9 light on knowledge of risk of hepatitis amongst  
10 Belfast clinicians in general and Dr Mayne in  
11 particular.

12            Tomorrow I'm going to undertake a similar  
13 exercise in relation to knowledge of risk of HIV and  
14 then turn to consider the process of testing patients  
15 for HIV and then for hepatitis C, and patients being  
16 informed of their diagnosis, so the procedure that was  
17 adopted, and the adequacy or inadequacy of the  
18 information provided to them.

19 **SIR BRIAN LANGSTAFF:** Yes. Thank you very much.

20            Until 10.00.

21            10.00 tomorrow.

22 **(4.34 pm)**

23            **(Adjourned until 10.00 am the following day)**  
24  
25

<p><b>MS RICHARDS: [86]</b> 1/4 1/20 16/23 17/5 17/10 17/12 19/6 19/9 19/16 19/23 20/18 20/22 20/24 31/12 40/17 40/20 40/25 41/2 43/24 44/2 47/19 47/22 48/1 50/7 50/9 51/13 51/15 53/21 53/25 66/18 72/15 75/5 75/24 76/2 76/9 78/14 81/11 83/21 83/24 86/1 86/7 86/11 88/24 89/7 99/19 100/2 100/7 100/11 100/15 105/14 105/25 107/5 109/12 109/25 110/3 110/6 112/10 112/21 114/15 117/3 117/9 125/13 125/18 125/21 125/25 149/10 149/13 155/25 164/17 173/17 173/22 174/2 174/13 179/16 179/25 180/2 180/4 181/1 181/6 182/8 182/11 186/1 186/3 186/11 186/16 186/18</p> <p><b>SIR BRIAN LANGSTAFF: [86]</b> 1/3 1/19 16/21 17/1 17/6 17/11 18/20 19/8 19/13 19/18 20/16 20/21 20/23 31/10 40/15 40/18 40/21 41/1 43/21 43/25 47/8 47/20 47/25 50/3 50/8 51/7 51/14 53/18 66/17 72/10 75/3 75/23 75/25 76/8 78/13 81/10 83/19 83/22 85/24 86/2 86/9 88/22 89/6 99/17 99/23 100/5 100/10 100/14 105/12 105/21 107/2 109/3 109/22 110/1 110/5 112/5 112/17 114/14 116/24 117/5 125/1 125/15 125/19 125/22 149/5 149/12 155/20 164/16 173/14 173/19 174/1 174/12 179/15 179/21 180/1 180/3 180/22 181/4 182/3 182/9 185/21 186/2 186/9 186/14 186/17 189/19</p> <p><b>'70s [1]</b> 89/12</p>	<p><b>'74 [1]</b> 89/12 <b>'82 [2]</b> 24/22 176/10 <b>'82/'83 [1]</b> 176/10 <b>'83 [3]</b> 24/22 81/8 176/10 <b>'84 [4]</b> 81/8 84/13 100/5 103/10 <b>'84/'85 [1]</b> 84/13 <b>'85 [4]</b> 81/9 83/23 84/13 100/13 <b>'85/'86 [1]</b> 83/23 <b>'86 [1]</b> 83/23 <b>'87 [3]</b> 114/12 114/14 114/15 <b>'88 [2]</b> 100/13 114/20 <b>'89 [1]</b> 99/17 <b>'92 [1]</b> 20/23 <b>'all' [1]</b> 85/4 <b>'assessment' [1]</b> 95/1 <b>'B' [3]</b> 150/4 150/4 150/20 <b>'continuation [1]</b> 31/24 <b>'cryo' [1]</b> 41/17 <b>'cryoprecipitate' [1]</b> 29/22 <b>'Hemofil' [1]</b> 42/7 <b>'homologous [1]</b> 172/12 <b>'in [3]</b> 34/17 104/4 104/18 <b>'insoluble' [1]</b> 13/5 <b>'non [1]</b> 173/12 <b>'non-A [1]</b> 173/12 <b>'one [1]</b> 54/18 <b>'other [1]</b> 101/7 <b>'PE [1]</b> 120/22 <b>'put [1]</b> 170/12 <b>'the [1]</b> 12/2 <b>'This [1]</b> 137/2 <b>'users' [1]</b> 95/18</p> <p>.</p> <p><b>...
