Dear Liz

Re: Hayley Jane Bartlett, **GRO-C**

Case Record No: **GRO-C** dob: **GRO-C** 67

Problem: Hepatitis C Lookback

This lady was given a platelet transfusion in 1991 which is now known to have come from a donor who has tested positive for antibodies against Hepatitis C. I am not sure how often you are reviewing this lady, and whether you wish to undertake the necessary testing and counselling yourself, or if you would like me to see the person. I would be most grateful if you could advise me accordingly. If you undertake the testing yourself it is important that the sample is sent to the University Hospital of Wales for PCR testing and it would assist administrative procedures if the enclosed form could be used. The sample should be received within 24 hours of being taken and kept at ambient temperature.

I am most grateful for your help yet again.

Best wishes.

Yours sincerely

GRO-C
