Consultant: Dr Maysam Musgrave

Dear Mrs **GRO-B**

(I have since seen you in stonehouse on the 27/05/05 , however this letter touches on what we have discussed on the day)

You may recall I saw you at Stonehouse clinic. I had organised a few blood tests, and one of the blood tests picked up on the possibility that you may have hepatitis infection. Often, we repeat these tests in the first instance, to ensure that it wasn't a false report.

On the other hand, if indeed this is positive, it would explain the rash on your lower legs, as well as the ongoing ulceration and the numbness you are experiencing, and hence would tie all the symptoms together. I tried to contact you on the phone today (7th May 2014), but was unsuccessful.

Also, I have taken the liberty to refer you to one of our hepatologists, who deals with these viral infections, and may be able to offer you some treatment, which may well be long-term. I hope this is helpful; if you have any queries, please don't hesitate to contact our department, and I will be happy to speak to you.

Yours sincerely

Dr Maysam Musgrave  
Locum Consultant in Rheumatology
