Dear Fiona

RE: **S** - **DOB** **GRO-B/71**
(Permanent Address) **GRO-B**
(Temporary Resident) **GRO-B**

Diagnosis: 1. Haemophilia
2. Hepatitis C

As we discussed with Dr Walker, I ^{wish} ~~wrote~~ to transfer this moderately severe Haemophiliac (Factor VIII 10iu/dl) from human factor (Liberate) to Recombinant Factor VIII (Recombinate) this week, while he is in Glasgow. He is temporarily resident in **GRO-B** so I'm copying this letter to Dr Taylor, Haemophilia Director at Inverness, for his information.

S is a priority patient for transfer to Recombinant according to national criteria, and now we have national funding, I am keen to transfer him as he has had some major knee and buttock bleeds recently. He will keep some home treatment in his hotel, and some at **GRO-B**. I'd be grateful if we could transfer further Recombinant Factor VIII there, should he be unable to collect it from here. Kind regards.

Yours sincerely

G D O LOWE
