Consultant: Dr Maysam A Musgrave

Stonehouse Clinic

Dear Dr **GRO-B**

Patient Name: **GRO-B**
Patient date of birth: **GRO-B** 1941
Patient Address: **GRO-B** Glasgow, **GRO-B**

Current Issues: Hepatitis C positive
Positive cryoglobulins

Past Medical History: High grade T-cell lymphoma 1980s
IgM paraprotein (MGUS) 2011
Axonal sensorimotor peripheral neuropathy on nerve conduction tests –
January 2013

Mr **GRO-B** attended today with her son. She was only discharged from Hairmyres last Friday with infected vasculitic ulcers. Her appointment today was merely to discuss recent events regarding positive hepatitis C and positive cryoglobulins. It is likely that the rash and ulcers are secondary to cryoglobulinaemia. I have referred her to the gastro-enterologists for their assessment. She recalls having an infusion following the birth of her first son 43 years ago and a possible needle stick injury. She has also had a blood transfusion when she was diagnosed with lymphoma in the 1980s.

In any case her ongoing management is based on targeting her hepatitis C and I have explained this to her today. I will arrange a return appointment for 4-5 months to ensure she has not slipped through the net. As she has had recent blood tests I haven't repeated her bloods today.

Yours sincerely

Dr Maysam Musgrave
Locum Consultant in Rheumatology
